The Hoosac Tunnel.--Governor Andrew's Decision.

THE MASSACHUSETTS LOAN TO THE TROY AND GREENFIELD RAILROAD COMPANY: DUTY OF COMPANY BEFORE BEING ENTITLED TO THE STATE SCRIP: PROVINCE OF THE STATE ENGINEER: CHARACTER OF THE ROAD TO BE BUILT: SECURITY OF THE STATE.

We have before us the very able decision of Governor Andrew of Massachusetts, relative to the State loan to the Troy and Greenfield Railroad Company, in order to enable them to cut a tunnel through the Hoosac Mountain. This enterprise, like many other great enterprises of doubtful issue, has received most of its support from the State authorities. The grandeur of the achievement, however great, would not sell the stock in market, or add one per cent. to its value, and hence the assistance of government was sought by those at the head of the enterprise; and in 1860 a law was passed by the Massachusetts Legislature, authorizing a loan of $650,000, in state credit or scrip to enable the company to construct the tunnel. The terms and conditions of the loan will be understood by the following section of the statute:

SECTION 3. The governor and council shall annually appoint a State engineer for the purpose of examining and determining monthly the amount and value of the work done and materials delivered on the railroad and tunnel of the Troy and Greenfield Railroad Company, who shall receive an annual salary of one thousand dollars, payable quarterly. The State engineer shall forthwith fix permanent marks in each end of the Hoosac Tunnel, marking the progress of the work up to February twenty-fourth, eighteen hundred and sixty, from which to determine the progress subsequently made. He shall also determine by suitable notes, marks, or observations, the amount and value of all grading, bridging, masonry or other work done, or iron or other materials delivered, on the road east of the Hoosac Tunnel prior to December twenty-second, eighteen hundred and fifty-nine, and fix data from which to determine the value of any work or materials delivered subsequent to the date last named. He shall monthly, immediately after the first day of each month, estimate the proportion which the work done upon the road since the preceding estimate bears to the whole of the work required to be done in the graduation, masonry, bridging and superstructure of said railroad east of the Hoosac Tunnel, and also the work done in the excavation of said tunnel, which he shall certify separately to the governor, together with the amount of State scrip to which the company is entitled under the provisions of this act. Such monthly estimates shall be based upon the width of road-bed at grade of fifteen feet on embankments, seventeen and a half feet in side cuts, and twenty feet in thorough cuts; in the heading of the tunnel upon dimensions fourteen feet wide and six feet high in the middle, and in the finished excavation of the tunnel of fourteen feet wide and eighteen feet high in the middle.

The deliveries of scrip shall be at the rate of fifty dollars for each lineal foot of tunnel, dividing between heading and full sized tunnel, in proportion of thirty dollars for each lineal foot of heading and twenty dollars per lineal foot for the remaining excavation; and of six hundred and fifty thousand dollars for the whole of the graduation, masonry, bridging and superstructure of the unfinished portion of the road east of the tunnel.

The scrip shall be delivered on the road in the proportion which the value of the work done and the materials delivered each month bears to the estimated cost of the whole work and materials required on the portion of the road aforesaid.

No expenditures shall be required merely for the purpose of ornament, but the work shall be substantially performed, and the rails shall weigh not less than fifty-six pounds to the lineal yard; for any defective materials or work a proportional amount of scrip shall be withheld.

The governor and council shall have a general supervision of the work, and for that purpose shall visit and inspect the same at least once in each year, and as much oftener as they may deem expedient; and they shall have power to correct abuses, remedy defects, and enforce requirements, by withholding scrip or imposing new requirements in such manner as the interest of the Commonwealth shall in their judgment require.

If the governor upon the receipt of the monthly estimates and certificates of the State engineer shall approve thereof, he shall transmit the same and his approval thereof to the State treasurer, and the State treasurer shall thereupon deliver the amount of scrip so certified for to the treasurer of the Troy and Greenfield Railroad Company or to his order, subject to the provisions hereafter mentioned. If he shall not approve thereof he shall submit the same to the council, and their approval transmitted to the State treasurer as aforesaid, shall authorize such delivery.

Having obtained this loan the company contracted with Messrs. Haupt & Co., to build the road and cut through the tunnel. Col. Ezra Lincoln, the State Engineer first appointed, in his official capacity, established certain conditions, estimates and prices on which the instalments were to be paid to the company; and the work for a time proceeded, Mr. Lincoln giving his certificate as required by the statute. Subsequently Mr. Whitwell was appointed State Engineer in the place of Mr. Lincoln. The character of the work done by the company not coming up to his standard he refused to give the certificate made requisite by the statute, before an instalment could be paid. The company, however maintained that the conditions, estimates and prices established by Mr. Lincoln were assented to by them, and became the basis on which the sub-contracts for the building of the road were founded, and therefore, the same conditions were binding upon the Commonwealth.

It will be remembered that the statute confers power upon the Governor and council, to supervise the work, "to correct abuses, remedy the defects," &c.; and the company appealed to the Governor and council, and asked an order compelling the engineer to rivise his estimates, and to submit such additional estimates as would be necessary to increase the amount already paid, to the amount which would have been paid had his original estimates been bassed upon the conditions, estimates and prices established by Colonel Lincoln.

The Governor obtained the opinion of the Attorney General, the Hon. DWIGHT FOSTER, upon the construction of the act of 1860, under which the loan was granted to the company. After quoting section third, the Attorney General says:

"This law contemplates a loan by the State to a railroad company in aid of an enterprise of public utility. The State does not undertake to build the railroad, or determine in what precise manner it shall be constructed. Nor has the State under the act anything to do with the contractors whom the corporation may chose to employ. The sole object of providing for the appointment of a State Engineer is to protect the interests of the State by ascertaining, before any particular instalment of the loan is paid, that the work has so far advanced and is of such a substantial character as to furnish adequate security for the investment, and that the fractions of the entire loan, paid monthly, bear such proportion to the monthly progress of the road that the full amount will be advanced when, and not before the entire road east of the tunnel is completed in a substantial manner.

Each month the Engineer is to estimate the proportion which the work done upon the road since the preceding estimate, bears to the whole of the work required to be done; and the monthly deliveries of State scrip are to be made in the proportion which the work done and materials furnished each month bears to the estimated cost of the whole work and materials required on the portion of the railroad east of the Tunnel. For any defective material or work a proportionate amount of scrip shall be withheld.

Obviously the Engineer must determine whether the work has been substantially performed, and whether any materials or work are defective. But he does this only incidentally, to ensure a railroad of such character as will give the State adequate security for its monthly advances, and by no means for the purpose of finally accepting any part of the work in behalf of the State. Still less is he empowered to make a contract with reference to the character of the entire road, which can in any way bind the future action of the State, of his successors, or even of himself. The only contract of the State is to be found in the statute. He is not to wait till a particular portion of the work is completed before he awards upon it an issue of scrip, but the loan is to be advanced upon unfinished work as well as finished.

If any work has been treated as substantially performed, either by the former or its present Engineer, and is subsequently ascertained to be defective and not substantially performed, it is the duty of the Engineer to withhold a proportionate amount of the scrip; and in my opinion it can make no difference whether a latent defect in the work or materials has been discovered, or whether a mistake of the Engineer has caused too much to be advanced at any former period. Of course previous advances cannot be recalled, but each month's estimate requires the Engineer to determine how much remains to be done to complete the entire road in a substantial manner, and then he certifies that the corporation is entitled to the issue of such an amount of scrip as the cost and value of the work done and materials furnished in a given month, bears to the cost and value of all remaining to be done and furnished.

All this he must do upon his professional and official responsibility, in the discreet and conscientious exercise of his personal skill and judgment.

It is no more competent to the Governor and Council to instruct the State Engineer what he shall treat as substantial work and substantial materials, than to direct any other public officer clothed with a trust how he must decide and act within the sphere of his official duties. The supervision given to the Governor and Council, and the power to correct abuses and enforce requirements, is designed as an additional safeguard against the improvident issue of too large portions of the loan, but by no means to enable them to issue greater amounts than the Engineer certifies to be due. And they can no more order him what certificate to make than they can order any other public officer to come to a conclusion contrary to his own judgment in a matter in which that judgment is by law supreme.

The remedy, if he commits errors, or is guilty of arbitrary conduct, is to be found in his removal from office, or on application to the legislature for redress.

The question, what constitutes a substantially built road, such as the law demands, is one addressed purely to him as an Engineer; and he ought to require a road ordinarily well built, according to the existing standard of good work in similar locations, constructed by competent engineers at the present day. With the question, whether such a railroad will cost more or less than six hundred and fifty thousand dollars, the State Engineer has nothing to do. The State has agreed to lend that sum upon such a road in monthly installments, proportioned to the progress of its construction. It is his duty to make each monthly estimate on these principles. And if in former months he or his predecessors have been too liberal, or not liberal enough in estimating the work,

he must nevertheless now make the following inquiries:—

How much remains to be done and furnished in order to complete this railroad substantially, and what will it cost?

How much has been done and furnished during the last month for which I am now making an estimate, and what has it cost?

How much of the State loan remains to be advanced?

A proposition stated on these principles will ascertain the amount of the monthly issue for which the Engineer is to make his certificate.

The particular questions which have been made as to details are, with one exception, matters of engineering and not of law.

I am of opinion, however, as a matter of law, that this portion of the railroad cannot be considered by the State Engineer as finished so long as anything remains to be done upon it which the railroad company has required to be done by the contractors.

The statute speaks of the whole of the work required to be done in the graduation, masonry, bridging and superstructure of the railroad east of the Hoosac Tunnel. The existing contract between the Troy and Greenfield Railroad Company and the parties who have undertaken to build the road contains the following stipulations: "If any trestlework or temporary bridging should be used in the construction of the road, this also shall be changed by and at the cost of the contractors, and replaced by permanent structures as soon as practicable after the completion and opening of the whole line."

Certainly as between the corporation and the contractors, the latter cannot claim that the portion of the road east of the Tunnel is finished until such permanent structures have been supplied; and I do not think the State Engineer at liberty to treat this portion of the road as completed for the purposes of the loan so long as any part of the work remains undone which the corporation requires of its contractors as a part of their contract of construction.

My opinion upon some of the questions which I have thus considered, was asked by the State Engineer in a communication received from him in July, which at the request of your Excellency I herewith inclose. I thereupon wrote a note to Herman Haupt, Esq., on the subject, which, with his reply, I also inclose. The substance of the answer received from him was by my clerk communicated to the State Engineer, and in consequence of it I did not prepare the opinion which had been called for, as it no longer seemed of immediate importance to either party during the suspension of work by the contractors. I had shortly afterwards an interview with Mr. Haupt at my office for the purpose of ascertaining his views on the different topics upon which my opinion had been desired, in order that I might not fail to consider all the aspects favorable to him of a subject in which he was deeply interested.

I have never seen any paper and am not aware of the existence of any purporting to establish a basis of estimates, conditions, or prices which should govern the contractors and determine the quality of the work upon the road which was agreed to be received as satisfactory by any of the State Engineers. And I have already expressed the opinion, that no State Engineer could establish either on behalf of the Commonwealth, or the Railroad Corporation, any such standard, or determine anything beyond the simple question, how much of the loan the corporation was legally entitled to receive for the work done and materials furnished during each month singly, and that there neither is nor can be any contract binding the Commonwealth in the premises except the one contained in the statute."

The Governor then expresses his own concurrence in the view of the law, taken by the Attorney General; and discusses the points involved in his own decision; and reviews the difficulties under which the work at present labors, quoting the following from a published letter written by Mr. Haupt to Mr. Whitwell:

"To enable the contractors to resume and complete the work, the following, or some equivalent arrangements would be necessary.

"1. The payment of the balance of the $650,000 appropriated by the State to the completion of the road, without reducing the amount by any further payments on account of interest or sinking fund.

"2. The delivery of the scrip of the towns when the conditions of the town votes shall have been substantially complied with, and some guarantee that this will be done.

"3. The Cutlery Manufacturing Company at Shelburne Falls, who are more interested in the completion of the road than all other parties between Greenfield and the Tunnel, should pay their subscription in cash, or negotiable paper, and look to the railroad company for payment of their claims for land damages and services.

"4. Land owners should wait until the road is completed and then collect their awards with interest from the railroad company, not from contractors.

"If in addition to this the Fitchburg and Vermont and Massachusetts Railroad Companies, or the Connecticut River Railroad Company, or any other parties would advance, say $50,000 as a loan, to be reimbursed by appropriating the whole of the receipts of the road over working expenses, until the same shall be repaid, a sufficient amount could thus be provided to resume work on the tunnel and complete the railroad."

The Governor also refers to the depreciation of Massachusetts scrip, stated by Mr. Haupt to have fallen in the European market from one hundred and ten cents on the dollar, to between eighty and ninety cents; and concludes as follows:

All these difficulties accumulated in the present, or threatening in the immediate future, lead me to the very strong belief that nothing short of legislation, or a rallying of the pockets of the people, will save the enterprise. I very heartily regret the possibility of injury to the work by its being left in its present predicament; that the corporation to which the State has loaned its money is so poor that it is wholly dependent upon the State for the means to save the embankments of the road from injury by the freshets of the Deerfield River and the frosts of spring. And if there is any method open to us by which we can prevent such injury, I certainly shall unite with every one in putting that method into the earilest possible operation. I do not see why the raliroad corporation, which alone has power to act—we have the power only to issue scrip, and that *sub conditione*—may not intervene and go on with the work, if we will issue scrip to pay for it, and protect these embankments by rip-rapping, or other necessary process. If they will not proceed, we have no power to compel them to proceed, nor do I know that the State has any power to enter upon the road, excepting for condition broken in the mortgage by which the road is pledged to the State to secure its loans. If the State is obliged to enter for condition broken, I suppose then it is open to the Commonwealth to proceed according to its own judgment of its own interests; but the question whether the governor and council would have any power to proceed is an inquiry I have not considered. I should, of course, with great readiness, if the power is open to us, co-operate in whatever is necessary for the purpose of saving the property and saving the enterprise itself from loss. I greatly fear, however, that possibly nothing remains, unless the railroad corporation itself will proceed to protect the embankments and allow us to issue scrip to pay for the expense it may involve, except to await the action of the legislature. I need not repeat the expression of the regret I feel that the legislature is not now here to do its own appropriate work.

This question, I am very happy to know—and, under the heavy weight of responsibility which is imposed upon me, it gives me great consolation to know—does not at all effect the grand enterprise of tunnelling the mountain; nor do any opinions, whether of engineers or others—certainly, no opinions of mine—relate to, bear upon, or prejudice, any judgment in relation to the ultimate completion of that enterprise. The Commonwealth itself seems to have repeatedly expressed its confidence in its feasibility, its propriety, and its usefulness; and since I always endeavor to make it a rule to have no opinions—certainly to express no opinions—upon subjects which I do not understand, far be it from me to express doubts of the correctness of the opinions of any who on intelligent and scientific examination entertain a conviction of its ultimate success. Certainly, it is one which challenges admiration, and which every ardent and aspiring citizen—every ardent man at least—would strive to believe in and desire to realize; and if it is the opinion of those who direct the legislation of the State that the Commonwealth ought to take it in hand, in the absence of its being taken up by private capital, the time is not far off when the general court will be sitting in the State House, and in the proper exercise of its peculiar functions can do what our powers fail to authorize. * * * * * * *

The results of my own reflection and observation are as follows:—

First.—That the order reported by the Committee is legally inadmissible. The Engineer is clothed with a trust which he must fulfil according to his own conscience and intelligence, and he cannot be directed by us what to report.

Second.—The object aimed at by the Committee can be accomplished only by the removal of the Engineer, and the appointment of another one known in advance to favor the views of Mr. Haupt and not those of Mr. Whitwell.

Third.—This can only be done by the Governor taking the initiative in the exercise of the power of removal and appointment. And before I can rightly exert this power I ought to be convinced that Mr. Whitwell is wrong and Mr. Haupt is right.

Fourth.—But the proofs drawn from the opinions and testimony of experts, in the application of engineering science to the construction of railways, clearly demonstrate that Mr. Whitwell has only followed well established general rules of his profession. Nor is it proved that any reasons exist rendering this road an exception to those rules.

Fifth.—It is urged that Mr. Haupt has constructed this road consulting all possible economy of construction consistent with despatch in putting it into operation, expecting to perfect its details out of earnings thereby to be secured. While of this course on his part we have no right to complain, so long as it meets the approval of the railway company who employed him, yet the issue of State scrip is regulated by the *statute*, and not by any such policy or convenience.

It is not for us to ask, how, by any economy, $650,000 can be so distributed as to build a road capable of use? But we are to issue scrip simply on the strength of what is actually done and accomplished in a thorough, substantial and workmanlike manner.

Bedford Railroad.

This road begins at Hopewell, where the Huntingdon and Broad Top Railroad terminates, 31 miles from the Pennsylvania Railroad at Huntingdon, and ends at Bedford, 20 miles from Hopewell and 51 miles from Huntingdon. About 9 miles of the Bedford Railroad are graded; these 9 miles are to be trimmed up and three additional miles are to be graded inside of 90 days; so that the superstructure can be put down on 12 miles, and the road opened that distance by the 1st of Feb'y next. These twelve miles will carry the rail line from Huntingdon to one mile west of Bloody Run and to eight miles of Bedford; and as Bedford is the seat of justice of an old county, and a fashionable watering-place besides, ways and means will doubtless be devised to extend the rail line to that ancient borough.

From Bedford west, another link twenty-two miles long will carry a rail line to the extreme north-eastern angle of the Pittsburg and Connellsville Railroad at Wills' Creek, whereby via Bedford there would be established between Hunting-

don on the Juniata and Cumberland on the Potomac, a direct and continuous rail communication. And all this (and more) will be compassed, we have no doubt, before Bedford is content, for it is a laudable ambition in a county town to strive after railroad facilities.

That portion of the Bedford road now soon to be put into operation, runs through an iron region celebrated for hematite and fossile ores, which it is said abound near the line of the road; hitherto these ores have been hauled to Lemnos and Bedford forges, a distance of 12 miles.

Bedford, it seems to us, may yet succeed in making herself a point on a South Pennsylvania rail route between Harrisburg and Wheeling; indeed this she will accomplish via Huntingdon and Cumberland so soon as the distance between Bloody Run and Wills' Creek is covered with iron rails; but a more direct route, and the one to which we more particularly allude, will be secured by a connection of the Pittsburg and Connellsville Railroad with the Cumberland Valley Railroad; and the former of these two roads with the Hempfield road, now in use from Wheeling to Washington.

Wheeling is the capital of the new State of Kanawha; and the Pan Handle and Cape Henry extremities of old Virginia are certainly very far apart in the war for a boundary line. In truth, it is not probable that Wheeling and Norfolk will very soon again confess themselves constituent parts of one Commonwealth; hence Wheeling, since her interests are now cast with Pennsylvania, will naturally urge the construction of such links of iron line as will give her communication with the seaboard cities north of the Chesapeake; and as the interests of the counties of Southwestern Pennsylvania in this matter are identical with the interests of Wheeling, it will be strange indeed if, in the progress of events and in the fluctuations in the tide of circumstances, "something" does not "turn up" which will serve as a basis for operations in a plan for a South Pennsylvania Railroad from Harrisburg to Wheeling, via the valley of Cumberland and of the Youghiogheny. Or, if this involve too large outlay, then via Huntingdon, Bedford, Bridgeport, Connellsville and Washington. We confess a belief that close upon the completion of the Pittsburg and Connellsville road to Wills' Creek, will follow the construction of a connecting link between it and some one of the roads now terminating in the Pennsylvania Railroad.—*U. S. R. R. & Mining Register.*

OFFICE OF THE NEW YORK CENTRAL R. R. Co.,
Albany, November 1, 1861.

THE annual election for Directors of this Company, and for three Inspectors of the next election, will be held at the Office of the Company, in the Exchange, in the city of Albany, on the second Wednesday (the eleventh,) of December next. The poll will be opened at eleven o'clock in the forenoon, and will continue open for two hours thereafter. By order of the Board of Directors.

JOHN V. L. PRUYN,
Secretary *pro tem.*

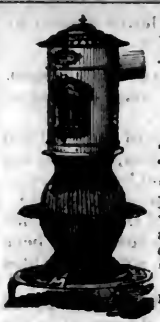
Railroad Supply Store
FOR SALE.

ONE of the oldest and best established Railroad Supply Stores, may be had very low, the present proprietors having other business requiring their whole attention. Address Wm. Kemlo, 34 Hawley st., Boston, or Box 1487, New York Post Office. 2t*

LOCOMOTIVES FOR SALE.



THE Boston and Maine Railroad Company have for sale three second hand Locomotives of the following specification and description.

They all have outside cylinders and connections. Cylinders 15x20, four driving wheels, 4 ft. 6 in. diameter, diameter of boiler, 43 in. No. of tubes, 127; length of tubes, 10 ft.; diameter of do., 1¾ in.; weight of engines, about 24 tons each; capacity of tank on tender, 1,500 gall.

The above Locomotives are all in good working order, and are offered for sale on account of the Company having purchased several locomotives of greater capacity. Parties in want of a good machine can have now an opportunity to purchase at a reasonable rate. Application may be made at the office in Haymarket Square, Boston.

WILLIAM MERRITT Sup't.

Boston, Nov. 24, 1860. 1f

SANFORD'S MAMMOTH OR GLOBE HEATERS.

The best stoves for RAILROAD DEPOTS and SHOPS, and all places where a great heat is required. They are very durable, and very economical of coal.

Beware of imitations that are inferior in strength and in other respects.

TESTIMONIALS.

HUDSON RIVER RAILROAD OFFICE, N. Y.

This Company have now in use, over two hundred of Sanford's Mammoth Heaters, in Station Houses, Work Shops, and Engine Houses; we commenced using them in 1853, and some of the first stoves put up are still good and in use. We consider them the best Heaters now in use.

J. M. HEBARD, Supply Agent.

UNION FERRY COMPANY.

The Mammoth Heaters have been used by this Company in their waiting rooms at the several ferries and found to be very excellent stoves and more durable and valuable than any heretofore used. CYRUS P. SMITH, Managing Director.

Nos. 239 and 241 Water st., N. Y.

Challenge Air-tight KITCHEN RANGES,

May be placed in a fire-place without masonry, and with or without water-back; or may be set out on feet, as an ordinary stove.

This range, already very popular, has the **LARGEST OVENS** of any in the market; BAKES PERFECTLY, never failing to brown at the bottom; BOILS, ROASTS and and BROILS with unequalled facility and dispatch, and with extraordinary **ECONOMY OF FUEL**, which may be either coal or wood. Flues large and easily cleaned. A child can manage it, so simple is its construction. Castings extra heavy, and design plain and chaste.

Four sizes, adapted to families and hotels.

Beacon Light SUMMER AND WINTER PORTABLE RANGE,

Is a very popular range, having six boiler holes, one large oven that bakes perfectly, with an arrangement for roasting, or heating irons at the end. It is very economical of fuel. For a FEW DOLLARS a family may be supplied with a PERFECT COOKING APPARATUS, equal to the highest price stove in the market.

Three sizes, adapted to coal, or wood.

SANFORD, TRUSLOW & CO.,
239 and 241 Water st., N. Y.

HEAD QUARTERS, WESTERN DEPARTMENT,
St. Louis, Mo., August 23, 1861.

To Presidents and Superintendents of Railroads, Western Department, United States Army.

THE following is the basis established by the Government for the transportation of troops and supplies for the army:—

Per Passenger per mile (2) two cents for distances moved.

Equipments, munitions and supplies accompanying regiments, first class local rates, which will average about as follows:

30 miles or less			10	cents	per 100 pounds.
50	"	"	15	"	"
100	"	"	25	"	"
150	"	"	40	"	"
200	"	"	50	"	"
300	"	"	75	"	"
350 to 400 miles not exceeding			90	"	"

For transportation of Horses in small lots, the following are the usual estimated weights of Railroad Companies:

Single animals	3,000	pounds.
2 animals	4,000	"
3 "	5,000	"
4 horses	6,500	"
5 "	8,000	"
6 "	9,000	"
7 "	10,000	"
8 "	11,001	"
9 "	12,000	"

Full car loads, 13 or 14 horses, usually charged 18,000 lbs. All other supplies forwarded by Freight Trains are charged local rates, according to classification of property which will usually average, on provisions and heavy freight, two to three cents per ton of 2,000 lbs. per mile.

Fast freights, immediate transportation, and precedence given to the Government in all cases.

All despatches required by the Government, to be furnished at the actual running cost.

E. H. CASTLE,
Supervisor Railroads, Western Department.

American Railroad Journal.

New York, Saturday, November 16, 1861.

Louisville and Nashville Railroad.

We have received a copy of the last annual report of this company. The time for closing the fiscal year has been changed from September 1st, to July 1st; the report therefore covers a period of only ten months, during which time the receipts have been as follows:

	Memphis Branch. 46 miles.	Lebanon Branch. 37 miles.	Main Stem. 185 miles.
From pass'g'rs.	$23,013 76	$17,570 23	$296,254 53
" freight..	10,788 67	16,697 80	401,547 39
" mails...	1,970 91	2,812 50	16,125 00
" express.	.....	2,784 65	18,597 73
" rent, etc.	.....	17 25	754 25
Total main stem			$732,279 90
" Lebanon branch			39,882 43
" Memphis "			35,773 34

Total main line and branches—

From passengers	$335,838 52
" freight	429,033 86
" mail	20,908 41
" express	21,382 38
" rent, etc.	771 50
	$807,934 67

And the expenses have been:

Conducting transportation	$69,503 16
Maintenance of way	39,753 04
" buildings.	1,495 18
" machinery	26,894 85
" mot. pow'r	48,210 29
General expenses	5,938 58
	345,964 25
Leaving net revenue	$461,970 42

—being 57.18 per cent. of the gross revenue.

The following table will show the earnings and expenses as distributed *pro rata* to the number of miles of road for freight and passengers, and also to the mileage of trains of various classes:

	Miles run.	Total earnings.	Earnings per mile of road.	Earnings per mile run.
Revenue:				
Main Stem—passenger trains	229,818	$329,977 26	$1,783 26	$1.43.5
" freight	163,191	401,547 39	2,170 53	2.46.6
Lebanon Br.—passenger trains	19,120	$23,167 38	$628 15	$1.21.2
" freight	19,531	16,697 80	451 29	0.85.4
Memphis Br.—passenger trains	27,662	$21,984 67	$543 14	$0.90.3
" freight	19,392	10,788 67	234 54	0.55.6
Totals	478,714	$807,163 17	$8,011 49	Av. $1.68.6
	47,054			
	38,651	$39,865 18	$1,077 44	Av. $1.03.1
	393,009	$731,524 65	$3,954 19	Av. $1.86.1
Expenses:				
Passenger trains	276,600	$154,169 15	$777 68	Av. $0.76.0
Freight "	202,114	191,795 10	946	$0.94.4
	478,714	$345,964 25		Av. $0.70.7

During the ten months, the business of which is exhibited by these tables, the sources of revenue have been so different from those of the previous year, that the table of classified articles has been omitted, and a table given instead embracing the business for eight months from November 1, 1860, to June 30, 1861, showing the revenue from freights forwarded and received at each station on the main line and branches. From an analysis of this table, it appears that the principal part of the revenue has been from freights transported southward. Thus, of the business of the Louisville station for the time named, there was derived—

From freights forwarded southward	$252,190 71
From freights received	51,713 73
Excess of freight forwarded	$200,476 98

—or 83 per cent. of the whole amount.

The business of Nashville station exhibits the same difference. The revenue derived from freight business at that station was as follows:

From freights received	$201,245 40
From freights forwarded	14,343 43
Excess of freights received	$186,901 97

—or 93.4 per cent. of the whole amount.

Of the through business proper, between Louisville and Nashville, 95 per cent. of the revenue was from freights at Nashville, and only 5 per cent. from that forwarded or originating at Nashville. Hence of every 100 cars loaded at Louisville for Nashville, 95 were returned empty; that is, the company performed 95 per cent. of the train service northward for through business, or 47½ per cent. of the whole, without any compensation. At many local stations, also, the revenue from freights received is in excess of that from freights forwarded; whereas, in years of average crop the revenue from transporting the produce of the country would be many times that arising from transporting merchandise and other articles for consumption. This has arisen from the failure of crop in 1860 on the line of the road, and in the States south, which received their supplies over the road. There was not only no surplus to send to market, but large quantities of flour and provisions were sent from Louisville to supply the want of these articles.

A comparison of the passenger business with that of the preceding year, exhibits an increase of 7,770 in the number of through passengers, and a decrease of 12,027 in the number of local passengers during the ten months. In the mileage of passengers, local and through, there has been an increase of 694,990; in the average distance traveled by each passenger, an increase of 5.9 miles; in the revenue per passenger carried an increase of 17.3 cents; in the revenue per passenger per mile, an increase of .4 of a cent; and in the total revenue from passengers, an increase of $22,674 45. The number of local passengers carried was 130,669; of through passengers, 25,040; total mileage of passengers, 9,338,396.

The equipment of the road consists of 38 locomotives; 22 passenger, 9 baggage, 9 caboose, 165 box, 18 rack, 10 gondolas, 104 flat and 5 boarding cars.

The track of the Memphis Branch was completed about the 18th of September. 1860, and on the 24th of that month regular trains were placed upon the road running between Bowling Green, Ky., and Clarksville, Tenn., the Memphis, Clarksville and Louisville Railroad Company paying their proportion of the expense.

The track of the Memphis, Clarksville and Louisville railroad was completed, except the bridge over Tennessee river about the 10th of April last. In anticipation of a large passenger traffic between Louisville and Memphis, the regular passenger trains which had been run regularly into Nashville, were transferred to the branch road, this company continuing to operate the trains as far as Clarksville; and two trains to connect with the through trains at Bowling Green were put on the main road between that point and Nashville. This arrangement was commenced April 14th, and continued until the close of the fiscal year.

The report of A. FINK, Esq., Superintendent of Machinery and Road Department, is accompanied by various tables exhibiting in detail the expenditures for the ten months under appropriate heads; also a table containing a revised estimate of the cost of fully completing the Main Stem and Lebanon Branch, and an estimate of the cost of completing the Memphis Branch. The following are the footings:

	Estimated Cost Sept. 1, 1860.	Expended from Sep. 1, 1860 to July 1, 1861.	To be expended after July 1, 1861.
Main Stem	$699,500	$86,185	$613,315
Lebanon Br....	63,000	129	62,871
Memphis Br.		.....	130,000
	$762,500	$86,314	$806,186

The expenditures in constructing the Main Stem, have been as follows:

The first and second year's expenditures, to the 1st Oct., 1853, were $115,861 85

There are no reports on file in the office, for the two succeeding years.

The 5th year to Oct. 1st,	1856	$1,467,260	26
" 6th "	" 1857	2,289,150	19
" 7th "	" 1859	3,834,890	07
" 8th "	" 1859	6,127,292	15
" 9th "	" 1860	6,674,248	53
" 10th "	July 1st, 1861	6,609,056	70

The net earnings of the road, up to the 1st of January, 1860, were credited to interest and discount, and interest and discount charged to construction; and since that date the interest on the debt the company owes has been paid out of the net earnings, and the surplus has been credited to interest and discount. The total amount so credited is $660,899 37, leaving the whole cost of the road on the 1st of July, 1861, $6,609,056 70. The report says:

It will be seen by reference to the Secretary's consolidated statement, that the stock and stock liabilities of the Main Stem, and Lebanon and Memphis Branches, to the first of July, is $5,631,469 65; and the bonded debt, $3,260,500 00; and floating debt $348,076 24. Total cost of road and branches, to date, $8,695,332 22; resources, $586,651 91.

A Fink's estimate for fully completing the Main Stem and both Branches, is $806,185 85.

By the annual report to 1st October, 1860, there had been expended on the construction of the Main Line, including equipment, the sum of $6,674,248 53; on the Lebanon Branch, without equipment, the sum of $1,007,736 18; and on the Memphis Branch, and equipment, the sum of $848,733 49.

The sum expended on the Main Line since 1st October, 1860, and interest on Co. st'k b'ds, payable in st'k, is	$155,349	54
On the Lebanon Branch	19,062	16
" Memphis "	209,843	74
Making in all the sum of.....	$385,155	44

It will be seen that there is a discrepancy between the Secretary's report of construction account of Main Line, and Memphis Branch, differing from the above statement of expenditures, as the construction account of Main Line has been credited with its net earnings for the ten months ending first of July last, the sum of $220,541 37, and the Memphis Branch $11,555 02: the two latter sums being excess of earnings over operating expenses and interest.

The floating debt of Main Line and Branches first of October, 1860, was $661,269 53, and per Secretary's statement No. 4, was on the first July, 1861, $348,076 24, showing a reduction in ten months of $313,193 29.

The equipment of the road with motive power and rolling stock is not sufficient for a first class road with an extended and increasing business, which in prosperous times may be reasonably expected; nor is the road fully completed as a first class one should be.

The earnings of the road have been relied upon to furnish the means of paying interest, the floating debt, additional equipment, and its full completion according to the estimates. During the ten months the road has been gradually improving in condition, and so has the motive power and rolling stock, and the portion of the earnings required for the operating expenses considerably reduced, giving promise of a still further reduction as the road progresses to full completion.

It is believed, when the road is well and permanently ditched, and a dry road-bed secured, with a full ballast, the culverts made permanent with stone arched culverts, and the wooden bridges reconstructed with iron trusses, that the annual expense of repairs will be greatly reduced, and that there will be greater security in the transportation of passengers and freight.

It is true, certain items of repair will be increased in the future, particularly for cross-ties, and for new rails, and repair of rails; but other items will be diminished, viz: the repair and keeping dry the road-bed, the repair of bridges and culverts, and also the repair of motive power and rolling stock.

The office of the company is at Louisville, Ky. The officers and directors are:

President—JAMES GUTHRIE.

Directors—James Guthrie, Thomas Quigley, U. E. Ewing, W. F. Cooper, H. D. Newcomb, James B. Wilder, James Speed, Jo. C. Guild, H. C. Seymour.

Secretary—WILLIS RANNEY.

Sup't of Transportation—J. B. ANDERSON.

Sup't of Machinery and Road Department—ALBERT FINK.

East Brandywine and Waynesboro' R. R.

The Pennsylvania Railroad Company has effected a lease of the East Brandywine and Waynesburg Railroad for five years. This road runs from Dowingtown to Waynesburg, in Chester County, 17½ miles. It traverses a thickly settled region. The lease secures the application of the whole of the net earnings to payment of the interest on the

$140,000 of 7 per cent. mortgage bonds issued by the Brandywine Company, first, and the balance, if any, to the stockholders.

Great Western Railway of Canada.

We give below the report of the directors of this company for the half-year ending July 31, 1861. It is dated London, October 11, 1861, and signed, on behalf of the board of directors in England, by Robert Gill, President of the company, and chairman of the English board:

The receipts on capital account during the last half-year were 20,340*l.* for arrears of calls on shares, &c., making the total receipts on 31st July, 1861. 5,213,097*l.* Bonds due in 1862, amounting to 1,400*l.*, have been paid off during the half-year, and notice has been given that the directors are prepared to pay, at once, the balance, if applied for, which amounts to 16,200*l.* The expenditure on capital account during the half year was 4 079*l.*, the details of which are given in the engineer's report, making the total outlay to 31st July, 1861, 4,980,128*l.*, and leaving a balance to the credit of capital of 232,968*l.*

The revenue account shows the following results:—

Gross receipts	£209,316
Working expenses, including maintenance of way, taxes, insurance, and rent of suspension bridge	129,616
Balance of half-year	£79,700
Add surplus from previous half-year	15,790
Total	£95,490
From this there has to be deducted—	
Interest on Governmeat loan	£17,498
" Company's bonds, &c.	32,994
Renewal of rails, sleepers, bridges, &c	25,517
Payment on acc't of Flamboro' accident	1,107—77,117
Leaving a surplus of	£18,373

which the directors recommend should be carried to the credit of the current half-year.

The severity of the last winter added heavily to the working expenses. The cost of maintenance of way exceeded by 6,673*l.* the same charge for the corresponding period of last year, in which is included the sum of 3,535*l.* for extra cost of removing snow, heavy slips, &c.; whilst the unusual breakage of wheels, tyres, axles, &c., largely increased the expenditure in the locomotive and car departments.

The following statement will exhibit the comparison of the receipts and expenses for the last three half-years:—

Half-year.	Receipts. Pass. & mails.	Goods & live st'k.	Rent.	Total.	Expenses, &c.
	£	£	£	£	£
July, 1860	98,808	91,528	884	191,221	114,260
Jan., 1861	123,251	128,619	953	252,824	121,406
July, 1861	95,771	113,800	744	209,316	129,616

The gross traffic as compared with the corresponding half-year shows a rise of 18,094*l.* but accompanied by an increase of expense amounting to 15,355*l.* The general improvement lately experienced, as shown in the traffic of the half-year ending January 31st last, would doubtless have continued bnt for the complete check given to all commerce by the civil war in the United States. As regards the West, these evils have been increased by the enormous depreciation of the bank currency, founded mainly upon the deposit of Southern securities, which were rendered comparatively valueless on the breaking out of actual war. The traffic upon neighboring American railways is now showing the effect of such disasters, although some have been to a certain extent benefited by the carriage of troops and munitions of war, in which, of course, this company has not been able to participate.

The heaviest falling off is in through passengers, but the dissensions in America have also largely affected the consumption of foreign and other manufactnred goods in the Western States, thus greatly reducing an important and valuable stream of through traffic from New York to Bosson.

Whilst the present unsettled state of affairs continues it is impossible to expect anything but a moderate amount of through business, especially in passengers. The harvest in the Western States this year is reported to be excellent, and in Canada the result of careful inquiries is that the harvest will be a fair average.

The directors continue to receive encouraging reports of the apparently inexhaustible oil springs in the Sarnia district, and when a properly organized system of working them is perfected, and the means of access to them improved, it is to be expected that the transport of earth oil will form an important and profitable item of traffic to this company.

Last half-year's report expressed an opinion that it might be desirable to erect a mill for re-rolling the worn out rails. The directors have since found it advisable to come to a decision upon this point, and a rolling-mill is now in course of construction at Hamilton.

The systematic renewal of the permanent way, bridges, and fences, pursuant to the report of the engineer of July 31, 1860, has been continued during the last half-year, and an expenditure of 25,517*l.* has been incurred, the whole of which has been charged to revenue. This is in accordance with the practice hitherto pursued of charging each half-year with the full cost actually incurred, and although it bears heavily upon a diminished income, yet by this plan no debts are contracted for relaying the line to be liquidated out of future revenue. It is right to say, however, that many of the English companies have adopted a different course, and that six of the leading English lines in June last had an aggregate total of over 340,000*l.*, already expended in renewals, to be charged against future revenue. The present outlay is also increased by the fact that 206½ miles of the line are now being "fish-jointed," at an expense of 25,214*l.*, of which about half having been already paid for, has up to the present time been charged to revenue, but the remainder of this expense it is in future proposed to charge to capital, it being an addition to the original value of the line.

In pursuance of the resolution come to at the statutory half-yearly meeting in Canada on 17th May, 1861, the necessary steps were taken to place this company's loan to the Detroit and Milwaukee, as a third mortgage charge upon the new company, carrying interest at 10 per cent. per annum.

The directors regret that the arrangement proposed for disposing of the different outside claims upon the Detroit and Milwaukee has not been concurred in by all of those creditors whose position is subsequent to that of the Great Western of Canada, and by the last accounts they are informed that legal proceedings are pending in the courts of Michigan, to which it is attempted to make this company a party. The traffic of the Detroit and Milwaukee has been injuriously affected by the difficulties which have been previously adverted to. The gross receipts of this company derived from the traffic to and from the Detroit and Milwaukee amounted during the last half-year to 16,530*l.*, as against 17,485*l.* in the corresponding half-year of 1860.

Since the meeting in London on 11th April last, the accountants employed by the late committee of investigation have sent in a bill comprising all the cost of the inquiry incurred by them, (amounting to £9,130) and it was afterwards certified to by their chairman, "that in the opinion of the late committee such expenses should be paid."

The board required as a preliminary to examining this account, that all books and papers taken from the company's offices should be returned, and all the evidence, reports, and other documents collected by the late committee in the course of their inquiry, laid before the board, in order that by a comparison of the work performed with the charges made for it, some basis might be obtained on which to estimate the propriety of their claims. The directors regret that they have not been able to pass and discharge the account. After giving the subject their fullest consideration, they addressed a letter, on August 8th, to the chairman of the late committee of investigation. To this letter no reply has been received. Messrs. Coleman, Turquand, Youngs and Co. have written to the board respecting their account, but the directors have declined entering upon any discussion except with the late committee.

The two auditors who were appointed at the last meeting of shareholders have carefully examined the accounts for the half-year, and the certificate of their correctness is appended. Both these gentlemen have had the advantage of making a personal visit to Canada, and have made themselves acquainted with the detail of the Canadian system of account-keeping.

The directors have had the staff, both in this country and in Canada, under their careful consideration, with a view of ascertaining if any justifiable reduction could be made, and they are able to report that some saving has been effected.

New York Central Railroad.

The New York Central Company can load and send off from Buffalo from 250 to 300 cars of ten tons each per day, or from 25,000 to 30,000 barrels of flour, or its equal in rolling freight. From Suspension Bridge it can send off fifty cars per day, making from the two points 3,000 to 3 500 tons per day. In additton to this, the road requires 100 cars for its East-bound local business, making a total of 400 to 450 cars per day to arrive at Albany, or 4,000 to 4,500 tons. A freight train is generally made up of about 25 cars, which would make from sixteen to eighteen freight trains a day.

The difficulty the New York Central labors under is not loading up and starting its trains, but in so arranging its many trains as to pass each other without interruption. There are now twelve passenger trains running over the road every day, and with, say, sixteen freight trains going east and four west, making a total of thirty-two trains a day on a road of three hundred miles, and with forty miles of the road with only a single track, some idea of the difficulties in the way may be imagined.

The difficulty will soon be met, for we understand the managers of the road have determined to lay these forty miles at once, and thus secure a double track throughout the entire length from Buffalo to Albany. We learn, further, that the Central Company have contracted for ten new additional locomotives and several hundred new freight cars, to be put upon the road during the coming Winter.

To give some idea of the business which the New York Central Railroad is drawing from the North-West, we can state that for the week ending Saturday, Nov. 2, nineteen propellers, loaded with an average of 4,000 bbls. of flour each, cleared from the Port of Toledo alone for the New York Central at Buffalo; that the Central is under obligations to the Michigan Southern, to take away from Toledo 5,000 bbls. of flour or its equivalent daily, for all this Fall. This, it must be remembered, is but a drop in the bucket. Besides this fleet of Toledo boats, the Central has a line to Cleveland, one to Sandusky, one to Detroit, one to Milwaukee, and one to Chicago.

It has the Great Western of Canada, which takes all the Michigan Central and Detroit and Milwaukee Railroads bring to it at Detroit and delivers it to the Central at Suspension Bridge. It has the Buffalo and Lake Huron Railway, which drains a large portion of the most fertile section of Canada West. Then it has the Michigan Southern, Toledo and Wabash, Cleveland and Toledo, Pittsburg, Fort Wayne and Chicago, Bellefontaine, Dayton and Michigan, Sandusky, Dayton and Cincinnati, and Cleveland and Columbus, pouring through the Lake Shore Road to Buffalo a constant stream of all rail freights.—*Albany Atlas.*

New York and New Haven Railroad.

OVER ISSUES OF STOCK.

The Supreme Court of this State has just decided a case growing out of the Schuyler fraud, which is the first one of the kind that has come before our Courts. Numerous cases have been before the Courts of New York, receiving, in the course of their passage from the lower to the higher Courts, a variety of decisions. The present case involved several points of much interest. The Bridgeport Bank, the plaintiff in the case, in 1849 took from Schuyler two certificates of stock of the New York and New Haven Railroad Company, one for fifty and the other for forty shares, as collateral security for an account which Schuyler had with the bank. The bank held these certificates without taking a transfer of the stock until 1854, when the Schuyler fraud was discovered; immediately upon which the Cashier of the bank presented the certificates and demanded a transfer of the stock. The railroad company refused to allow the transfer, having closed their transfer office immediately upon the discovery of the fraud. The bank some time after made another demand, which was again refused, and this suit was brought for damages for the refusal to allow the transfer.

In 1849, when the certificates were issued by Schuyler and delivered to the bank, he was the owner of one hundred and sixty shares of genuine stock. At the time of the demand upon the company in 1854, an immense number of spurious shares had been issued by him, upon some of which the whole of his genuine stock had been transferred, so that at that time there was no genuine stock standing in his name on the books which could be transferred to the bank.

By the rules of the Railroad Company no shares could be transferred unless the certificates held for them were surrendered to the transfer agent at the time. The certificates held by the bank were assigned in blank by Schuyler on delivery to the bank, and were accompanied by a blank power of attorney signed and sealed by Schuyler, for the transfer of the stock on the books of the company.

The certificates thus issued by Schuyler were in almost all cases held as collateral security by the parties to whom they were assigned, who retained them, often for several years, without taking transfers, regarding them as secure since no transfers could be made without a presentation of the certificates. The Bridgeport Bank in this case held the certificates in this confidence.

The plaintiffs claimed that, under the established custom of negotiating such certificates, taken in connection with the rules of the company which secured the stock from transfer while the certificates were outstanding, the certificates were to be regarded as negotiable or *quasi* negotiable—so that the *bona-fide* holder was protected against any defense which could have been set up in the first instance against Schuyler himself, or which might grow out of transactions occurring after the certificate was negotiated.

The counsel for the defendants denied this, and contended that, as the plaintiffs had not taken a transfer of the stock, and other parties, with equally good certificates, had come in and surrendered their certificates and taken a transfer of the stock, the plaintiffs had lost their right to it, precisely on the principal that, where a person sells personal property and does not deliver it, and afterward sells it to a second bona fide purchaser, who gets possession of it, the latter holds it and the former has lost it—the party losing it having no remedy except a claim on the vendor for damages.

This was the important point in the case, and the Court held that the railroad company, having by its rules and the form of its certificates, stipulated that the stock represented by the certificates should not be transferred until the certificate was presented, could not set up the fact that the stock had been transferred to other parties, especially as the transfer was the fraudulent act of their own agent, who was acting within the scope of his official authority, and therefore made his own knowledge and fraud the knowledge and fraud of the company.

The Court did not express an opinion as to what would have been the result if the stock in question had not been genuine stock. The decision, therefor, does not conflict with the decisions in New York in cases where the stock in question was confessedly spurious, and does not, perhaps, contribute very much to the settlement of the principal questions growing out of the Schuyler fraud.—*Hartford, Conn., Press.*

The Grand Trunk Railway.

The Grand Trunk Railway of Canada embraces a line of 1,131 miles, of which 1,096 miles are in actual operation. It is at this time the longest line in the world. It will, however, be soon eclipsed by the East India Railway, to extend from Calcutta to Delhi, a distance of 1,414 miles—costing £15,000 sterling per mile.

The Grand Trunk Railway extends from the Atlantic Ocean at Portland to Lake Huron, a distance of 794 miles, with a branch to Detroit of 59 miles—a branch to Quebec of 96 miles, and to the River Du Loup of 118 miles—making, with its various branches, 1,096 miles. The building of this line extented over a period of 14 years. The work commenced at Portland July 4, 1846; the various sections were opened for traffic at the dates following:

Portland to Yarmouth	12	miles,	July 4, 1848
" Mechanic Falls	24	"	Feb. 4, 1849
" Paris	11	"	Jan. 8, 1850

American Railroad Journal.

Saturday, November 16, 1861.

Share and Money Market.

The Share Market, under the favorable news from the great expedition, is very buoyant, prices having advanced in many instances two and three per cent. The success of the expedition seems to have been complete, and is justly regarded as a very great step toward the pacification of the country. Government securities are buoyant. Shares are influenced as well by the excellent traffic of the roads, as the favorable aspect of political affairs. The most buoyant stock on the list is Erie Preferred. The certainty that the Erie and Central Railroads must be the avenues through which the West must receive its merchandise, formerly sent up the Mississippi, has been a powerful element in the advance of their shares. The 4th and 5th class bonds of the Erie have also largely advanced. There is a steady improvement in railroad bonds of all classes. Money is abundant, and although there is an active demand, the supply is ample. The aspect of affairs for months past have not been so hopeful as now, with the feeling consequent upon success, it is fair to suppose that the market will nearly, if not quite, reach the prices which prevailed before the outbreak of the rebellion.

Holders of second mortgage b nds of the New York and Erie Railroad Company not yet extended for twenty years, are requested to present bonds without delay at the office of the company, at the foot of Dnane st., for extension. Those unwilling to extend will receive par and interest for their bonds, from parties who are willing to extend them, on presenting them at said office on Tuesday and Thursday of each week, at from 10 to 12 o'clock, until the 1st day of December.

The Pacific Mail Steamship Company has declared a dividend of 5 per cent., at the rate of 20 per cent. per annum, payable on the 13th inst.

The coupons due December 1st, on Milwaukee City Re-adjustment bonds will now be paid on presentation at the office of W. Schall & Co., No. 58 Exchange Place.

By an order of the United States Circuit Court for the Southern District of Ohio, the Receiver of the Central Ohio Railroad, is authorized to pay the coupons on the first mortgage bonds maturing 1st November, 1857, and 1st February, 1858. Holders of coupons must present the same at the Receiver's office at Zanesville, Ohio, and can be paid in Ohio or New York funds.

The Pennsylvania Railroad Company have made the usual semi-annual dividend of 3 per cent., payable on and after the 15th inst.

The Northern Railroad, N. H., has declared a dividend of two dollars per share, payable Dec. 2.

The Warwick Valley Railroad is about completed. It was expected that the rails would be laid to the village of Warwick this week.

Rates of Foreign Exchange.

The rates of Foreign Exchange, as quoted by N. BRANDT, Broker, No. 39 Exchange-place, for the steamer of November 16, were as follows:

London—60 days' sight	108¼ per cent.
London—3 days' sight	109¼ "
Paris—60 days' sight, per dollar	5f. 27½c.
Paris—3 days' sight, per dollar	5f. 22½c.
Amsterdam—60 days' sight, per guilder	40⅜c.
Hamburg—60 days' sight, per marc banco	35¾c.
Frankfort—60 days' sight, per florin	40¾c.
Bremen—60 days' sight, per rix dollar	78¼c.

Louisville and Nashville Railroad.

The annual meeting of the stockholders in this road was held in Louisville on the 7th of October, at which the reports of the directors and officers were presented, an abstract of which is given elsewhere. Also the report of the Examining Committee appointed at the previous annual meeting; and the Secretary's statement showing the condition of the road and branches on the 1st of October. We shall give attention to the two last in a subsequent number. The following gentlemen were elected directors to serve for the ensuing year: James Guthrie, Thos. Quigley, H. D. Newcomb, James B. Wilder, U. E. Ewing, James Speed and W. F. Cooper.

Attached to the report are supplemental reports (Nos. 1 and 2) of the President, recounting the seizure by the military authorities of the State of Tennessee of a large portion of the road, engines, cars, wood, materials, etc. From the 1st of these, we learn that on the 4th of July the passenger, freight and construction trains operating in Tennessee were seized by order of the Governor of that State, who has retained them, and is, and has been, operating the 45 miles of the road in that State. The moveable property thus seized and retained consisted of 5 locomotives, 3 passenger and baggage, 49 box, 14 flat, 1 rack, 3 caboose and 3 boarding cars, together with material, tools, cross ties, wood and stone, valued at $110,277 14. If to this be added the value of the road, the total amount will be $1,949,662 40, and worth to the company in connection with the balance of the road at least 8 per cent. per annum, and the cost after keeping the same in repair.

The 2d supplemental report states that on the 1st of September, the Memphis Branch and the Main Stem from the Tennessee State line north to the junction of the Lebanon Branch was also seized by the military authorities, together with the motive power, rolling stock, wood, material, etc. upon the same. The railroad bridge over Rolling Fork of Salt river was burnt, and since

that time, the railroad bridges over Nolin river and Bacon Creek have been burnt by said forces. The moveable property thus seized consisted of 11 locomotives, 8 passenger, 3 baggage, 94 box, 9 rack, 54 flat and 2 boarding cars, which, together with the wood material, tools, etc., were valued at $247,019 89. The estimated expenditures required to restore the bridges to their former condition is $20,600. Add the loss stated above, $110,277 14, makes the loss in motive power, rolling stock, wood, bridges, etc., $377,897 03. Besides the profitable business of the road has been entirely destroyed. A fair estimate of the net earnings of the road, but for these obstructions to its business by the war, may be set down at not less than $600,000 per annum with the road, motive power and rolling stock in a constantly improving condition. Now the company will not only lose a fair annual income from the investment, but an additional loss in the deterioration of all the items of the investment nearly if not quite equal to the annual loss of net income as above stated.

Russia--Its Energy and Enterprise.

From the report of the council of administration of the Great Russian Railway, recently presented to a general meeting, of that widely scattered proprietary, it appears that on January 27th, 1860, the section from Pskow to Ostrow, extending over 49 verstes, was opened for traffic; and on November 8th, 191 verstes more were completed, making the length finished upon the Varsovian line 497 verstes. On 11th April last the branch from Kowno to the Prussian frontier, 81 verstes in length, was finished; and on 14th June the section from Moscow to Vladimir was executed, so that the company has now 756 verstes in full working. At the end of the current year, the entire line from St. Petersburg to the Prussian frontier will be opened for public traffic, and so unite the capital of the empire to the other great lines of Continental Europe. Finally, in the course of next spring, the company will complete the whole network which it undertook by opening to the public the portion of the Varsovian between Landwaroff and Varsovia, and the last part of the line from Moscow to Nijni. The council of administration refers with pride to the rapidity with which the works have been executed, and contends that it has opened more miles per annum than any other company formed in England or Europe. Thus by next spring the undertaking achieved will comprise 1,614 verstes, or 1,722 kilometres (a kilometre, we beg to remind the reader, is 0.62 mile English), executed in five years, being at the rate of 344 kilometres per annum. In France the average length of line constructed by the Lyons-Mediterranean has been 107½ kilometres per annum; by the Southern, 105; by the Eastern, 99½; so that the united efforts of the three great French companies have not equalled what has been achieved by the Great Russian in presence of a climate admitting only about half the number of working days enjoyed by the west of Europe. In Canada again, observes the Russian administration, the Grand Trunk system was only executed at the rate of 225 kilometres per annum, to say nothing of the Victoria bridge which was not completed till a year and a-half had elapsed after the opening of the remainder of the undertaking; while in British India eight companies organized for the execution of distinct lines, extending altogether over 8,000 kilometres, have at present, after struggling on for ten years, only executed a fifth of their contemplated task, or about 1,600 kilometres. Already the Great Russian has doubled the extent of railway communication which Russia enjoyed when it commenced operations; and in a few months more it will have tripled that amount, while, it is alleged, the rapidity of execution has not in any way compromised the safety of the works. The administration justly observes that two principles may be followed in the construction of railways. According to the first, everything is made subordinate to an extreme reduction in the expenses attending the first establishment, without any regard being had to the working expenses resulting from insufficiency of original construction. The rails in such a case are light; the gradients very heavy; the curves of limited radius; and timber enters, to the exclusion of everything else, into the construction of buildings, bridges, etc. The consequence is that, in working, only small engines of limited power can be employed, while the number of trains is unduly multiplied, as it is necessary to reduce the weight of each of them; hence the working expenses are increased and the net profit reduced almost to nothing. By the other system of construction, on the contrary, besides real economy of construction, which ought always to be borne in mind by the engineer, economy is also observable in the working expenses; the gradients are moderate; the curves have a liberal radius; the buildings and bridges are of a solid and permanent character; the rails are heavy and capable of resistance; and the employment of powerful engines enables the weight of the trains to be increased and their number consequently reduced. If by this latter system the construction involves a larger outlay, the working is effected at less expense and the net product is larger. The council, in adopting the more solid and durable policy, believes that it has best promoted the objects of the enterprise and the views of the Government; for, in obtaining economic conditions of working, it has adopted the surest means of securing dividends on the shares and a liquidation of accounts with the State.

The original estimates which served as a basis of the concession granted by the Government have been exceeded; and this is attributed to the rapid and unforeseen advance in the price of labor, the fall of the course of exchange, the depreciation of the rouble, the sacrifices necessary for supplying the absence of local resources, etc Deducting from the outlay these charges for interest and exchange, the total expenses incurred for rolling stock, construction and material of way, and charges for management, amounted, in round figures, to 129,000,000 roubles, or 74,000 roubles per verste. To this must be added 18,000,000 roubles expended by the State on the Varsovian line, making the total cost of the 1,614 verstes 137,500,000 roubles, or 85,000 roubles per verste; or, in English money and measures, about £16,500 per mile;—a tolerable sum, considering the nature of much of the ground traversed. The administration of the company comforts the shareholders by stating that the averag cost of the French lines (calculating the value of the rouble at 3f. 70c.) was 111,566 per verst—we prefer to employ the Russian measures for the nonce by way of rendering the comparison more readily obvious and forcible; of the Dutch lines, 85,281 roubles per verst; of the Belgian State lines, 98,-095 roubles per verst; of the line from Berlin to Potsdam-Magdebourg, 95,828 roubles por verst; on the Cologne-Minden, 96,471 roubles per verst; on the Rhenish lines, 101,954 roubles per verst; and on the Aix-la-Chapelle, Maestricht' and Haaselt line, 92,205 roubles per verst. The administration admits that many lines could be cited which have cost less than the company's system, but it urges, on the other hand, that many have cost far more, the English lines averaging 130,000 roubles per verste, and one French line, the Rouen and Havre, 182,000 roubles per verste. If should be further borne in mind that the period during which work can be carried on in the open air is only one-half what is practicable in Western Europe; that the population is less dense than in France, Belgium, or Germany, which have supplied the comparisons cited; that in Russia materials of construction are procured with more difficulty and considerably more expense (for local resources proving insufficient, it was often found necessary to create new establishments for bricks, lime, etc.); and that iron works and other establishments which should contribute to the creation of railways do not yet exist in Russia. The Nicholas line—created by the imperious genius of the late Czar—cost 121,420 roubles per verst, while the experience since gained in railway construction has enabled the present company to form its system at 85,000 roubles per verst, although the increased prices of materials and labor have more than swallowed up the savings effected by improvements in matters of detail. On the whole, the council of administration is of opinion that it has been enabled, in the face of many exceptional and unforeseen difficulties, to execute a series of lines, which in regard to solidity and cost of construction, as well as probable expenses of working, will be found to compare advantageously with the greater part of the railways of Europe.

Alexandria, Loudoun and Hampshire R. R.

This company was chartered March 15th, 1853, with a capital of $3,500,000 and authorized to construct a railroad from Alexandria to Paddytown, a distance of 160 miles. A company occupying the eastern part of the same route had been previously (March 20, 1847) incorporate under the title of the Alexandria and Harper' Ferry Railroad Company. The company was organized October 20, 1853, and the survey of the route immediately undertaken. The work of construction was commenced in February, 1855, and the road completed from Alexandria to Herndon, 22.60 miles, in September, 1859; to Farmwell, 31 miles, in January, 1860; to Leesburg, 37 miles, in May, 1860; and to Clark's Gap 41.51 miles in the spring of 1861. By an act passed February 15, 1854, the company acquired the right to extend the road beyond Paddytown to any point in the county of Hampshire. On the 9th of February, 1860, an act was passed authorizing a further subscription of $600,000 by the Board of Public Works upon the usual proportion of three-fifths to two-fifths. The requisite subscription of the two-fifths remains to be made. At the annual

meeting of the stockholders, Oct. 31, 1860, a resolution was passed authorizing the directors to borrow money for the purpose of completing the road as far west as Winchester, via Berryville, and to issue proper certificates of such loans, and to pledge the property of the company for the payment of the same and the interest to arise thereon. The amount of capital stock paid in is as follows:

By the State of Virginia	$976,748
By other shareholders	654,500
Totai	$1,631,248

The company has no funded debt.

Upon the completion of the road to Farmwell, the board, deeming it advisable to commence the running of the trains in connection with the line of coaches then carrying the mails to Winchester, made an arrangement for the purpose with S. G. Miller, Esq., the contractor for building the road, to continue until the track should be laid to Leesburg, allowing him one-half the gross earnings in full of all expenses. This arrangement terminated on the 19th of May, 1860, and on the 21st the road was put in charge of the general superintendent. During the time the road was operated by the contractor, from Jan. 16th to May 19th, 1860, the receipts were $3,422 95; and from May 21st to Sept. 30th, $9,895 97—making a total of $13,318 92, viz:

From passengers	$7,495 36
" freight	5,018 76
" mail	804 80
Total	$13,318 92

—and for yearly and commutation tickets $172 38.

The expenses of operating and maintaining the road during the same time, including the amount ($1,432 09) paid S. G. Miller, was $5,817 56.

The company own three locomotives; 4 passenger and baggage, 21 flat, 15 box, 4 hand and 2 dirt cars.

The cost of road and equipment, September 30, 1860, was as follows:

Engineering	$93,157 30
Graduation	545,456 94
Masonry	186,719 28
Road superstructures	425,945 20
Bridge "	45,000 00

The road is well supplied with passenger and freight houses at all the stations; a general depot at Alexandria, and car and engine houses at either termini.

The office of the company is at Alexandria, Va. The officers are:

President—LEWIS MCKENZIE.

General Sup't—WASHINGTON BLYTHE.

Treasurer—RUBEN JOHNSON.

Street Tramways.

The grand jury at the Surrey Quarter Sessions at Kington have returned a true bill against Mr. G. F. Train and several vestrymen of Lambeth for a nuisance committed by obstructing the thoroughfare in the Kennington and Westminister roads. The names of the other persons included in the indictment are—Messrs. Hathaway, M'Intosh, J. T. Mitchell, F. Doulton, E Harrison, T. H. Fowler, J. Purssey, J. Williams, H. A. Kennan, W. Jeffree, J. W. Stratton, T. Giles, and R. Taylor. The indictment contains five counts. The first charges the defendants with obstructing the free passage on the said highways by placing thereon iron rails, and thereby rendering the said roads unsafe for the passage of vehicles and horses. Other counts charge the defendants with digging divers large holes and breaking up the roads; and other counts charge the defendants with conspiring together for the purpose of effecting the said objects. The names of 23 witnesses, including several of the principal inhabitants of the parish and of the adjoining districts, were endorsed on the bill, but the grand jury did not deem it necessary to examine more than seven of them. The object of this indictment is, of course, not to inflict punishment upon the defendants, but merely to abate what the parties consider to be a nuisance. It is not improbable that the proceedings will be removed to the Court of Queen's Bench, in order to have all legal questions arising in the case fully argued.—*Herapath.*

Movement of Breadstuffs at Chicago.

Quotations at the Stock Exchange for Oct.

We give herewith the highest quotations, "bid," at the New York Stock Exchange for the month of October, for the shares and bonds most current in the market. The lowest quotations in most instances were upon the first day of the month. The advance, which, in some cases was as high as ten per cent., was in the two first weeks of the month, with the exception of Erie Common and Preferred shares, and bonds. These were highest at the close of the month. The securities of this company engross public attention at the present time, more than those of any other road.

For the list generally, the highest point reached was on the 15th; after which the market fell off rapidly, from which it has not, with a few exceptions, yet fully recovered. The tendency at the present is an upward one. The following statement will show the per cent. of advance of the list given for the month.

Name of Securities.	Advance per cent. for the month.
Michigan Central Shares	11

Journal of Patent Law.

PATENT RIGHTS: WHAT CONSTITUTES THE UNITY OF A MACHINE OR INVENTION: A NOVEL WAY OF REDUCING DAMAGES: POWER OF COURT IN EQUITY AND AT LAW AS TO DAMAGES.

We give this week the facts and decision in the case of *Livingston et al. vs. Jones et al.* just decided by the United States Circuit Court. It will be found to be a case of considerable interest to our general readers and of special importance to our mechanical and manufacturing subscribers.

Till within a few years past most of the door locks used in this country were imported from England. It was an important object therefor to discover or invent some plan by which this article could be made more cheaply and better than the imported notwithstanding the higher price of labor here. Such an inventor who, by bringing his invention into market, could expel the foreign article, would evidently be a public benefactor, the article of door-locks being one of immense consumption in this country; this object was in part effected by making the locks of cast iron; but a difficulty in the way of these cheaper productions was found in the fact that door locks had to be made right and left, and a lock made for a right hand door would have to be turned upside down in order to be used on a left hand door and *vice versa*. It became therefore a very important object to those who manufactured and to those who dealt in this article, that this difficulty of right and left hand locks should be somehow obviated and that every lock might be equally capable of use on right or left hand doors. An American named Sherwood, under whom the complainants claimed was the first to invent a mode of effecting this object, and soon succeeded in establishing a manufacture at once cheaper and better than the imported. His patent was for "a new and useful improvement in door-locks." There was necessarily in Sherwood improved locks a vast deal—much the greater part—of what had previously been in locks, and he claimed, of course, no merits for inventing door locks generally. "What I claim as my invention"—is the language of his application for letters—"is making the case of door-locks and latches double-faced or so finished that either side may be used for the outside, in order that the same lock may answer for a right or left hand door."

After Sherwood had obtained his patent and sold it to the plaintiffs (which it may be mentioned that he did for about $600) the respondents, Jones & Co., conceiving that the invention was without originality, undertook to disregard the patent, and during a term of two years and six days did disregard it and being able to sell for $31 per dozen, locks which it costs but $10 64 to make, their profits were large.

The owners of the Sherwood patent, however, the present plaintiffs, having filed a bill some time since in this court obtained a perpetual injunction and a decree and reference for account. The account being taken, it appeared that making a deduction for the interest of money invested in the manufacture, the costs of machinery, wear and tear, expenses of sales, insurance, agencies, transportation, bad debts, etc., the net profits upon all the locks (including every part of the locks) hich the defendants made or sold, were $13,282 93. But the defendants denied that they were liable to profits on the whole locks or for any profits except those properly springing from the case of the lock; that part of it alone of which Sherwood claimed to be the inventor; their idea was that they could apportion this sum of $13,282 93, reported as their profits to the different parts of the lock: the profits on each part being fixed on an arithmetical proportion to the cost of each.

The account then would stand thus:

Profits on the case (the improvement for which Sherwood got his patent)	$3,123 48
Do. latch and kepper	1,221 53
Do. other parts of the lock	4,577 01
Do. trimmings	4,360 91
Total	$13,282 93

The questions now before the court therefore were:

I. Whether the repondents were to be charged with $3,123 48, profits on the case alone on the basis of computation just stated, or with $3,123 48, profits on the whole lock.

II. Whether assuming as proved that the violation has been wilful and gross, the court in a form of proceeding coming from a bill in equity, could treble the damages.

The following is that portion of the opinion of the court which we deem essential to a full understanding of the decision of the case.

GRIER, J.—The great question of the case now recurs: Is this Janus-faced lock a peculiar and distinct machine introduced into market as a cheaper and better article than other machines without the peculiar characteristic of the patented one? Does the value of the patent to its owners consist in the close monopoly of the right to make and sell this species of lock as one individual machine. Has it peculiar characteristics which distinguish it from other machines of the same genus and which give it a peculiar value in the market? If so, the complainants have a right to demand that the defendants having infringed their exclusive right to make and sell this peculiar machine or manufacture, are justly liable to refund all the net profits made by such infringement. If, on the contrary, the patent is for some addition or improvement on an old and well known implement, or some separate part or device there-

of of small importance compared with the whole; if the license to use the improvement or addition was sold, as separate and distinct from the whole machine, the measure of damage would be the price of a license and not the profit made by the exclusive right to make and sell the whole machine.

The history of this invention, its object and result are fully stated in the case of Livingston & Co. *vs.* Jones & Co., between these same parties, when the originality of Sherwood's invention was assailed and are given again here in the reporter's statement.

The claim of the Sherwood patent was for "making the case of door-locks and latches, double-faced or so finished that either side may be used for the outside." The arrangements of the internal parts of the lock and devices necessary to such a lock are set forth in the specification. They were rather complex and required that in order to change the lock from a right hand to a left hand lock that it should be opened and some change made in the position and arrangement of the internal parts. For the purpose of the present discussion it is unnecessary to describe these devices. The name "Janus-faced" locks was given to this machine to distinguish it from others which had not its peculiar qualities.

Now it is evident that although the patent of Sherwood may be said to be for an improvement in the manufacture of locks a well known implement or machine; nevertheless the lock contrived by him was a new and distinct species having certain qualities differing from all other locks; that the Janus-faced lock is a specific article (although of the genus lock) known in the market as having peculiar value; and that the value of the monopoly granted by the patent consisted in the exclusive right to manufacture this peculiar machine without any competition, and have all the profits of such a monopoly. The respondents have made large gains by trespassing on the rights of the complainants. These profits he made by this trespass, justly belong to the true owner, they have partaken equally with the complainants in the profits of the monopoly granted to them alone without license, and in defiance of their rights, the only measure of the redress to which the complainants are entitled, is an account of the actual profits made by respondents. It has been argued that this is not full measure of compensation for the injury done to complainants, but it is all that can be made matter of account in equity; and that is specifically claimed in the bill and all that comes properly within the sphere of the remedies administered by a chancellor.

The machine being a unit, a specific article well known in the market, having peculiar value because of the patentee's discovery or invention, the attempt to arbitrarily divide the profits of the monopoly of the whole machine among its parts is without precedent and receives no countenance from the case of Seymour *vs.* McCormick.

Although the statute gives original cognizance of patent controversies equally to courts of equity as to courts of law, and consequently the chancelor may decide a controversy as to infringement without requiring a previous verdict in a court of law, yet it does not follow that all distinction as to the remedies granted by each tribunal is to be abolished, a court of law cannot issue an injunction, nor a court of equity take jurisdiction to enforce a penalty or merely primitive damages. Each court will give the remedy peculiar to its own functions; the remedies of a court of chancery are by injunction and account; penalties and vindictive damages can be recovered only in courts of law. Decree for $13,282 92.

Railroad Earnings--Monthly.

The earnings of the Chicago, Burlington and Quincy Railroad Line in October were:

	1860.	1861.
Freight	$136,559 41	$130,115 62
Passengers	39,502 69	25,472 84
Mails and miscellan's.	1,926 80	4,436 44
Total	$177,988 90	$160,024 90

Between Chicago and Burlington—210 miles:

	1860.	1861.
Freight	$147,490 94	$151,672 77
Passengers	45,810 06	29,965 69
Mails and miscellan's.	2,291 63	4,794 64
Total	$195,592 63	$186,433 10

Between Galesburg and Quincy—100 miles:

	1860.	1861.
Freight	$27,850 27	$19,384 23
Passengers	13,488 62	7,379 68
Mails and miscellan's.	2,531 69	854 51
Total	$43,870 58	$27,618 42
Aggreg. for 310 miles.	$239,463 21	$214,051 52
Decrease		$25,411 69

The statement of the Illinois Central Railroad for October is as follows:

Land Department.

	$50,700,000
In Bank and Sub-Treasury Nov. 1, 1860.....	27,900,000
" 1859.....	25,500,000
In Banks and Sub-Treasury, January 1, 1861.....	30,100,000

In addition to the importations at this port, about $8,000,000 have been imported in Boston. The total receipts from California have probably equalled $40,000,000, as at least one-third of the amount received from that quarter does not appear on any manifest. The total additions to the stock of specie in the country since Jan. 1, 1861 has probably equalled $85,000,000. By the first of January it will not much fall short of $100,000,000.

OFFICE OF THE NEW YORK CENTRAL R. R. Co.,
Albany, November 1, 1861.

THE annual election for Directors of this Company, and for three Inspectors of the next election, will be held at the Office of the Company, in the Exchange, in the city of Albany, on the second Wednesday (the eleventh,) of December next. The poll will be opened at eleven o'clock in the forenoon, and will continue open for two hours thereafter. By order of the Board of Directors.

JOHN V. L. PRUYN,
Secretary *pro tem.*

Railroad Supply Store
FOR SALE.

ONE of the oldest and best established Railroad Supply Stores, may be had very low, the present proprietors having other business requiring their whole attention. Address Wm. Kemlo, 34 Hawley st., Boston, or Box 1487, New York Post Office. 2t*

LOCOMOTIVES FOR

THE Boston and Maine Railroad Company have for sale three second hand Locomotives of the following specification and description.

They all have outside cylinders and connections. Cylinders 15x20, four driving wheels, 4 ft. 6 in. diameter, diameter of boiler, 43 in. No. of tubes, 127; length of tubes, 10 ft.; diameter of do., 1¾ in.; weight of engines, about 24 tons each; capacity of tank on tender, 1,500 gall.

The above Locomotives are all in good working order, and are offered for sale on account of the Company having purchased several locomotives of greater capacity. Parties in want of a good machine can have now an opportunity to purchase at a reasonable rate. Application may be made at the office in Haymarket Square, Boston.

WILLIAM MERRITT Sup't.

Boston, Nov. 24, 1860. tf

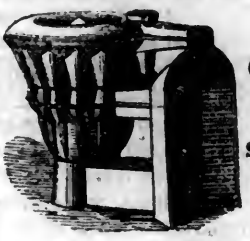
SANFORD'S
MAMMOTH
OR
GLOBE
HEATERS.

The best stoves for RAILROAD DEPOTS and SHOPS, and all places where a great heat is required. They are very durable, and very economical of coal.

Beware of Imitations that are inferior in strength and in other respects.

TESTIMONIALS.

HUDSON RIVER RAILROAD OFFICE, N. Y



This Company have now in use, over two hundred of Sanford's Mammoth Heaters, in Station Houses, Work Shops, and Engine Houses; we commenced using them in 1853, and some of the first stoves put up are still good and in use. We consider them the best Heaters now in use.

J. M. HEBARD, Supply Agent.

UNION FERRY COMPANY.

The Mammoth Heaters have been used by this Company in their waiting rooms at the several ferries and found to be very excellent stoves and more durable and valuable than any heretofore used. CYRUS P. SMITH, Managing Director.

The COSMOPOLITE
PARLOR RADIATOR, &
GAS BURNER,

Introduced one year ago, already ranks as the **LEADING STOVE** for PARLORS, SITTING ROOMS, and all places where a small, pleasant heat is desired.

Fire may be kept all winter with an astonishingly small supply of coal.

Send for description and testimonials.

SANFORD, TRUSLOW & CO.,
Nos. 239 and 241 Water st., N. Y.

Challenge Air-tight
KITCHEN RANGES,

May be placed in a fire-place without masonry, and with or without water-back; or may be set out on feet, as an ordinary stove.

This range, already very popular, has the **LARGEST OVENS** of any in the market; BAKES PERFECTLY, never failing to brown at the bottom; BOILS, ROASTS and and BROILS with unequalled facility and dispatch, and with extraordinary **ECONOMY OF FUEL,** which may be either coal or wood. Flues large and easily cleaned. A child can manage it, so simple is its construction. Castings extra heavy, and design plain and chaste.

Four sizes, adapted to families and hotels.

Beacon Light
SUMMER AND WINTER
PORTABLE RANGE,

Is a very popular range, having six boiler holes, one large oven that bakes perfectly, with an arrangement for roasting, or heating irons at the end. It is very economical of fuel. For a FEW DOLLARS a family may be supplied with a PERFECT COOKING APPARATUS, equal to the highest price stove in the market.

Three sizes, adapted to coal, or wood.

SANFORD, TRUSLOW & CO.,

HEAD QUARTERS, WESTERN DEPARTMENT,
St. Louis, Mo., August 23, 1861.

To Presidents and Superintendents of Railroads, Western Department, United States Army.

THE following is the basis established by the Government for the transportation of troops and supplies for the army:—

Per Passenger per mile (2) two cents for distances moved.

Equipments, munitions and supplies accompanying regiments, first class local rates, which will average about as follows:

30 miles or less	10	cents	per 100 pounds.
50 " "	15	"	"
100 " "	25	"	"
150 " "	40	"	"
200 " "	50	"	"
300 " "	75	"	"
350 to 400 miles not exceeding	90	"	"

For transportation of Horses in small lots, the following are the usual estimated weights of Railroad Companies:

Single animals	3,000 pounds.
2 animals	4,000 "
3 "	5,000 "
4 horses	6,500 "
5 "	8,000 "
6 "	9,000 "
7 "	10,000 "
8 "	11,001 "
9 "	12,000 "

Full car loads, 13 or 14 horses, usually charged 18,000 lbs. All other supplies forwarded by Freight Trains are charged local rates, according to classification of property which will usually average, on provisions and heavy freight, two to three cents per ton of 2,000 lbs. per mile.

Fast freights, immediate transportation, and precedence given to the Government in all cases.

All despatches required by the Government, to be furnished at the actual running cost.

E. H. CASTLE,
Supervisor Railroads, Western Department.

New York, Saturday, November 23, 1861.

The Government Loan and the Foreign Exchanges of the Country.

The banks of this city, during the recent visit of Mr. Secretary Chase, modified the agreement first entered into by substituting for the *third* instalment of $50,000,000 of seven and three-tenths per cents an equal amount of six per cents., payable in 20 years. The banks of Boston and Philadelphia will unquestionably make a similar change. Of the $250,000,000 loan, $100,000,000 was authorized to be made payable abroad, and sold, either at home or abroad, at a rate that would produce seven per cent. interest. The amount that can be issued under this provision will not probably exceed $50,000,000, as an equal sum will probably be exhausted by the issue of *demand* treasury notes.

The object of the banks in making the change was a security in a shape for permanent investment, and which might be more readily used than the seven and three-tenths three years bonds, or treasury notes, and which might be used abroad, should any apprehension arise on the score of the foreign exchanges. There are at present no indications that these will turn against us. On the contrary, there seems to be every probability that they will continue, as they now are, in our favor. Our exports largely exceed our imports, while the active foreign demand which still continues for produce, coupled with a high tariff, will probably maintain the former largely in excess.

The exports from this port, exclusive of specie, from the first of January, 1861, to the second week in November, was $117,742,798, against $85,527,846 for the same time in 1860. The imports, exclusive of bullion, for 1861 have been $112,629,123, against $206,057,343 in 1860. The excess of exports over imports at this port so far the present year has been equal to $5,118,675. The excess of imports over exports for a similar period in 1860 was $120,629,497, making a change in our favor at this port alone equal to $125,748,172.

To make up the balance against us last year, we shipped from this port, from January to November, $44,970,000 in specie, against $3,283,000 for 1861; and have this year imported into this city, and through Boston, on New York account, $44,018,000, to make good our balances against other countries. The change in the whole volume of the foreign trade of the city, exclusive of specie, has been equal to $125,693,272 in our favor. The corresponding change in the direction of the precious metals has been equal to $85,708,000.

Assuming the trade for 1860 to have been a healthy one, and, with the shipments of gold, the two sides of the great national ledger to have balanced each other, we are yet entitled to call for $39,985,272, to make good the indebtedness against other countries. Of course we shall not receive such an amount on account of existing indebtedness, whatever this may be, for we can not expect the result to realize exactly what the figures show. But the exhibit presented by these is certainly sufficient to relieve all apprehension that there is any balance against the country.

With regard to the future, against which the action of the banks is taken, by way of precaution, we do not see any cause for apprehension. The value of imports is still rapidly decreasing, and will continue to do so, at least till the tariff is modified. The imports for the last half of the year have equalled $1,200,000 per week, against $3,000,000 per week from January to July; the rate of falling off being 60 per cent. The importations for the first half of the year were on orders sent out before the rebellion was anticipated. The tendency is yet steadily toward a decline. Importations for the future must be chiefly confined to kinds of merchandize we can not produce—such as tea, coffee, sugar, wines and silks. It is not probable that the imports into this port of general merchandize for 1862, with a continuation of hostilities, will exceed $75,000,000, or into the whole country $100,000,000. The exports from this port alone for the present year will equal $145,000,000. There is every probability that they will be as great or greater next year, as large quantities of cotton and tobacco will unquestionably come forward through the interior routes.

Such is the condition and aspect of the foreign trade of the country. We do not propose to dwell upon the curious anomaly or vast changes it presents. The banks were influenced only by the wise policy of being prepared for any unforeseen emergency that might arise. The six per cents will sell at home better than the seven and three-tenths. Should exchange run up to the specie point, these bonds can be sold or hypothecated abroad, and drawn against till trade regulates itself, so as to restore the balance in our favor. By this time, we presume, the bonds of the United States could be sold in large quantities in Europe, and even in England if desired. The efforts made to destroy our credit in London were dictated rather by political considerations than to a distrust of our means. They will have very little influence over those seeking investment, and who consult safety and rate per cent., rather than the motives which influence cabinets and court circles. We have no doubt but that the whole of the six per cent. loan just taken could be readily disposed of in Europe; but we presume none will be offered, except upon the contingency assumed, which, apparently, is not

likely to occur. The capital of the country is ample for the wants of our government, and the spirit and patriotism of our people is such that every available dollar, if needed, will be proffered to it. The reduction in imports, fortunately, does not lessen the foreign demand for our products, which will take all we have to sell, and is so much added to our means available for the war. The concurrence of the foreign demand at the period of our domestic troubles is most fortunate. It has saved us from all financial disturbance. Thus far the expenditures made have exerted no tendency to make money scarce. It is more active, but is abundant, and can still be had for commercial purposes at rates as low as have, on the average, for years prevailed.

Baltimore and Ohio Railroad.

The annual meeting of the stockholders of this company was held at the office of the company in Baltimore on the 18th inst. Wm. McKim, Esq., was chosen Chairman, and Joshua I. Atkinson Secretary.

The President of the Company presented the following statement, which was read by the Secretary:

OFFICE BALTIMORE & OHIO R. R. Co.,
BALTIMORE, Oct. 1, 1861.

The charter of the Baltimore and Ohio Railroad Company makes it the duty of the President and Directors to exhibit to the regular annual meetings of the stockholders a clear and distinct statement of its affairs for the preceding year.

In accordance with this requirement, annual reports have heretofore been uniformly submitted.

On this occasion, however, the President and Directors find it impossible to accomplish the usual course, and in view of the condition of the road and the circumstances affecting the entire business of the company—which are too well known to require recapitulation—are obliged to postpone the accustomed statements.

Whilst this delay has become a necessity from the destruction of the bridges and much other property of the Company, especially from Harper's Ferry to Cumberland, and the consequent cessation of the use of the Main Stem between those points, it is hoped that at an early period the entire line can be re-opened.

So soon as this highly important result can be achieved, the Masters of Transportation, of Road and Machinery, will proceed to obtain the requisite data—to ascertain accurately the extent of damages, the state of the supplies—of the road and of the machinery, in order to prepare promptly the reports of their respective departments.

To meet the unprecedented crisis and the difficulties by which the Company has been surrounded promptly, vigorous and continued efforts have been made by the most careful and economical system in every branch of its affairs to protect and promote the interests of the Company. Full preparation is also being made to restore our great artery for effective service at the earliest practicable moment.

It is gratifying and proper to inform the stockholders that the first six months of the fiscal year presented a large, satisfactory and profitable traffic, and that notwithstanding the interruption of its business, the large destruction of its property, and the grave and varied embarrassments complicating the management, the Board have been able to meet all the engagements of the Company, and expect to continue to maintain its credit and financial position at that high, and reliable standard so important to all the great interests involved.

The full report of the affairs of the Company for the fiscal year will be furnished as early as the requisite statistics shall be obtained.

By order of the Board,
J. W. GARRETT, President.

After the statement had been read the meeting adjourned to proceed to the election of Directors for the ensuing year, and the following persons were chosed: John Hopkins, Samuel W. Smith, Francis Burns, William A. Hack, John Spear Nicholas, John Gregg, C. Oliver O'Donnell, James Harvey, Richard H. Miles, William Heald, Galloway Cheston, William W. Taylor.

The only changes were in the cases of Messrs. Wesley Starr, Henry A. Thompson and Allen A. Chapman, who declined a re-election, and in whose places were put Messrs. Galloway Cheston, William Heald and William W. Taylor.

Louisville and Nashville Railroad.

REPORT OF THE COMMITTEE APPOINTED AT THE STOCKHOLDERS' MEETING, OCT. 1, 1860.

The undersigned, of the Committee to whom was referred, at the Stockholders' meeting in October, 1860, the proposition of the President and Directors of the Company for the establishment of a sinking fund, for the payment of interest and principal of the debt contracted in the construction of the road, and the proposition of Governor Helm upon the same subject, have considered the same, and report that, in their opinion, it would be prudent and proper to provide out of the net earnings of the road for the payment of the interest of the debt as it accrues, and also for the payment of the principal at maturity, to maintain the credit of the company, and prevent any large amount remaining unpaid, and thereby hazard the enforcement of the lien and a sale of the road, to the destruction of the interest of the stockholders.

They find the mortgage debt of the Main Stem to be $2,000,000, issued in bonds of $1,000 each, bearing seven per cent. interest, payable semi-annually, 1st January and 1st July, and dated 1st July, 1858, and falling due as follows:

100 *a*	7½	years, due Jan. 1,	1866	$100,000
100 *a*	8½	" "	1867	100,000
150 *a*	9½	" "	1868	150,000
150 *a*	10½	" "	1869	150,000
150 *a*	11½	" "	1870	150,000
150 *a*	12½	" "	1871	150,000
200 *a*	13½	" "	1872	200,000
200 *a*	14½	" "	1873	200,000
200 *a*	15½	" "	1874	200,000
200 *a*	16½	" "	1875	200,000
200 *a*	17½	" "	1876	200,000
200 *a*	18½	" "	1877	200,000

There is also a statutory lien in favor of the State of Tennessee, on the forty-five miles in that State, for the sum of $560,500, for that amount of State bonds loaned the company, bearing six per cent. interest, payable semi-annually, $405,500 falling due January 1st, 1892, and $155,000 1st January, 1898, and a debt of $1,000,000 of city of Louisville bonds of $1,000 each, bearing six per cent. interest, payable semi-annually, loaned the company, and falling due, $500,000 April 1st, 1886; $250,000 October 1st, 1886; $250,000 April 1st, 1887.

They find the debt of the Lebanon Branch as follows:—$225,000 Louisville City bonds, bearing six per cent., payable semi-annually, loaned the company, say $90,000, due 2d June, 1886, and $135,000 2d November, 1886, and $175,000 income bonds, bearing seven per cent. interest, payable semi-annually, and becoming due, 25,000 2d March, 1862; $25,000 2d June, 1862; $50,000 2d June, 1863; $50,000 2d June, 1864; $25,000 2d March, 1865.

They find the mortgage debt of the Memphis Branch to be $300,000, bearing seven per cent. interest, payable semi-annually, and becoming due, $50,000 May 1st, 1870; $50,000 May 1st, 1871; $50,000 May 1st, 1872; $50,000 May 1st, 1873; $50,000 May 1st, 1874; $50,000 May 1st, 1875; and a floating debt of $348,076 24, viz: Main Stem, $285,964 89; Lebanon Branch, $520.40; Memphis Branch, $61,586 95—$348,076 24.

They also find, from the report of A. Fink, Superintendent of Machinery and Road Department, that it will require the sum of $806,185 85 to complete the Main Stem and Branches, and fully equip them as first class roads, viz:

For the Main Stem	$613,314 62
For the Labanon Branch	62,871 23
For the Memphis Branch	130,000 00

They have referred to the last report of the President and Directors to the Stockholders, as to the question whether there is any difference in the rights of those who subscribed stock that was applied to the Main Stem, and of those who subscribed stock that was applied to a branch, on page six of that report, and have examined the charter and stock subscriptions, and are of opinion that their rights are equal and identical.

They have also examined the charter and its amendments as to the question raised in the resolution of Governor Helm, as to whether the rights, credits or profits of the Main Stem can be used or made liable for any debt or liability created to construct a branch, and *vice versa*, and the last report of the President and Directors upon that question, at page 6 and 7 of said report, and have verified the facts there stated, and come to the conclusion that the debt incurred in the construction of the Lebanon Branch was properly the debt of the company, and for which all the property of the Main Stem was liable, notwithstanding the 13th section of the amended charter of the 13th December, 1855; and that the company is as justly bound to provide for the existing debt of that branch as they are for the existing debt of the Main Stem; consequently, that there is no legal objection for providing for the payment of the interest and principal of that debt out of a sinking fund of the net earnings of the Main Stem and that branch.

They have made an examination of the cost of the Memphis Branch, its mortgage and floating debt, uncollected stock, and unsold mortgage bonds, and its probable business, and are of opinion that the assets and income of that Branch will prove sufficient to pay its interest, floating and mortgage debt, as it matures, and that there can be no objection to constitute a sinking fund out of the net earnings of the Main Stem and both the branches for the payment of the interest and principal of all the debts of the company; consequently, they deem it unnecessary to constitute a separate sinking fund for the payment of the interest and principal of that branch.

The annual interest of the mortgage debt of the Main Stem is	$140,000
Louisville City bonds	60,000
Tennessee State aid bonds	33,630
Lebanon branch income bonds	12,250
Louisville City bonds loaned that branch.	13,500
Memphis branch mortgage bonds	21,000
Interest on floating debt, and exchange, less interest on unsold bonds.	19,620
Total	$300,000

It will require $25,000 per month of net earnings to pay the interest on the debt until the amount shall be reduced by the payment of the floating debt, and the maturing lien debt.

To discharge the interest and principal debt as it becomes due, will require at least $400,000 per annum. A judicious and prompt application of such a fund would certainly prove sufficient to pay the interest and principal of the debt in the course of thirty years, and would accomplish it at an earlier day, provided the securities could be discharged in advance of their maturity at the current rate of discount now existing, or which in all probability will continue to exist. If, however, they should have to be paid off at their par value, the sinking fund would have to be aided by additions from the earnings, or by extending the debts.

The Committee propose the stockholders shall direct a sinking fund of $400,000 per annum of the net earnings of the road and branches, to be ex-

tablished for the payment of the interest of the debt, and the application of the surplus of the $400,000, after paying interest, and the residue of the net earnings, to the payment of the floating debt, and the completion of the road, until the floating debt is paid and the road finished, and then the surplus of the sinking fund to the payment of the principal of the debt, and the surplus earnings over the $400,000 to dividends amongst the stockholders, except in those years such overplus shall be needed in aid of the sinking fund for the payment of the mortgage debt, and that the sinking fund be under the management and control of the President and Directors of the Company; and further, that in making the annual report to the stockholders of the receipts and expenditures in operating the road, a report of the operation and effect of the sinking fund be also made to the stockholders.

The Committee also recommend that the stockholders accept as a part of the charter of the company, the act of the Legislature of Kentucky, approved the 16th day of May, 1862, entitled, "An act to amend the charter of the Louisville and Nashville Railroad Company," and which is as follows:

"SEC. 1. *Be it enacted by the General Assembly of the Commonwealth of Kentucky*, That the Louisville and Nashville Railroad Company is authorized to withdraw by purchase fractional shares of stock and of interest scrip, and to sell fractions to make full shares; and is also authorized to increase the capital stock of said company to an amount sufficient to represent the full cost of the road and branches in stock; also to liquidate any of the mortgage and other debts of the company by the issue of preferred stock entitling the holders to dividends at the rate of four per cent. half yearly on such stock.

"SEC. 2. This act to be in force when accepted by the stockholders at any regular or called meeting."

And that the President and Directors be authorized to purchase the fractions as provided in said act at the current market price thereof, and to resell them to those who desire to make full shares of stock at the same rate.

The Committee also recommend, in order to prevent the further accumulation of interest stock after the 1st of April, 1862, that in accordance with the charter, a dividend of one quarter of one per cent., payable in stock, be made as of the 1st of January, 1862, except the part of the dividend that may be payable to the county of Davidson on its stock, be credited to the $6,000 interest on its bonds for the years 1853–4, in accordance with the agreement between said county and the company.

They find the stock and stock liabilities of the company on the 1st of July, 1861, amounts to the sum of $5,631,469 65, as follows, to wit:

Main Stem	$4,384,602 99
Lebanon branch	509,842 19
Memphis branch	737,024 47

Add to the above $358,530 35, the estimated interest on the stock bearing interest, and a stock dividend of one quarter of one per cent., will make the stock of the company about $5,990,000.

One million dollars of the above stock is to be cancelled on company's paying the interest and principal of that amount of City of Louisville bonds advanced to the company under a contract to that purport.

When the company complies with said contract, the stock will be reduced to $4,990,000, and by adding that amount to the debt of the company, will stand $4,608,076 24-100, and make the stock and debt $9,598,076 24-100.

The Committee also recommend that it be left to the discretion of the President and Directors to make stock dividends from time to time, so that the debt and stock may represent the cost of the road, less the discount on county and company bonds.

War Loan, due January 1, 1896	$500,000
Temporary War Bonds, due in 1878	50,000
Total debt	$2,885,177

The act authorizing the War Loan provided for the issue of $1,000,000. Not more than $500,000 will probably be issued.

Richmond, Fredericksburg and Potomac Railroad.

This Company was chartered on the 27th February, 1834, with a capital of $700,000 and power to increase it to $1,000,000, and authorized to construct a railroad from Richmond to Fredericksburg and thence to some point on the Potomac river. The State subscribed two-fifths of the stock. The charter was made perpetual and the capital exempted from taxation. The company was organized in June 1835. In December following the section between Richmond and North Anna river was placed under contract, and the remaining distance to Fredericksburg in the following year. On the 13th February, 1836, the road, extending from Richmond to the South Anna river, 19½ miles, was opened for public use, and on the 15th May thence to the North Anna, 25¼ miles. On the 15th June of the same year it was completed to Chesterfield, 28¾ miles, on the 2d August to Mattapong, 36½ miles, on the 14th September to Milford, 39½ miles, and on the 26th October to Downer's Bridges, 46½ miles from Richmond. The line was completed to Fredericksburg early in 1837. In the same year the road between Fredericksburg and the Acquia Creek was placed under contract; but for want of

funds and other interpositions was not completed until December, 1842. On the completion of the road to the Potomac an arrangement was made with a steamboat line for the conveyance of passengers between the northern terminus and Washington. In 1844, a partial consolidation with the Washington and Fredericksburg Steamboat Company was effected, the railroad company purchasing half the Steamboat Company's stock and agreeing to pay for its services one-fourth of the joint earnings. This allowance was subsequently raised to 30, and finally to 33⅓ per cent. In 1850, the company commenced to re-lay the road with a heavier rail, putting down a flat bar 2½ inches wide by ¾ inch thick. The original rail was 2 inches by ½ inch and at an early period had become much worn. The whole length of the road was re-laid within the next two years. The necessity of a still more substantial superstructure, however, was soon apparent, and in 1853, the company determined to re-construct to road, with an edge-rail weighing 54 pounds to the yard. The change was gradually made during the years 1854, '55 and '56. On the opening of the Louisa (now Virginia Central) Railroad in 1837 an arrangement was made with the Richmond, Fredericksburg and Potomac Company whereby the latter agreed to operate the road and take one-third of the passenger and one-half of the freight and mail earnings for its services—the Louisa Company agreeing to keep the road in repair, etc. At a subsequent date, the rate paid for operating the road was changed to one-half of the gross earnings from all sources. This agreement terminated on the 1st July, 1847, and from that date the Louisa Company conducted its own transportation, paying for the use of the road between the junction and Richmond a fixed compensation. In 1851, the company completed an independent road between these points.

The capital stock authorized was $2,000,000 in 20,000 $100 shares; of this, $275,200 was subscribed and paid in by the State; and $766,680 by individuals—making the total amount paid in, $1,041,880, of which $998,180 is common and $43,700 guarantied stock.

The funded debt of the company amounts to $643,960, as follows, viz:

State loans, 6 per cent.			$111,456
" " 7 " "			9,632
General " 6 " "			324,808
" " 7 " "			198,069
Total			$643,960

The total amount of State loans is $121,088; of general loans, 522,872—of these, $436,259 are at six, and $207,701 at seven per cent. The following is a description of the bonds:

Six per cent. sterling bonds, $68,808—issued in November, 1836, and payable, principal in 25 years, and interest semi-annually in January and July in London.

Six per cent. sterling bonds (exchanged for old sterling), $52,000—issued in May, 1859, and payable, principal in 25 years and interest semi-annually in January and July in London.

Six per cent. dividend certificates, $21,000—issued in November, 1855, and payable, principal in 20 years and interest semi-annually in May and November in Richmond.

Six per cent. dividend certificates, $29,233—issued in May, 1847, and payable, principal in 10 years and interest semi-annually in January and July in Richmond.

Six per cent. dividend certificates, $265,217—issued at various dates and payable, principal in 1869, and interest in January and July in Richmond.

Seven per cent. bonds, $172,800—issued in May, 1859, and payable, principal 15 years, and interest semi-annually in January and July in Richmond.

Seven per cent. dividend certificates, $34,901—issued in May, 1859, and payable principal, in 20 years, and interest semi-annually in January and July in Richmond.

The road is 75 miles in length, extending from Richmond, Va., to Acquia Creek. It has no second track. Sidings and turn-outs about 4½ miles. The company also operate the New York and Richmond Coal Company's railroad from Hungary, 8 miles above Richmond, to the mines, 3½ miles.

The equipment of the road consists of 10 first class and 5 second class 8-wheel passenger cars; 9 baggage, express and mail cars; and 195 cars for freight, etc. The following is a description of the bridges, buildings, superstructure, etc.

Bridges—lattice 9 (17 spans, 2,596 ft.); trestle 2 (14 spans 213 ft.); stone 1 (1 span 40 ft.)

Crossings—farm 101; road 37; street 17; railroad 1—total 156.

Switches—single 37.

Gauge of track—four feet, eight and a-half inches.

Culverts—box 154; arched 22—total 176.

Cross-ties—number per mile 2,600; dimensions 8 feet by 6 and 9 inches: oak.

Chairs—material: wrought iron; average weight 7½ lbs., number per mile 550.

Rails—length 18 to 20 ft.; weight per yard: 62 miles 50 lbs. T; 1¼ miles 54 lbs. U; 11¾ miles 18 lbs. flat.

Buildings—passenger houses 3; freight depots 8; repair shop 1; water stations 13; engine houses 4 (14 stalls); wood sheds 9; dwellinge 20; turn-tables 30; car houses 5.

During the 25 years included in the following statement, the aggregate gross earnings from passengers was $3,598,015, from freight $962,887, and from mails, etc., $539,365—making a total of $5,100,267; the current expenditures during the same time were $2,647,588; and the earnings less expenses, $2,452,679. The amount disbursed in dividends was $1,171,982, or 137 per cent.—of which 109 was on common and 28 per cent. on preferred stock. The average cost of road and equipment has been $1,486,642; the average mileage 70; and the average amount of capital stock $899,115.

American Railroad Journal.

Saturday, November 23, 1861.

Share and Money Market.

The share market the first of the week was very buoyant under favorable news from all quarters of military successes. The upward movement was aided by the negotiation of the third $50,000,000 of the Government loan. The capture of Slidell and Mason, though giving the highest satisfaction to the public generally, created an uneasy feeling and caused a heavy decline at the Stock Exchange. This fall is an indication of the sensitive condition of the market, rather than of any real apprehension of trouble abroad. The conviction is almost universal that the arrest of Messrs. Slidell and Mason was strictly legal; and if not, that it cannot possibly lead to any political complications with England. Still during the war we must expect to witness great fluctuations, often without any apparently adequate cause. In all other respects the condition of affairs is favorable. Money is abundant. The weather continues unusually favorable for the movement of produce from the interior, no snow having fallen, and no ice having yet made on the canal or lakes. Immense amounts are coming forward by all the routes. The earnings of the Erie Railroad for October, is a good index of the activity of our internal trade. The condition of the foreign trade of the country is most favorable, as will appear by statements which we publish elsewhere.

The Galena and Chicago Union Railroad Company have declared a dividend of five per cent., payable January 1, 1862, in New York.

Judge Drummond of the Chicago Circuit Court, has passed an order accepting the resignation of Charles Congdon, one of the Receivers of the St. St. Louis, Alton and Chicago Railroad, and appointing James Robb sole Receiver of the Corporation.

The Pittsburgh, Fort Wayne and Chicago Railway have three "locomotive cars" now successfully running in the passenger traffic—these combine the locomotive and passenger coach. One of them, during five months ending with Sept. 30, ran 12,000 miles, at a total cost, for repairs, fuel, stores and train service, of $1,328 45—an average of only 11.06 cents per mile run. Another of them is employed as a paymaster's carriage, and a third has recently been placed in the passenger traffic.

Mr. John Corning, of Buffalo, has been appointed superintendent of the western division of the New York Central Railway, in place of Job Collamer, recently deceased.

Gangs of hands are scattered along the line of the Chicago and Rock Island Railroad, putting substantial stone abutments and piers beneath the most important bridges that have not been previously thus built. New iron is also being laid and the track well ballasted. Twenty new grain cars are being constructed to meet the necessities of the road.

The earnings of the Erie Railway for October are $178,000 larger than for any previous month this year. At this rate of increase, the current fiscal year will show an increase on the last, of about $1,400,000. The road will also have this winter the advantage of the Long Dock improvement, which in deep water, and without embarrassment from ice, gives them facilities for loading and unloading freight with but moderate increase of expense.

It is reported that the earnings of the Erie during the first half of November were not less than $500,000. Both the Erie and Central are expected to earn a million dollars this month. The rates of freight were never as high as they are at present, and the amount of produce offering is far beyond the capacity of the roads to move.

The New Loan and the Banks.

The banks are likely to be well rewarded for their patriotism and pluck in assuming, at one of the darkest periods in the history of the rebellion, the responsibility of supplying government with the means for suppressing it. They have taken their proportion of the $50,000,000 six per cent. 20 years loan, at a price that will produce seven per cent., which is about 91.50. The average prices of government 6s from 1849 to 1860 were at least as high as 116, or 24.50 above what the banks have just purchased the 20 year loan at. The probabilities are that, for the next 12 years, the rates for money will rate lower than for the past 12. In a comparatively short time this very loan will sell at rates that will not yield the purchaser over 4½ per cent. The securities of all stable governments command higher prices than any other, for the very good reason that the greater includes the less. The aggregate must be stronger than the individual. Below we give the highest quotations for United States 6s from 1842 to 1860.

Years.	Highest quot. for U. S. 6s.	Years.	Highest quot. for U. S. 6s.	Years.	Highest quot. for U. S. 6s.
1842	100	1849	113¼	1855	118¾
1843	118¾	1850	122	1856	118¾
1844	115	1851	122¼	1857	118¼
1845	114	1852	121	1858	115¼
1846	112	1853	124	1859	112
1847	108	1854	123¾	1860	109
1848	108				

The banks, if they should hold the loan just taken, would realize at least 20 per cent. premium upon it. This would carry the price up to nearly 111.50. They have made largely out of their transactions with government, and have probably pretty fully repaired their losses growing out of the rebellion. The following

are the quotations for their shares at the Stock Exchange, November 18, 1861:

	Bid.	Ask.		Bid.	Ask.

Movement of Breadstuffs.

The receipts at tide water of grain, from the opening of the canals to and including November 4, have been as follows:

	1861.	1860.	1859.
Canal opened	May 1.	April 25.	April 15.
Flour, bbls.	1,221,200	1,051,900	640,600
Wheat, bush.	25,054,700	15,771,700	3,532,200
Corn, bush.	20,559,600	13,409,300	2,488,700
Oats, bush.	4,806,900	5,948,600	4,677,500
Rye, bush.	725,000	304,600	320,000
Barley, bush.	1,703,900	2,393,000	1,900,200

The comparative movement for the two years has been as follows:

	Flour, bbls.	Wheat, bushels.	Corn, bushels.	Barley, bushels.
1860	1,051,900	15,771,600	13,409,300	2,398,000
1861	1,221,200	25,054,700	20,359,600	1,703,900
Incr.	169,300	9,283,100	7,150,800	Dec. 690,100

Railroad Earnings--Weekly.

The earnings of the Galena and Chicago Railroad the 2d week in Nov., 1861, were....$41,862
Do., 1860..... 49,031

Increase....$7,169

The earnings of the Toledo, Wabash and Western Railroad the 1st week in November, 1861, were....$30,845 03
Do. 1860..... 18,638 32

Increase....$12,206 76

The earnings of the Chicago and Rock Island road, the 2d week in Nov., '61, were....$28,618
Do. 1860..... 22,167

Increase....$6,451

The receipts of the Grand Trunk Railway of Canada for the week ending Nov. 9, were..... $96,226 50
Corresponding week, 1860..... 81,847 15

Increase in 1861....$14,379 35
Total traffic from July 1st, 1861....$1,324,817 36
Corresponding period previous year. 1,292,003 00

Increase....$32,814 36

The earnings of the Michigan Central Railroad for the 2d week of Nov., 1861, were..$61,167 30
Do., 1860..... 49,149 78

Increase....$12,017 57

The receipts of the Chicago and Northwestern Railroad for the 1st week of November, 1861, were.....$19,089 86
Do. 1860..... 19,105 49

Decrease....$15 63

The earnings of the Cleveland and Toledo Railroad for the 2d week in November, 1861, were.....$20,378
Do., 1860..... 20,020

Increase....$353

The traffic of the Great Western Railway of Canada for the week ending Nov. 15, 1861, was as follows:

Passenger	$18,333 13
Freight and live stock	31,702 27
Mails and sundries	1,371 63
Total	$51,407 03
Corresponding week of last year	48,357 09
Increase	$3,049 94

Railroad Earnings--Monthly.

The earnings of the Erie Railroad for the month of October, were $722,362 05

The Pennsylvania and Philadelphia and Erie Railroads.

At a meeting of the stockholders of the Pennsylvania Railroad Company, held in Philadelphia on the 15th inst., the lease of the Philadelphia and Erie Railroad to the Pennsylvania Railroad Company, as agreed upon by the Directors of the two companies, was substantially ratified and accepted. Subsequently there was a meeting of the stockholders of the Philadelphia and Erie Railroad Company, which also ratified and accepted the lease, so that the Philadelphia and Erie road is now virtually sold to, and is a part of the assets of, the Pennsylvania Railroad Company, by which Company it will be completed and put in active operation in the shortest time possible.

Reading and Columbia Railroad.

The stockholders of this company have decided, by a unanimous vote, to authorize the President and Board of Directors to *issue bonds* to enable the company to build the eastern end of the road, from Ephrata to Reading. Twenty miles of the road are nearly ready for the laying of the track. By a close estimate, the whole road, about 43 miles in length, via Adamstown, can be graded and bridged for less than $300,000; making the whole expense, for iron, track and all, with water-stations, about one million of dollars—the cheapest road in Pennsylvania, and one of the most useful and advantageous to the citizens of Lancaster county. Take the item of coal alone, and consumers along the line, and in the city of Lancaster, will save $150,000 per annum, by procuring their supplies from Pottsville. The city of Lancaster consumes yearly 100,000 tons, the price of which is $4 50; while in Reading the same sells for less than $3 per ton. If, then, the citizens of Lancaster study their own interest, they will at once go to work and build their branch connecting with this road, as the saving in the price of coal alone, will pay the expense in about one year, beside securing a direct route to New York, by way of the East Pennsylvania Railroad.

That the eastern end of this road will be immediately put under contract, there is not a shadow of a doubt; the stockholders being resolved to have it completed forwith.—*Reading Gazette, Nov. 2.*

New Brunswick and Canada Railway.

We learn from the St. Andrews, (N. B.) *Standard* that on 11th ult., the cars started for the first time, from Rankin's Mills, 10 miles from Canterbury, and about 20 miles from Houlton. The energy displayed in pushing forward the new work on the railway is creditable to the contractors, Messrs. Walker, Johnston & Co., and it is believed that before December the line will be in running order to within a short distance of Houlton. The trip from Woodstock to St. John by rail and steamer can now be accomplished in seven hours.

Journal of Railroad Law.

ACTS OF GOD OR INEVITABLE ACCIDENTS: WHEN COMMON CARRIERS ARE LIABLE FOR INJURIES RECEIVED FROM THEM; SPAULDING'S EXPRESS A COMMON CARRIER.

The case of *Read et al. vs. Morrell B. Spaulding* was recently argued, and decided by the Superior Court of the City of New York. The action was brought to recover compensation for damages received by the plaintiff's goods which were delivered to "Spaulding's Express Freight Line," on the 27th of January, 1857. The goods consisted of eighty-six cases and were to be carried to Louisville, Ky., and eighty-one of them were duly carried and delivered at Louisville twelve or fourteen days afterwards; but the balance of five cases did not arrive at Albany until the 7th of February, when they were put into depot D of the New York Central Railroad Company to be forwarded to their destination. On the night of the 8th and the morning following (Sunday) there was a heavy flood in the Hudson river, the water suddenly rising during the night and morning, some four feet higher than it had ever risen before, and by said flood the goods were wet and damaged. The contract under which the goods were taken by the defendant provided that the goods were "to be forwarded by Spaulding's Express to" Louisville without liability for damage "if delivered in the Louisville depot in good order," without liability "for wrong delivery of goods marked by initials," or "for wrong carriage of goods that are imperfectly marked," and in case of loss or damage for which Spaulding's Express may be liable, stipulated that the latter shall have the benefit of any insurance effected by the owner; and that no risk was taken over the 200 dollars on any single package. One of the cases contained 17 packages consisting of wooden boxes, each closed up and holding goods. The case was a rough box, having openings wide enough to insert one finger, and through which the packages could be seen.

The action was tried before Justice Bosworth; and judgment was directed for the plaintiff for $681 83. A number of exceptions were taken at the trial, which raised the questions herein decided, and an order entered directing them to be heard in the first instance by the General Term of the court.

We print so much of the opinion of the General Term, delivered at the decision of the case, as embodies the points decided.

WOODRUFF, J.—It was admitted on the trial of this action that the goods in question were delivered by the plaintiffs and received by the defendants at the city of New York under the contract set forth in the case and called a bill of lading.

By that instrument the defendant declares that he received the goods to be forwarded to the place named in the bill of lading, Louisville; and that all the property shipped on that bill of lading will be delivered at the depots of the company or steamboat landing; and in providing against liability for deficiency in packages, it is agreed that no such liability shall exist if the goods "are delivered at Louisville depot in good order;" and the stipulation in respect to amount of freight plainly embraces the compensation to be made to the defendant for the entire transportation from New York to Louisville. The admission on the trial that the defendant received the goods in connection with this contract, imports that the expression, "Spaulding's Express Freight Line" and "Spaulding's Express," meau the defendant M. B. Spaulding.

Upon these facts we have no hesitation in saying that the defendant undertook to carry the goods, aud was not a mere forwarder whose duty consisted only in receiving and delivering the goods to others to be carried.

The next question urged upon our attention by the counsel for the defendant, is whether the injury to the goods happened under circumstances or from causes for which the defendant is responsible.

Unreasonable and unexcused delay in the transportation, and actual injury resulting therefrom, are the grounds upon which it is sought to charge the defendant. If in the due discharge of his duty, he had the goods in the regular and usual course of transportation, so that their being in the depot at the time was proper, their injury by the action of an extraordinary flood rising higher than any flood had ever risen before, which it was no negligence or breach of duty not to anticipate, and from which, when the rise of water became apparent, the goods could not be delivered, is an injury by the act of God in such sense that the carrier is excused.

But the defendant had violated his duty and broken his contract and was under the actual pressure of fault and neglect without which the goods would have been safe.

It was the duty of the defendant to deliver all the goods within a reasonable time, and according to the usual course of business over the route by which they were to be transported. There is nothing in the case to indicate that the eighty-one cases which were so delivered, were forwarded with any extraordinary or unusual speed, but the proof is that from ten to fifteen days is the usual time of conveyance. The presumption is, therefore, that if the defendant had performed his duty, the five cases which are the subject of controversy, would have reached Louisville at or about the same time with the others.

The result is that the defendant was grossly negligent in the performance of his duty; this delay was a breach of his contract to carry and deliver within a reasonable time, and while so in fault, the goods in his charge were in the night of Sunday the 8th, or on the morning of the 9th of February reached and injured by the extraordinary flood already mentioned.

But the defendant insists that if the defendant was in fault in respect to the delay which has occurred, he is nevertheless not liable for the damage complained of, that in such case, though the carrier be liable for delay, he is only liable for the immediate consequences of delay by which he is understood to claim that he is liable only for such damages as the plaintiffs sustained, irrespective of the injury to the goods by being wet in the flood at Albany, and, therefore, his damages are to be ascertained by assuming for the purposes of the assessment that the goods arrived safely, though not until long after the time when they should have been delivered.

This claim rests upon the ground that the delay was not the proximate cause of the injury. *Causa proxima non remota spectatur.*

The delay certainly did not cause the flood. But we think that the defendant cannot find protection in this view of his responsibility. His unexcused neglect of duty did expose the goods to the peril, and when the defendant was found in actual fault, he lost the protection from liability by inevitable accident which the law extends to the carrier in the due performance of his undertaking. For the moment his faulty negligence began, he became an insurer against the consequences which might result therefrom whether ordinary or extraordinary. A common carrier, in order to claim exemption from liability for damages done to goods in his hands, in course of transportation, though injured by what is deemed the act of God, must be without fault himself, his act or neglect must not concur and contribute to the injury. If he departs from the line of duty and violates his contract and, while thus in fault and in consequence of that fault, the goods are injured by the act of God, which would not otherwise have caused damage he is not protected. The defendant was bound to deliver the goods in a sound condition. If prevented by the act of God, he is excused; but if his own misconduct contributed to the injury, the exposing the goods needlessly or improperly to the peril, his excuse fails. All ordinary perils from even the act of God he was, even while engaged in the faithful performance of his duty, bound to foresee and guard against by the exercise of a care and diligence proportioned to the danger. He was not bound to anticipate and guard against extraordinary perils which human foresight would not anticipate; but it was his duty to do nothing which should expose the goods to any perils which would not arise in the proper and diligent prosecution of the journey which he had undertaken, and if he by needless delay subjected the goods to damage from whatever cause concurring or co-operating therein he is liable. This we believe to be in accordance with sound policy just in its operation and sustained by the weight of authority.

The defendant is we think liable and the plaintiffs were entitled to recover. A point was suggested on the hearing of the exceptions, though not argued by the counsel relating to the amount of the damages and entry on the margin of the contract called the bill of lading was in these words; "No risk taken over $200 on any single package." One of the five cases which were injured, contained seventeen packages, and the damage to the whole seventeen packages amounted to $438 88. It is claimed that no more than $200 should be allowed for the injury to the whole seventeen packages. It is obvious that according to the very terms of the memorandum $200 being allowed on any single packages, that sum might within the provisions of the contract be allowed on each of the seventeen packages unless the word "package" in used in a different sense in the statement of the facts agreed upon by counsel from its meaning in the contract which forms a part of that statement.

This we cannot say. Again the packages thus forming one case were inclosed in a rough box having openings through which the packages could be seen.

The defendant therefore knew when he was receiving the case that he was receiving several packages though inclosed. It does not seem to us, that securing several small packages in this manner, so that they were more conveniently carried, when the carrier knew or might by ordinary inspection have known, that he had received not one single package, but seventeen small packages, should render the liability of the defendant any less than it would be if the seventeen packages had been separately delivered.

The plaintiff should have judgment on the verdict. Ordered accordingly.

Commerce of the Port of New York.

The imports, exclusive of specie, into the port of New York from January 1, 1861, to the second week in November have been $112,629,123
Imports same time last year 206,057,343

Decrease $93,428,210

The exports of domestic produce, exclusive of specie, have been $117,742,798
Exports same time last year 85,527,845

Increase $32,214,952

The difference in general merchandize in our favor has been $125,643,162.

The specie movement has been as follows:

Foreign gold entered at this port $36,307,000
Foreign gold entered at Boston on New York account 7,711,000

$44,018,000
Add receipts from California 30,998,000

Total imports $75,016,000

The imports for same period last year were:

From California $29,945,000
From abroad ..... 2,030,000— 31,975,000

Increase $43,041,000

Statement by months of the imports and exports, inclusive of bullion, at the port of New York for the first ten months of the year:

	Import of foreign goods— 1861. From Jan. 1.	vs. 1860. From Jan. 1.	Export of dom. prod.— 1861. From Jan. 1.	vs. 1860. From Jan. 1.
January	$19,565,000	$21,528,000	$10,276,000	$9,289,000

Suspension Girder Bridges for Railway Traffic.

The construction of four new bridges across the Thames, completed or in process, in the short distance between Hungerford Pier and Chelsea Reach, and designed on the several systems of suspension chains, arch, arch-girder, and girder, has the effect of bringing obviously before the eye of the public the working out of different theories of construction, which would otherwise be rather of a scientific or professional than of a general interest. It may therefore prove not unseasonable, nor perhaps wholly unprofitable, to dwell a little on the subject handled by Mr. P. W. Barlow, F. R. S., in his paper read before the British Association at Oxford.

Is it expedient, in the construction of bridges of large span for railway traffic, to employ chains, relying on a girder platform to reduce within safe limits the wave that inevitably accompanies the transmission of a rolling load over a common suspension bridge?

The question has been put to a practical test in Mr. Rœbling's railway bridge over the Niagara; where a span of more than 800 feet is crossed by means of wire chains supporting a roadway and railway platform; the two platforms being so connected by means of trussing as to form a deep girder. In traversing this bridge the trains proceed at a foot-pace, and the accounts which reach this country as to the degree of disturbance caused by their transit are somewhat conflicting. Its engineer is, however, understood to be as fully satisfied with the steadiness of the structure as he has every reason to be with the remarkable low cost. There is an additional safeguard against undulation in this bridge; cables being attached under the platform, and anchored to the rock below, thus serving as powerful stays; an excellent precaution, but one for which there would be no facilities in the majority of cases. A peculiar feature is the employment of a distinct set of chains for each platform; the deflection of one pair of chains being thus considerably greater than that of the other. It would follow that on any considerable change of temperature, the chains supporting the upper platform would naturally rise and fall appreciably more than those supporting the lower one; and as these platforms are firmly trussed together, it does not appear in what way the danger is avoided of an undue proportion of the weight of the entire structure being occasionally thrown on one set of chains. The extension of the chains when a heavy load comes on the bridge would tend to bring about a similar result.

There are, therefore, special circumstances about this bold and original work which prevent its being taken as a pattern or sample of suspension railway bridges; and very precise data must be obtained by means of careful observations before any general practical conclusions can be drawn from the success of the Niagara Bridge.

The question, then, of the suitability of suspension bridges with rigid platforms to the requirements of railway traffic, is as yet to be regarded as a matter of opinion; and there are few points on which the opinions of engineers of the greatest eminence and talent are less agreed than on the one now under consideration. The two master-spirits, who have left lasting monuments of their constructive genius in the railways of Great Britain, have strikingly exemplified the divergence of their views, in the bridges erected by the one over the Menai, the Conway, and the St. Lawrence; and, by the other, over the Wye and the Tamar.

The enormous strength and rigidity of the Menai tubes is such, that the addition of suspension chains would be simply useless, if not even detrimental. For the expansion and contraction due to extreme changes of temperature would cause the chains to rise and fall midway between the piers, to an extent to which the tube would not readily adapt itself; so that the main weight of the whole structure would sometimes be carried by the chains and sometimes by the tube. It was well known that Robert Stephenson was no advocate for the use of chains for railway bridges in any case. But, conclusive as the consideration just stated is against the combination of a chain with a beam of the proportionate strength of the Menai tube, it does not apply to a suspension bridge with a platform flexible enough to rise and sink as expansion or contraction may require; and at the same time stiff enough to insure the equable distribution of any partial load over the whole length of the chain.

The bridge over the Wye at Chepstow, and the very similar but more colossal structure over the Tamar at Saltash, have much in common with the description of stiffened suspension bridge so strongly recommended by Mr. Barlow; but are distinguished by two main points of difference. In the first place the tension of the chains is sustained by straining-tubes resting on the summits of the piers, instead of by the ordinary stay-chains; in the second place, the platform girders are very slight, and the wave is prevented mainly by the introduction of iron trussing in the space between the tube and the chain.

Similar diversity of views may be seen exemplified at Chelsea and Hungerford. The massive chains of the new Chelsea Bridge, and the strong *gridiron* arrangement of the suspended girders, defy all the shocks and disturbances of common wheel traffic. At Hungerford a girder bridge is in course of construction, which would exhibit as marked a contrast to the fine suspension bridge of of Brunel, as yet undisturbed, as the Britannia tubes present to the chains of Telford, at Menai. This new work seems to evince, on the part of its distinguished author, a persuasion that the use of chains is inadmissible under any circumstances in railway bridges; for, had it been thought practicable and safe to throw a suspended girder across the span of 670 odd feet, the existing piers would have presented singular facilities; the extent of the foundations being sufficient for a greatly increased width of roadway.

On the other hand, Mr. Barlow records a no less decided judgment on the part of Sir W. Cubitt and himself, that a simple suspension bridge, with a tubular girder roadway, may be traversed by railway trains with perfect safety and small disturbance.

It is therefore sufficiently clear, that if we consult the opinions even of the men most competent to pronounce on such a question, we are led to very opposite conclusions; and until the experiment is actually made on a large scale in some railway bridge, our only remaining resource lies in experiments on models, or in theoretic deductions.

The economy of the ordinary suspension bridge is mainly due to the property possessed by chains of adjusting themselves to any curve of equilibrium required by a new disposition of the load.

In the arch, if a load becomes so distributed as to throw the line of pressure near the edges of the voussoirs, the tendency of the thrust is to cripple the arch and destroy equilibrium. As a rolling load traversed the bridge, the line of pressure (in which the thrust is considered to be transmitted from the crown to the abutments) would, if it could be rendered visible, be seen to waver and distort itself. A bulge or swell would travel along it, raising it perceptibly at the successive points over which the load passed; and elsewhere it would be depressed and flattened. To insure the stability of an arch under all possible conditions, it is therefore necessary to give a far greater depth of voussoir, and consequently to employ a much larger amount of materials than would be demanded simply to sustain the thrust. In girder arches there is a similar necessity for an excessive amount of material, either in the bow itself or in spandrels or in trussing, to arrest change of form.

The effect of tension, on the other hand, is to guide the suspension chain into its position of stable equilibrium; so that if only sufficient play is afforded for spontaneous adjustment, no more material need be used than is required to sustain the simple strain of tension. A second advantage possessed by suspension over the wrought iron bridges results from the whole of the metal being employed to resist a tensile strain, no part being in compression. This causes a saving of material, on account of the strength of wrought iron to resist extension being considerably greater than its strength to resist compression. A third source of economy is one also shared in some degree by arches, and lies in the deep versed sine which can be given to the curve of the chains. The greater the versed sine, or rise, of the chain or arch, the less is the tension or thrust, and consequently the less is the material necessary to sustain it. An analogous reason renders it advantageous to increase the depth of a girder to a certain extent, but within far narrower limits; as the necessity of providing for lateral stiffness as well as the weight of webb or trussing absorbs much of the saving that would otherwise be effected in making girders very deep. A fourth advantage in favor of the suspension bridge is, that the reaction which maintains the tension of the chains is furnished by stay-chains attached to their extremities; while in the girder an upper flanch must be provided, the compression of which reacts against the extension of the lower flanch, giving a double amount of material in flanches alone, as compared with the chain. To all these reasons for the great economy of suspension bridges, add the important consideration that in considerable spans the weight of the bridge itself begins to bear a large proportion to the total load, a proportion which rapidly augments as the length of bridge is increased. It is thus that for spans of 300 or 400 feet the cost of the girder becomes enormously greater than that of the chain, and that suspension bridges can be thrown over spans utterly impracticable for any other kind of structure. Of course, in any viaduct it is of primary importance to avoid large spans as far as practicable. But cases will occur in which it is difficulty or impossible to do so. Must the railway engineer in these cases forego the advantages peculiar to the suspension bridge? Further, in positions where the least practicable span exceeds the possibilities of a girder bridge, is he to reject the only description of structure that will meet the requirements of the case? If it is in the power either of experiment or of analysis to throw any fresh light on this vexed question, the study cannot be deemed unimportant or uninteresting.

Great allowances are necessary in drawing any conclusions as to a proposed work of considerable magnitude from experiments on a model, however carefully conducted. And, in fact, it is almost essential for theoretic analysis to go hand in hand with experiment, to assure us that we are justified in accepting such conclusions as valid guidance for a great work, especially if of a noval character. On the other hand, in analysis, if the reasoning is sound, and if we have ground for believing that nothing has been omitted or misstated in the data, there is a fair presumption of the correctness of the result; and if this result is found to agree with experiment, few will hesitate to admit its truth.

It is therefore now proposed to inquire, what solution theory affords to the problem of the suspended girder; and while doing this it may be useful to note how far the results arrived at accord with Mr. Barlow's experiments. It will then be endeavored to indicate some general practical conclusions. It might have been of great help in such an inquiry to have been made acquainted with the course of reasoning pursued by Prof. Rankine, and to know the process by which the learned professor arrived at the conclusion cited in Mr. Barlow's paper. In the absence of the guidance which such knowledge might have afforded, it is necessary to proceed as upon untrodden ground.

If a weight be placed on any part of a girder suspended from a chain, but having its ends kept from rising at the piers, the chain will be observed to be drawn down by the loaded girder, and the further parts of the chain will be drawn up, drawing with them the girder. The girder will thus assume an S bend, with an additional half-bend in cases when the weight is applied near the half-span. What is the law of this compound displace-

ment? The reason that part of the platform is drawn up when part is deflected, is obvious. The chain is fixed at the ends, and is of a certain length; when a partial deflection takes place, the curvature of the portion of chain immediately affected is increased, and this has the effect of *taking the slack out* of the rest of the chain (the total length being unchanged) by flattening its curvature; which at the same time draws it up, and the platform with it.

First of all, then, the law must be ascertained by which the vertical displacement of any portion of the chain effects the horizontal measurement from end to end. This law is as follows:—Let the variable y be the ordinate of the curve of the chain; and let the vertical displacement of the various points be plotted in a curve, of which the variable x expresses the ordinate. x is therefore, in fact, the total vertical displacement of any point in the chain, and is supposed to be inconsiderable compared with the total rise of the chain.

Let z be the abscissa, or horizontal distance.

Then $\int \frac{dy}{dx} dz$ gives

the total alteration of the horizontal measurement between any two given points of the chain, consequent on the supposed vertical displacements.

If now the wave of displacement of the platform can be resolved into two—namely, first a wave of simple deflection, in which the whole girder would sink under its load if unsupported by the chain, and, secondly, a reflex wave, in which the reaction of the chain pulls up the girder—we shall find the following relation to subsist between these waves. Call their respective ordinates z_1 and z_2: then

$$\int \frac{dy}{dx} dz_1 + \int \frac{dy}{dx} dz_2 = 0;$$

the integrals being taken for the whole distance from tower to tower. Because, apart from the stretching of the chain, which it is unnecessary at this moment to take into account, any other result would involve an alteration of the span, or a break in the continuity of the chain.

(To be continued.)

Rates of Foreign Exchange.

The rates of Foreign Exchange, as quoted by N. BRANDT, Broker, No. 39 Exchange-place, for the steamer of November 23, were as follows:

London—60 days' sight	108½ per cent.
London—3 days' sight	109½ "
Paris—60 days' sight, per dollar..5f.	26¼c.
Paris—3 days' sight, per dollar...5f.	21¼c.
Amsterdam—60 days' sight, per guilder	40½c.
Hamburg—60 days' sight, per marc banco	35¾c.
Frankfort—60 days' sight, per florin	40¾c.
Bremen—60 days' sight, per rix dollar	78½c

OFFICE OF THE NEW YORK CENTRAL R. R. Co.,
Albany, November 1, 1861.

THE annual election for Directors of this Company, and for three Inspectors of the next election, will be held at the Office of the Company, in the Exchange, in the city of Albany, on the second Wednesday (the eleventh,) of December next. The poll will be opened at eleven o'clock in the forenoon, and will continue open for two hours thereafter. By order of the Board of Directors.

JOHN V. L. PRUYN,
Secretary *pro tem.*

5145

LOCOMOTIVES FOR SALE.

THE Boston and Maine Railroad Company have for sale three second hand Locomotives of the following specification and description.

They all have outside cylinders and connections. Cylinders 15x20, four driving wheels, 4 ft. 6 in. diameter, diameter of boiler, 43 in. No. of tubes, 127; length of tubes, 10 ft.; diameter of do., 1¾ in.; weight of engines, about 24 tons each; capacity of tank on tender, 1,500 gall.

The above Locomotives are all in good working order, and are offered for sale on account of the Company having purchased several locomotives of greater capacity. Parties in want of a good machine can have now an opportunity to purchase at a reasonable rate. Application may be made at the office in Haymarket Square, Boston.

WILLIAM MERRITT Sup't.

Boston, Nov. 24, 1860. tf

SANFORD'S MAMMOTH OR GLOBE HEATERS.

The best stoves for RAILROAD DEPOTS and SHOPS, and all places where a great heat is required. They are very durable, and very economical of coal.

Beware of imitations that are inferior in strength and in other respects.

TESTIMONIALS.

HUDSON RIVER RAILROAD OFFICE, N. Y.

This Company have now in use, over two hundred of Sanford's Mammoth Heaters, in Station Houses, Work Shops, and Engine Houses; we commenced using them in 1853, and some of the first stoves put up are still good and in use. We consider them the best Heaters now in use.

J. M. HEBARD, Supply Agent.

UNION FERRY COMPANY.

The Mammoth Heaters have been used by this Company in their waiting rooms at the several ferries and found to be very excellent stoves and more durable and valuable than any heretofore used. CYRUS P. SMITH, Managing Director.

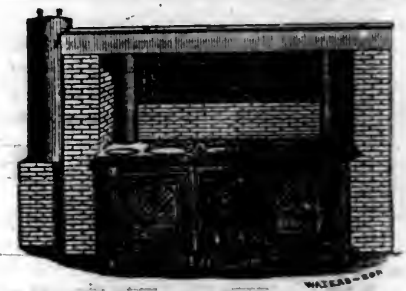
PATENT RIGHTS SECURED

The COSMOPOLITE PARLOR RADIATOR, & GAS BURNER,



Introduced one year ago, already ranks as the LEADING STOVE for PARLORS, SITTING ROOMS, and all places where a soft, pleasant heat is desired.

Fire may be kept all winter with an astonishingly small supply of coal.

Send for description and testimonials.

SANFORD, TRUSLOW & CO.,
Nos. 239 and 241 Water st., N. Y.

Challenge Air-tight KITCHEN RANGES,

May be placed in a fire-place without masonry, and with or without water-back; or may be set out on feet, as an ordinary stove.

This range, already very popular, has the LARGEST OVENS of any in the market; BAKES PERFECTLY, never failing to brown at the bottom; BOILS, ROASTS and and BROILS with unequalled facility and dispatch, and with extraordinary ECONOMY OF FUEL, which may be either coal or wood. Flues large and easily cleaned. A child can manage it, so simple is its construction. Castings extra heavy, and design plain and chaste.

Four sizes, adapted to families and hotels.

Beacon Light SUMMER AND WINTER PORTABLE RANGE,

Is a very popular range, having six boiler holes, one large oven that bakes perfectly, with an arrangement for roasting, or heating irons at the end. It is very economical of fuel. For a FEW DOLLARS a family may be supplied with a PERFECT COOKING APPARATUS, equal to the highest price stove in the market.

Three sizes, adapted to coal, or wood.

SANFORD, TRUSLOW & CO.,
239 and 241 Water st., N. Y.

HEAD QUARTERS, WESTERN DEPARTMENT,
St. Louis, Mo., August 23, 1861.

To Presidents and Superintendents of Railroads, Western Department, United States Army.

THE following is the basis established by the Government for the transportation of troops and supplies for the army:—

Per Passenger per mile (2) two cents for distances moved.

Equipments, munitions and supplies accompanying regiments, first class local rates, which will average about as follows:

30 miles or less	10	cents	per 100 pounds.
50 " "	15	"	"
100 " "	25	"	"
150 " "	40	"	"
200 " "	50	"	"
300 " "	75	"	"
350 to 400 miles not exceeding	90	"	"

For transportation of Horses in small lots, the following are the usual estimated weights of Railroad Companies:

Single animals	3,000	pounds.
2 animals	4,000	"
3 "	5,000	"
4 horses	6,500	"
5 "	8,000	"
6 "	9,000	"
7 "	10,000	"
8 "	11,001	"
9 "	12,000	"

Full car loads, 13 or 14 horses, usually charged 18,000 lbs. All other supplies forwarded by Freight Trains are charged local rates, according to classification of property which will usually average, on provisions and heavy freight, two to three cents per ton of 2,000 lbs. per mile.

Fast freights, immediate transportation, and precedence given to the Government in all cases.

All despatches required by the Government, to be furnished at the actual running cost.

E. H. CASTLE,
Superviser Railroads, Western Department.

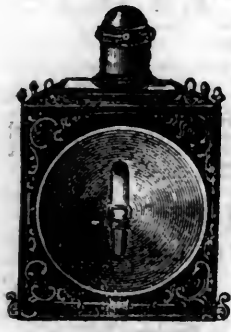
☞ N.B.—Please send a Table of Distances.

BOONTON IRON WORKS.

PATENT MACHINE FORGED

BOLTS AND NUTS.

WE are now manufacturing these goods at our Works at Boonton, N. J.—In the manufacture of the Nuts, the patented device of the "Double Punch," viz, two punches operating from opposite sides towards the centre of the Nut, forces into the body of the Nut most of the Iron which in all other processes is punched out, and also condenses the Iron around the Bolt hole, thus ensuring the greatest strength in the Screw Thread, and making a Nut **SUPERIOR TO ANY** made by hand or the ordinary machine processes. In size they are made according to the standard approved and adopted by our best Machinists and Engine Builders. The mode of making Bolts is such as to produce an upset solid head, perfectly true on all sides, and of uniform size. The Iron used is of our own manufacture, and we guaranty it of superior quality.



We invite consumers to make trial of them, and will furnish **SAMPLES** and **PRICE LIST** on application.

The Foreign Exchanges.

The recent advance in the rates of sterling exchange is attracting attention, and is creating some, though apparently groundless apprehension, lest they should go to the specie point. As gold is among our more important productions, equaling fully $65,000,000 annually, there is no more reason why we should not export a considerable proportion of the product in a time of war as well as in peace. To withhold it altogether, is to refuse to avail ourselves of one of our most important elements of strength. As an article of commerce, gold, being the result of labor, does not differ from wheat or corn. We rely upon the latter, in the crisis, as our own chief support. Why should we hesitate to export a portion of all the products of the labor of our people, (except, perhaps, munitions of war), in whatever form they may exist? There is no reason, except so far that shipment of specie is, in the public mind, evidence of a balance of trade against us—that we are buying more than we have means for payment. It is so short a time that we have been a gold producing country, that we have not outgrown those false dogmas in political economy, that the wealth of a nation is measured by the amount of the precious metals it possesses—assumptions which are fast giving way to the more correct doctrine that this may be in inverse ratio to the amount of these held. There are five dollars in gold and silver in Mexico to one in Massachusetts. Yet the wealth of the latter is twenty times greater than that of the former country. Gold is neither food nor clothing. Its use is in the transfers of these and other kinds of property it enables society to effect. So far as such transfers can be effected without its intervention, an equal amount is added to the public wealth.

At the commencement of the rebellion we had an abundant supply of gold for the commercial wants of the country. The experience of a domestic war was a new one, and it was natural that we should wish to accumulate a large amount of the precious metals for unforeseen contingencies that might arise. But the expenditures which have thus far been made, and which have equaled $150,000,000, have exerted no tendency to create a scarcity, or unusual demand for specie, for the very sufficient reasons that there exists at home, the greatest abundance of all that government needs for the prosecution of the war. It does not increase our dependence upon other nations. If the holders of breadstuffs are willing to take the securities of government in payment for their sales, the use of gold in the transaction is altogether superfluous, just as much as in the vast transactions at the Corn Exchange, where a gold eagle never makes its appearance, but the whole exchanges are effected by checks upon bank credits. Gold and silver are mere agencies to come at what the public needs, and if its wants can be supplied without their use, all the better.

Our experience so far is in exact harmony with this statement. The banks have a much larger amount of specie than when the war commenced. If they pay out $10,000,000 in a lump, it soon filters its way back into their vaults. Government pays it out for food, clothing, transportation, and arms; and as fast as payments are made, the recipients carry the gold to the banks, either in payment of debts or for safe keeping. The operations of government, consequently, have been in perfect harmony with the general routine of business, and exert no tendency to absorb the precious metals in the country. Their general effect has been to stimulate business, and make money really more abundant, as the amount of this, including bank credits, is always in ratio to the transfers of property.

Another reason why the war has had no effect to absorb the precious metal, is the fact that, from the general confidence which prevails, there has been no hoarding by our people. There might have been with short crops, or had the war been upon northern soil. But as no apprehensions have been felt for the future by the community at large, no extraordinary means have been resorted to, to provide against it.

As the condition of affairs in the states loyal to government is healthy and normal, and as the war, which is in effect, waged on a foreign soil, is not a disturbing element, we need feel under no apprehensions as to the effect of moderate shipments of gold. We produce at least $65,000,000 annually. The effect of retaining at home the whole amount raised, would be to convert California into a great curse instead of a great blessing, as it would convert a large proportion of the labor of the country into an article which can neither be eaten, drunk nor worn; and which, except as currency, cannot be made the basis of re-production.

Assuming that we had a supply adequate for the business wants of the country, when California was discovered, and that an addition of $10,000,000, annually, was all that was needed to meet the increased wants for currency and the arts, our interests were promoted in shipping the balance, just as much as shipping an equal value of grain or animal food. They still lie in the same direction. We had an abundance of specie in the country when the war commenced. Since January the imports into this city, over exports, have been nearly $40,823,000. The manifests from California have

equalled $31,827,807; making a total of $72,650,807. To this should be added at least $10,000,000 more received from California through private hands. This is below the estimate of persons having the best means of forming a correct opinion.

We have, then, fully $82,000,000 of specie in the country more than we had on the first day of January last. We can part with one-half this sum, not only without the least inconvenience, but with great advantage to ourselves. The only harm that could result is from the fears that might be created, but which are entirely groundless. We have not yet worked out of our heads the old errors that so long enslaved the world. We are timid, because we are inexperienced. A shipment of a few millions at the present time might be the best thing that could happen, in dispelling an existing, though groundless alarm.

But such an event we do not regard as probable. The condition of our foreign trade shows that specie must still come to us, and will continue to come, though the flow may be affected by extraordinary causes, which are likely to have a very brief continuance. The exports from the port of New York since January 1, 1861, to the third week in November, exclusive of bullion, have equalled $120,542,157, against imports for the same period equalling $112,987,672. The balance in our favor at this port, so far, is $7,554,485. This will be greatly increased by the close of the year. For the same period in 1860, the imports into this port over exports were $119,912,465; the imports being $208,695,203; the exports $88,782,738. Adding excess of imports last year to the excess of exports this, the change in our favor has been $126,466,950. The corresponding change in the movement of specie has been equal to $82,280,000; the exports from this port the past year having been $41,457,000 and the imports over exports, the present, $40,823,000.

The causes of this extraordinary change are still operating in their full force. Of the total imports the present year, $78,000,000 were for the first six months of the year. For this period the imports were at the rate of $3,000,000 per week. The rate for the last half of the year has been only about one half as great. At the rate for the last half of the year, the imports into this port for 1862, will not be over $80,000,000—a sum $60,000,000 less than the exports of domestic produce from it for the year. An important addition is always to be made to the value of our exports, being the freight of produce exported, nearly all of which is in American bottoms.

Shipments of gold cannot take place, apparently, resulting from the condition of our foreign trade. If there is any movement, this must be from extraordinary causes, the most potent of which is the return of securities for sale. We do not apprehend such a movement to any considerable extent. Prices here are far below their ordinary range. The finances of the several States were never in a more prosperous condition. The value of railway property in the North is steadily improving. The earnings of our railroads were, for the period of the year, never better. The effect of the war is to increase rather than diminish the traffic of such as connect the interior with the seaboard. The vastly increased traffic of the Erie and New York Central is proof in point. The earnings of these are 20 per cent. greater than they were the same time a year ago. Securities are not apt to be thrown on the market when there is a good prospect of a steady improvement both in their value, and in the traffic of their roads. Some may come home, but there is an almost equal probability that the present low prices will attract buyers, instead of inducing sales. At any rate, the cause referred to is not likely to be an important element of disturbance.

We cannot refer the recent rise in exchange to any cause that will probably continue, or cause much, if any movement of specie. The transactions are not large. The inquiries are made rather in anticipation of wants, than to meet any existing ones. Such is the prevailing conviction. But should the shipments of specie commence, and go to any threatening extent, we have abundant means for checking it. We understand that the last government loan is held in reserve for this purpose, and that arrangements are already in progress for drawing against either its sale or hypothication. We do not suppose that any such step will be resorted to, as we do not believe that the emergency will arise. Before it should be resorted to, we can very well part with a large amount of gold. But should it be thought best to prevent its shipment altogether, we can easily do so.

We have another means for reducing importations—raising the rates of duties. But we hope these will not be increased. Any change, if made, should be in another direction. We can afford to be much more liberal, and still be on the safe side. With cheap money at home, and cost of transportation from abroad, our domestic establishments can keep out of our market all foreign merchandise that we cannot readily produce. We have little to fear on account of a balance of trade against us, in any point of view; and least of all, when we have overflowing harvests, with a dearth abroad, and duties on many of the articles that we have been accustomed largely to import, almost prohibitory.

☞ T. W. Watson & Co., car builders, Springfield, have executed a large amount of work for the Government, the past summer, and since July last have employed some 350 men. They have built in this time, 290 caissons and limbers for the United States, besides one battery for the State of Illinois, consisting of 6 gun carriages and limbers, and 6 caissons and limbers. In the meantime, they have built 24 street cars for the Brooklyn and Coney Island Railroad Co., and are now building 6 street cars for the Lynn and Boston Railroad, and a number of cattle cars for the New York and Harlem Railroad.

Buffalo and Lake Huron Railroad.

We give below the report of the English Directors of this company, presented at the half-yearly meeting, held in London on the 5th inst. It is dated October 9, 1861, and signed on behalf of the Board of Directors in England by Harman Grisewood, Chairman.

DIRECTORS' REPORT.

Owing to the voluminous character of the reports transmitted from the Canadian executive both monthly and half-yearly, with great regularity, your directors have decided, in the present instances, to give the proprietors the information therein contained in a condensed form, and have endeavored to furnish a clear and faithful representation of the present condition and working of the railway.

The amount of share capital sanctioned by the act of incorporation is 1,640,000*l.* sterling, and of this amount the total issued under authority of the votes of the proprietors is 1,430,000*l.*:—

At 31st Jan., 1861.	Authorized.	Collected.
1st and 2d issues of shares of 20*l.* 10s. each	£615,000	£615,000
Preference convertible shares of 10*l.* each	150,000	133,960
Temporary chattel mort. loan.	50,000	37,600
3d issue, April, 1859, shares of 20*l.* 10s. each (issued at 5*l.* 2s. 6d.)	615,000	153,480
	£1,430,000	£940,040
Calls in arrear (3d issue, April, 1859)		270
Preference shares in hands of the Co.		16,040
Unsubscribed on chattel mortgage loan.		12,400
Difference between nominal and actual value of 1859 issue		461,250
		£1,430,000

Capital Account—Works.—The chief expenditure under this head has been in the construction of the road for connecting the line with the waters of Lake Huron, and for the necessary adjuncts of an elevator, platforms, and freight-sheds and sidings at Goderich, together with wharfage and other improvements at the harbor. Of these works the greater part should have been ready by May, but were retarded in their execution by various causes, so that the line to the harbor was not open for traffic until 17th June, and then in an incomplete state; and on portions of the new road there is still some work to be done under the contract which has been postponed to next spring.

A considerable amount of dredging inside and at the entrance of the harbor had to be undertaken before vessels of heavy burden could enter and be berthed, the greater portion of which has been done and active progress is being made with the remainder. Your directors are strongly urged to extend the piers at the harbor mouth as a further protection against accident to vessels entering, and against the channel being narrowed, or a bar re-formed. The cost of this work may be roughly estimated at $10,000 for an extension of two hundred feet in length, which is represented as sufficient for the purpose, although a greater length is recommended. The board have to inform you that a committee of the Provincial Legislature have reported strongly in favor of Goderich as a harbor of refuge. The Government, however, have not yet given effect to this report, beyond causing a survey of the coast to be made by their engineer. The directors have lost no opportunity of pressing the question on the attention of the Government, and have solicited pecuniary aid towards perfecting the harbor, but hitherto all their applications have been unsuccessful. It will be seen that the general manager in his report enlarges on this subject.

On the main line there has been but little outlay beyond building stone culverts, and a junction station at Stratford; part of the cost of the latter will by agreement be borne by the Grand Trunk. A wharf at Fort Erie destroyed by fire has also

been reconstructed; the sum of $2,000, at which it was insured, has been duly paid to the company by the insurance office.

There appears in capital account an item of $19,326, under the head of "cars, trucks, &c.," the whole of which has not, in fact, been expended, but $19,184 represents material purchased and labor bestowed towards the construction of 50 box cars which the company has contracted to build at their shops for the Brantford Car Company, and which will therefore be paid for by the latter company on their delivery.

Revenue.—The following table shows a comparison of the gross receipts and expenses for four half-years, rendered in sterling money:—

	1860.		1861.	
	Jan. 31.	July 31.	Jan. 31.	July 31.
Revenue	£35,835	28,286	36,596	36,216
Expenses	29,755	26,989	27,296	30,571
	£6,080	1,296	9,300	5,644
Av. weekly traffic	1,378	1,087	1,407	1,392
Av. per mile per week	8	6	8	8
Clear av. weekly profit	233	49	357	217
Per-centage	83	95	75	84

The increase of traffic over the corresponding half-year herein shown arises mainly from local freight, chiefly on the western division, and from connection with the lake trade at Goderich. In foreign passengers and freight there has been a falling off, which has, however, been compensated by an increase in receipts from live stock. Local passenger travel shows a moderate improvement.

The above returns afford an indication of the improved condition, resulting from the bountiful harvest of 1860, of the trade and commerce of Canada, greatly checked and restricted as these must have been by the embarrassments existing amongst its nearest neighbors and best customers in the Northern States. On the abrogation of the prejudicial agreement that formerly existed between the Grand Trunk and Great Western, your directors hoped that arrangements would be made for bringing over your road a large amount of through traffic. To this end an agreement was entered into with the Grand Trunk which unhappily has not been productive of the anticipated results; this disappointment is attributable partly to the want of preparation on the part of that company to secure the full benefit contemplated, and partly to the stagnation in that class of business consequent on the troubles in the United States. Your road as a link in a through rail route is consequently as yet untried.

The arrangement entered into for four propellers to run between Chicago and Goderich, alluded to in the last half-year's report, came into operation before the Goderich Harbor works were available; owing to this fact, and to the low lake rates for freight current during the early part of the season of navigation, the amount guaranteed to the owners of the boats by this company has not been covered; but as freight rates have lately materially advanced, any loss hitherto incurred may, and it is hoped will, be recovered.

The board consider it but reasonable to defer any statement of the results of an experiment justified alike by the policy and the requirements of the railway, until after the close of navigation. Enough has been done so far to demonstrate the value of the new route; and the first year's experience, although the business has been worked under many disadvantages, will not prove unsatisfactory.

The following table shows in detail the revenue and expenses for four half-years:—

	1860.		1861.	
Revenue.	Jan. 31.	July 31.	Jan. 31.	July 31.
Passengers	$53,983	$45,321	$54,810	$50,162
Faeight	116,642	86,448	116,550	118,830
Mails	2,415	2,415	2,415	2,315
Exp. & parcels	1,097	2,189	2,827	1,991
Sundries	1,264	1,285	1,500	1,854
	$174,401	137,660	178,103	176,253
Expenses.				
Maintenance	$35,247	$35,946	$31,103	$36,329
Locomotive exp.	28,616	25,223	30.019	35,729
Transpor.. exp..	33,833	21,226	24,569	28,243
General charges.	16,488	15,384	15,122	16,653
Steamb. expen's	11,329	7,545	6,655	8,782
Agencies	6,750	3,057	2,833	3,211
Transport.freig't and passen'rs, Buffalo	12,207	6,583	8,025	7,525
Sundries—including London office expenses, direc., &c.	10,925	16,581	14,512	12,354
	$144,898	131,349	132,841	148,781

The average cost per mile per annum of maintenance of way and buildings compares thus:—

1860.		1861.	
Jan. 31.	July 31.	Jan. 31.	July 31.
£90	£93	£32	£92

The serious question of renewals, and of the state of the way and works on other Canadian railways, having been recently mooted, the board were desirous of obtaining an independent and competent opinion as to the condition of your railway, and Mr. Peter Elmslie, C. E., of Buffalo, was selected to make a complete survey of the road and works.

The directors consider his report to be of a satisfactory character, and generally in harmony with the views of the general manager and of the engineer, both of whom went carefully over the whole line. Provision will, however, have to be made for the prompt renewal of about five miles of the road between Paris and Brantford.

The locomotive and car repair expenses compare with former half-years as follows:

	1860.		1861.	
	Jan. 31.	July 31.	Jan. 41.	July 31.
Mileage	205,774	157,012	175.510	224,565
Expenses	$35,111	$33.509	$38,114	$46,580
Cost per mile run 8d.	10½d.	10½d.	10d.	

The number and condition of the locomotives are in a most efficient state of repair, the result of the heavy expenditure during this half-year. Two engines which had become unfit for traffic service have been appropriated to other purposes. The Welland has been furnished with a supply of locomotive power from your stock during the half-year.

The condition of the stock of cars generally has been improved considerably, but some of the first-class cars, as well as some flat and gravel cars, still require extensive repairs to put them into thorough order.

There is a discrepancy in the number of cars now on the road, as compared with former reports, to the extent of two box and four flat cars, and no entirely satisfactory explanation has been, so far, received; measures have been adopted to prevent the recurrence of such a loss, which there is ground for believing took place several years ago. The fixed plant in the workshops and the tools are reported to be in excellent condition. Transportation expenses compare as under:

	1860.		1861.	
	Jan. 31.	July 31.	Jan. 31.	July 31.
Conductors, &c.	$3,868	$3,523	$3,825	$5,026
Police	1,844	1,872	2,105	2,207
Porters	4,436	4,872	4,437	5,325
Stores	3,230	1,116	1,341	1,852
Car expenses	6,695	8,286	9,540	10,642
Exchange of st'k.	1,279	661	371	628
Telegraph exp's.	974	690	1,774	1,131
Freight expenses.	1,031	201	1,174	1,429
	$23,333	$21,226	$24,569	$28,243

The efforts made to obtain through business, the increased traffic, and the consequently greater mileage run, have, as was to be expected, necessitated enhanced expenses; but these are not greater per mile run when compared with the corresponding half-year. The directors are happy to add that, although the train service has been so much greater, it has been conducted with regularity, and with freedom from accident.

The stock of stores shows an increased value of $6,000, which is accounted for principally by the purchase of car material. The wood supply has been placed under new superintendence. Although the number of cords on hand, when stock was taken for delivery to the superintendent, exceeded the number stated in the last report by 1,952½, yet the quality was found to be very inferior, and the estimated value proved unequal to the sum then credited by $611, which has been written off against revenue as loss, being actually an insufficient appreciation of the cost of the fuel in previous half-years. On the same principle the item of $1,408 for repairing wood cars has been similarly charged. There is reason to expect that the cost of fuel will not exceed, for some years, a maximum price of $3 per cord.

Postal Subsidy.—Nothing has been decided in reference to this grievance of all the Canadian companies, who, while they concur in their views in regard to it, have hitherto failed in obtaining a remedy. The directors will not fail to press the importance of this subject in every way in their power.

Executive.—The board record with regret the retirement of Mr. C. S. Hill from the direction in England, and that the state of health of Mr. Patchin has necessitated his withdrawal from the Canadian board. Steps have been taken to fill up these vacancies. The general manager has spared no exertion under most discouraging circumstances; and the board have only to renew their high sense of his energetic and intelligent conduct of the affairs of the company. The staff, both here and abroad, have fulfilled their ardous duties with great zeal and efficiency.

In conclusion the directors offer a few remarks on the present position of the company.

It will be gathered that the means at the disposal of the board are almost exhausted, and that to enable them successfully to carry out the objects for which all the expenditure has been incurred, they have no other alternative than to call in the aid of the proprietors. The board are not unmindful of the support they have received from many shareholders, nor are they insensible of the confidence that has been placed in them during the past three years, during which time the prosperity of the company has been retarded by a series of misfortunes, coupled with no little injustice and opposition in the province. These will be fresh in the recollection of the shareholders, who are, however, reminded that the company has throughout maintained its credit and independence, and has made material progress as regards the completion of all works contemplated, as well as in the attainment of those objects for which they were undertaken. The directors desire to point out the small amount of indebtedness of the company—the moderate sum per mile per week required to produce a satisfactory result—the steady development of the resources of Canada, and particularly of the district through which this railway passes, as evinced by the gradual increase of local traffic—the large amount of traffic to be drawn from the lakes—as some of the reasons why the board deem it to be desirable that the proprietors should not withhold the means of perfecting that which has advanced so far. The amount required is not large, and there are no other works of magnitude requiring any very extensive outlay.

Whilst holding these views, however, the board have determined, in the present circumstances of the company, that it is desirable a committee of shareholders should confer with them on the best means of supplying the required relief; and for this purpose they will be prepared to name five gentlemen, whom they will ask the proprietors to appoint, while they earnestly invite the cordial co-operation of all in giving effect to such measures as may hereafter be proposed. Much—almost too much—has devolved upon the directors in the management of this company, but they are not willing, at this stage of affairs, to see their exertions nullified for want of some further trouble,

Provided they meet with the support which the occasion demands.

President of the Canadian Board—GEORGE BROWN, Goderich, C. W.

General Manager—ROBERT S. CARTER, Brantford, C. W.

Secretaries—WM. MCLEAN, Brantford, C. W.; THOMAS SHORT, 80 Lombard St., London, Eng.

Hartford, Providence and Fishkill R. R.

This company is a consolidation of two companies, viz: the Providence and Plainfield, chartered in Rhode Island in June, 1846; and the New York and Hartford, chartered in Connecticut in 1845. Both charters provided for a union of the companies, which was consummated in 1847. The object of these companies was to construct a railroad from Providence, through Rhode Island, Connecticut and New York, to the Hudson River at Fishkill, opposite Newburg, and there connect by ferry with the New York and Erie railroad. The work of construction was commenced in 1847, and the road completed as follows: from Hartford, east to Willimantic and west to Plainville, in 1849; from Plainville west to Bristol, in 1850; from Willimantic east to Providence, in 1854; and from Bristol west to Waterbury, in 1855. The whole length of the road is 122.36 miles—of which 26.32 miles are in Rhode Island, and 96.04 in Connecticut. The length of sidings, turn-outs, etc., is about 11 miles.

The amount of capital stock authorized was $4,500,000, of which $2,037,940 have been paid in, viz: common stock, $1,537,940; preferred stock, (of which $101,200 are claimed to be hypothecated) $500,000.

The preferred stock was created in 1854, and calls for dividends at the rate of 10 per cent. per annum, and has preference over all other kinds of stock. Three semi-annual dividends were made on account of the same—since which nothing has been paid.

The funded debt of the company consists of $2,055,500 first mortgage 7 per cent. coupon bonds (of which $18,000 are claimed to be hypothecated). The mortgage provided for an issue equal to one-half the cost of the road. Of the whole amount $481,000 are a lien on that portion of the road lying in Rhode Island; and $1,574,500 on that portion of the road lying in Connecticut. The bonds are payable at various dates from 1860 to 1876; interest semi-annually Jan. 1 and July 1 at at the company's office in Hartford. The cities of Hartford and Providence each hold $500,000 of the company's bonds, taken in exchange, and as security for their own bonds for like amounts, delivered to and sold by the company. The bonds held by the cities fall due in 1876. The City bonds bear six per cent. interest. The difference in the interest between these and the company's bonds, (one per cent.) is paid to a Sinking Fund for the retirement of the latter. The amount held by the Providence Sinking Fund at this date is $41,000, and by the Hartford Sinking Fund $51,911 17. Failing to pay the conpons due January 1, 1858, the directors assigned the whole property of the company to trustees, who took possession on the 1st of February following, and have since that time had the management of the road. The amount of bonded interest overdue, is $123,934, being the two semi-annual payments on bonds sold of Jan. 1 and July 1, 1858, and which is yet to be paid by the trustees, out of the future earnings of the road over the charge for current interest on bonds sold. The interest on the bonds falling due in 1859, 1860 and 1861, has been regularly paid. The percentage due the Providence Sinking Fund in 1858, amounting to $5,000, is yet unpaid.

The following is the income account from February 1, 1858, to September 30th:

The equipment of the road consists of 16 locomotives; 20 passenger, 9 baggage and 207 freight cars, and over 40 cars for gravel, etc.

The office of the company is at Hartford, Conn The officers and directors chosen October 23, 1861, are:

President—A. S. BECKWITH.

Directors—A. S. Beckwith, S. Hutchins, H. Lippitt, Byron Sprague, G. B. Holmes, S. Harris, C. Day, Alfred Smith, A. Day, V. Cornish, J. P. Elton.

Secretary and Treasurer—H. T. SPERRY.

Engineer and Superintendent—SAMUEL NOTT.

Trustees under Connecticut mortgage—D. F. Robinson, G. M. Bartholomew, and Calvin Day.

Trustees under Rhode Island mortgage—S. Hutchins, S. T. Olney, A. C. Moran, and the Treasurer of the city of Providence.

Baltimore and Ohio Railroad.

At the annual meeting of the directors of this company held in Baltimore on the 19th inst., John W. Garrett, Esq., was unanimously re-elected President for the ensuing year. Upon being informed of the result, Mr. Garrett appeared and addressed the meeting as follows:

Gentlemen—Your committee has informed me that the board has again honored me with a re-election to the presidency of this company by a unanimous vote.

Under the grave responsibilities and difficult and unprecedented circumstances by which the management has recently been environed, this renewed expression of your confidence and appreciation of the faithfulness and labors of your executive, and of his devotion to the protection and promotion of all the great interests connected with the company, demands my cordial acknowledgments.

The prolonged interruption of the business of the company, whilst it has proved so seriously disastrous to Baltimore and the regions traversed by its roads, has proven with equal force that the Baltimore and Ohio Railroad is a vital necessity for this community and the large populations upon its route who are so dependent upon its facilities.

The vast importance of this great highway has been made still more manifest to the whole country, and is now universally felt and understood.

We may, therefore, expect with the arrangements being organized, that at an early period the Baltimore and Ohio road will be again in full and successful operation. Under your auspices, and with that effective co-operation, upon which I know reliance can be placed, I shall confidently anticipate this most important and desirable result.

On the conclusion of Mr. Garrett's address, Joshua I. Atkinson, Esq., was re-elected treasurer of the company without opposition.

Cedar Rapids and Missouri River Railroad.

The grading on this road is completed to Marshal town, and the cars are running, and stations established for twenty-five miles west of this city. —*Cedar Valley Times.*

RAILROAD SHARE LIST, including Mileage, Rolling Stock, etc., etc.

An *asterick* (*) occurring in the column headed "Rolling-Stock," signifies that the cost is included in that of "Railroad and Appurtenances." A *dash* (—) signifies "nil." Running *dots* (....) signify "not ascertained." Land-Grant Railroads are in *"italics."*

American Railroad Journal.

Saturday, November 30, 1861.

Share and Money Market.

The share market the past week has been a very excited one, with a heavy decline, from which it has only partially recovered. The week commenced with an uneasy feeling on account of the Slidell and Mason affair. The excitement created by this had nearly subsided when the question of exchange suddenly assumed a very threatening aspect, exciting great apprehension lest the rise should be followed by a shipment of specie. The alarm is probably groundless, as the balance of trade appears still to be largely in favor of this country. In reference to this subject we have given an extract from the circular of Messrs. Samuel Hallett & Co., in which this whole matter is elaborately discussed. At the close of the week a considerable reaction had taken place, the market leaving off with a very buoyant feeling. Money is in greater abundance, the negotiation by the Banks of the $50,000,000 20 year loan, having had no effect to put up rates. The traffic of the railways is very large, the weather continuing very fine for their operations, as well as for Lake and canal navigation. This is an important element in our foreign trade, as it enables us to accumulate vast stocks of grain at the seaports before winter sets in.

The Illinois Central Railroad Company gives notice to the holders of its stocks, registered on its books on the 15th of January next, that they will be entitled to canceled bonds scrip for five dollars upon each share of stock held by them, deliverable on the 1st of February next; and parties holding certificates are hereby notified to have the same registered in their own names on or before the said 15th day of January. Also that two additional coupons, payable July 1, 1862, and January 1, 1863, on the full paid stock of this company will be deliverable on presentation of certificates at this office, on or after the 1st day of December.

The annual election for directors of the New York Central Railroad Company will be held at the office of the company in Albany on the 11th of December next.

Extensive preparations are being made by the Illinois Central Co. to store corn near Chicago, in cribs, for which purpose a whole section of land has been appropriated.

The Vermont and Canada Railroad Co. have declared a dividend of 4 per cent., payable December 2.

A decision has been rendered in the Supreme Court of this city, in the suit of Lamed, assignee, etc., agt. Little, involving the legality of "calls," or privileges to call, for given amounts of stock. The suit was brought upon a call for 250 shares of Chicago and Rock Island, and was referred by the Court to a well known legal gentleman whose report is in favor of the plaintiff, the defense interposed by the defendant being that the transaction was void, as coming within the prohibition of betting and gaming (2 Revised Statutes, page 980).

Nesquehoning Valley Railroad.

We learn that the Nesquehoning Valley Railroad Company have just placed under contract the heavy sections of the grading, on their main road, and also on the branch road, leading toward the Mahonoy Coal Basin. It is the intention, we understand, to prosecute the work vigorously, so that by commencing the light sections early in the Spring, the whole line can be finished simultaneously. The early completion of this road is very important to the coal interests in the Mahanoy Basin, as affording the shortest and best route to market. The Girard coal lands, owned by the City of Philadelphia, so long unproductive, will on the completion of this work, be sought after by the miner, and no doubt will yield a handsome revenue to the city.

New Mode of Firing Cannon.

Applying Fuse to Projectiles.—This invention, patented by R. P. Parrott, of Cold Spring, New York, is more especially intended for the explosive projectiles of elongated form usually thrown from rifled cannon, and which move with the point forward; and it has for its principal object to make the same fuse serve either as a time fuse or a percussion fuse, as may be desired, the fuse employed being the paper fuse commonly used in shells, or of any other suitable kind, and the use of fulminates being dispensed with. The said invention consists in providing in the projectile, on each side of the hole, commonly known as the fuse hole, a hole for the reception of the fuse intersecting or meeting the first-named hole in a transverse direction. In connection with this transverse hole for the reception of the fuse, there is employed in the first-mentioned hole to effect the explosion of the projectile by percussion, a movable plug, plunger or other piece of metal suitably applied to break the fuse when the projectile strikes, so that the fire from the fuse, which is ignited by the fire of the gun, may communicate with the charge of the projectile; but this plug or piece may be omitted when the fuse is to be used as a time fuse.

Dubuque and Sioux City Railroad.

At a meeting of the Board of Directors of the Dubuque and Sioux City Railroad Company," held in New York on the 28th of October, 1861, all the Directors being present either in person or by proxy, the resignation of Mr. Herman Gelpcke as President was tendered and accepted, and Edward Stimson, of Dubuque, was unanimously elected to fill the vacancy.

Cotton in Illinois.

A letter from the West states that several farmers in Southern Illinois have engaged in the business of cotton raising this season:

"One farmer in Christian County, on the line of the Illinois Central Railroad, planted ten acres this year, and although it was planted so late that but one picking could be had, yet the average product was 800 pounds per acre. This at present prices is doubly profitable to the raising of wheat or corn. This experiment has so encouraged the produce experimenter that he proposes to enter largely into cotton raising another season—even to the extent of 2,000 acres. Other parties in that and the neighboring counties are preparing to make this their principal business another year. Buildings and machinery are to be erected for ginning and baling. The Tennessee upland variety is raised. One resident, of 27 years' standing, says he has raised cotton every season without a single failure, which is more than can be said of wheat or corn."

Railroad Freights.

Our railroads are doing a great business in the freight line, taxing the rolling capacities of the roads to the utmost extent. On Monday 120 cars, fully loaded with freight, came on the Grand Trunk road. The Kennebec and Portland Road is doing better than it has ever before done. The opening of the Androscoggin extension has thrown a large freight traffic on the K. & P. road. The York and Cumberland keeps all its cars fully employed. The Androscoggin and Kennebec is also doing a large business.—*Portland Argus.*

New York Central Railroad.

"On Saturday last, the New York Central Railroad Company sent eastward, from this city, *three hundred and seventy six* cars, fully laden with freight. They were chiefly from Buffalo and Suspension Bridge, and were laden with flour and other rolling freight from the West, cattle, &c. Had these cars been wholly laden with flour, they would have taken 37,600 bbls. This was the largest day's work in freighting ever performed on the Central. Great as the number of cars was, the whole freight could have been put in twenty large-class canal boats, which eighty horses and one hundred men would have worked through from Buffalo to Albany in a week. The cars will make two round trips in that time. So it may be said that the freighting capacity of the Central Railroad is equal to eighty first-class canal boats. It is possible that we have estimated the number of trips by the cars too low, but we have been told that the same cars do not ordinarily make above two round trips per week."—*Rochester Union.*

Philadelphia, Wilmington and Baltimore Railroad.

A correspondent inquires about Wilmington, and whether it is advancing as an investment or as a temporary speculation? We reply that when the rebellion broke out, the Wilmington was doing such a business, under the management of Mr. Felton, as would have made it a regular 8 per cent. stock, after certain improvements and expenditures had been met. Since that time its earnings have increased very much, from the Government and other business which has been heaped upon it. In October alone the increase was $60,000 over the earnings of October, 1860. November also bids fair to show an equally handsome gain. Whether the war be long or short, Washington cannot but be a great military as well as political headquarters henceforward, and the Wilmington is therefore sure of a large business, far surpassing that which it enjoyed before 1861, but which really netted 8 per cent. to the corporation. But the bare possibility that the rebels might occupy Washington and menace Baltimore has greatly depressed the Wilmington in the market, and it is only as these fears have been vanishing, that the stock has rapidly advanced. We like to talk plainly, and see no reason why we should not do so. If our views are incorrect they will fall to the ground. We never stop for insinuations. We consider Wilmington worth par ($50 per share) for the reasons that it is in good order, is well managed, has a moderate debt provided for by a sinking fund, and is earning 10 to 12 per cent. per annum. It may safely be assumed to pay $4 per share (8 per cent.) hereafter, and in this view we cannot perceive why it should not sell for as much as the Northern that pays $4 or the Eastern that pays $4. Our plain inference is, that although Wilmington has advanced rapidly, it is yet very cheap, in view of its condition, management, profits and security from damage by treason.—*Boston Post.*

Rates of Foreign Exchange.

The rates of Foreign Exchange, as quoted by N. BRANDT, Broker, No. 39 Exchange-place, for the steamer of November 27, were as follows:

London—60 days' sight.....109¼ per cent
London—3 days' sight.....110¼ "
Paris—60 days' sight, per dollar..5f. 18¾c.
Paris—3 days' sight, per dollar...5f. 13¾c.
Amsterdam—60 days' sight, per guilder.....41⅛c.
Hamburg—60 days' sight, per marc banco.....36¾c.
Frankfort—60 days' sight, per florin.....41½c.
Bremen—60 days' sight, per rix dollar.....79½c.

New Books Received.

A MANUAL OF ELEMENTARY GEOMETRICAL DRAWING. Involving three dimensions.—By S. Edward Warren, C. E. Published by John Wiley, 56 Walker st., N. Y.

This work is designed for use in high schools, academies, engineering schools, etc., and for the self-instruction of inventors, artizans, etc. In five divisions, viz: Elementary Projection; Details of construction in masonry, wood and metal; Rudimentary exercises in shades and shadows; Isometrical drawing; Elementary structural drawing.

Philadelphia, Germantown and Norristown Railroad.

This company was chartered February 17, 1831, with authority to construct a railroad from Philadelphia to Norristown, 17.06 miles, and a branch to Germantown, 3.14 miles. Construction was commenced in the same year, and the road completed and opened to Germantown, June 6, 1832; to Manayunk, October 18, 1834; and to Norristown, August 15, 1835. The Chester Valley Railroad, extending from Bridgeport to Dowingtown, 21½ miles, was operated under lease by this company from the date of its opening, September 12, 1853, to January 1, 1859—the latter charging 70 cents for each mile run by cars. The receipts from, and expenditures on account of operating this road are given in the annexed statement. The Chesnut Hill Railroad, extending from Germantown to Chesnut Hill, 4.16 miles, was completed in October, 1854, and has since been operated under a lease by this company—the former receiving as rent therefor, one half of the gross earnings from the traffic between Philadelphia and Chesnut Hill, until the earnings reach $17,000 a year, and one-fourth of all earnings above that amount. The receipts from and expenditures on account of operating this road are also given below.

The capital stock authorized was $1,250,000, of which $1,243,500 has been paid.

The funded debt of the company amounts to $374,800, classified as follows: Consolidated Loan 6 per cent. bonds, $274,800—dated 1848, and payable in 1865, with interest semi-annually Jan. 1, and July 1, in Philadelphia. Loan of 1852, $100,000, payable in 1863, with interest semi-annually June 1, and Dec. 1, in Philadelphia.

The following is a statement of receipts and expenditures for the years ending September 30:

The cost and earnings of the road cannot be given prior to 1844. The gross earnings for the past 18 years have been $3,255,952, the aggregate expenses, $1,939,260, and the net earnings, $1,317,526. The dividends declared since 1851 have amounted to 84 per cent., and the disbursements on that account to $915,490. The average cost of road and equipment has been $1,177,769.

President—EDWARD C. DALE.
Secretary and Treasurer—W. S. WILSON.
Superintendent—H. K. SMITH.

Railroads in California.

The following statistics of the earnings of the Sacramento Valley R. R. for the last three months of this year—July, August and September—would indicate that railroad stock must be looking up. With such a promise of increased business, railroads must certainly pay in California. The following are the earnings of July, August and September $70,726 78
Expenses for the same time 28,488 32

Net above expenses $44,238 46
" " same time last year.. 29,217 44

Increase this year $85,021 02

This shows a net increase of over fifty per cent. on the same time last year. The Central Railroad, connecting with this road at Folsom, will be finished this month to Lincoln (twenty miles), and from thence to Marysville next season, and the railroad from Folsom to Auburn is now being graded, and will be finished by the 1st of April next. Both of these will be paying roads, and will add largely to the receipts of the Sacramento Valley Road. There is also a railroad in contemplation from Folsom to Placerville; surveys have been made, and it may be built next season. Railroads built for cash on any thoroughfare in this State, will pay handsome dividends to the stockholders; and now is the time to build them, when iron and labor are cheap.—*Atla California, October 6.*

Iron Bridge for the Illinois Central R. R.

Messrs. Kellogg & Co.'s Iron works in Detroit are constructing an iron suspension bridge 340 feet in length, for the Illinois Central R. R. track, across Cache River, five miles from Cairo. This bridge has three spans and four towers, upon which the whole weight of the bridge and whatever is on it, is made to rest. There are two of these bridges, the one called a "Through Bridge," and the other a "Deck Bridge." The train goes through the former, while it only goes over the latter, which is only used where the grade of the road is sufficiently high to admit of being built above high water mark. Kellogg & Co. are also building a deck bridge for the Galena and Chicago Union Railroad.

Railroad Earnings--Monthly.

The Buffalo and State Line Road earned in October about $112,000, at an expense of no more than $42,000, leaving about 7½ per cent. net on the capital stock of $2,000,000 for a single month. The net profit on the traffic of October, 1860, was $59,000, as against $70,000 the present season.

The following statement shows the business of the Philadelphia and Reading Railroad Company for the month of October, 1861, compared with that of 1860:

	1861.	1860.
Rec'd from coal	$197,343 50	$267,457 06
" " merch'dise	40,832 29	66,148 21
" " travel, etc.	38,033 12	35,351 17
Total	$276,208 91	$368,956 44
Transportation, roadway, dumpage, renewal fund, and all charges	123,419 11	144,812 38
Net profit for the m'th	$152,789 80	$224,144 06
Profit for the previous 10 months	1,134,521 51	1,269,781 10
Tot. profit for 11 mos.	$1,287,311 31	$1,493,925 16

The loss of revenue the past month from coal as compared with corresponding time last year is $70,113, and from merchandise, $25,316; the travel showing an increase of $3,000. The expenses were lessened $21,392. Net loss for the month, $71,333, and for the 11 month of the fiscal year, $206,614.

Railroad Earnings--Weekly.

The earnings of the Cleveland and Toledo Railroad for the 3d week in November, 1861, were $18,980
Do., 1860 20,450

Increase $1,470

The traffic of the Great Western Railway of Canada for the week ending Nov. 22, 1861, was as follows:

Passenger	$17,177 48
Freight and live stock	26,859 59
Mails and sundries	2,068 99
Total	$46,106 06
Corresponding week of last year	43,515 74
Decrease	$2,590 32

The earnings of the Galena and Chicago Railroad the 3d week in Nov., 1861, were $34,919
Do., 1860 36,841

Decrease $1,922

The earnings of the Michigan Central Railroad for the 3d week of Nov., 1861, were $52,593 85
Do., 1860 ..... 48,529 49

Increase $4,064 36

The receipts of the Grand Trunk Railway of Canada for the week ending Nov. 16, were $91,938 75
Corresponding week, 1860 ..... 80,195 72

Increase in 1861 ..... $11,743 03
Total traffic from July 1st, 1861 ..... $1,416,756 11
Corresponding period previous year. 1,372,198 72

Increase $44,557 39

Pacific Mail Steamship Company.

The quarterly statement of this company shows the following result:

STATEMENT OF THE PACIFIC MAIL STEAMSHIP COMPANY, Nov. 1, 1861.

Assets.

Cash on hand, loans and investm'ts.	$1,390,038 58
31,972 tons coal on hand and in transitu, on which there has been paid	382,025 55
12 steamers, including new steamer Constitution	1,711,337 98
Storeships, iron boats and scows	67,117 00
Real estate	251,534 62
Machinery at Benecia	81,000 00
Outfits and supplies in the hands of agents, and in transitu	147,932 14
Stock in North Atl. Steamship Co.	221,666 65
Due from agents and pursers	20,755 68
Total	$4,273,408 20

Liabilities.

Capital stock	$4,000,000 00
Sundry unsettled accounts	42,976 97
Profit and loss, surplus Aug., 1861	$70,120 81
Profit and loss, net earnings for the three months endings Nov. 1.	397,270 33
Total	$467,391 24
Charge sinking fund depreciation of steamers & real estate (Ben'a).	236,960 01
Surplus Nov. 1	$230,431 23
Total	$4,273,408 20

From the surplus of Nov. 1, a quarterly dividend of 5 per cent. on the capital stock was declared payable Nov. 13.

AMERICAN RAILROAD BOND LIST.

*) signifies that the road is in the hands of receivers. (†) that the company is in default in its interest. "S. F.," Sinking Fund. "var.," that the bonds fall due at different periods

(From the C., E. and A. Journal.)

Suspension Girder Bridges for Railway Traffic.

(Continued from p. 823.)

For a girder of a given uniform section, the wave of simple deflection may be determined by the ordinary rules. As the resistance of the girder to vertical displacements will be far more powerful than that of the chain, the displacements being very small compared with the versed sine of the curve of the chains, no serious amount of error is involved in assuming that the form of this wave depends absolutely on the girder, without reference to the chains.

We can therefore at once give an algebraical expression for z_1, the ordinate of the wave of simple deflection. Thence can be determined the value of $\int \frac{dy}{dx} dz_1 = H$, the horizontal distance by which the span of the chains would be diminished through the wave of simple deflection, were the effect not compensated by the reflex wave.

The reflex wave must be of a form due to the action of an equally diffused upward pressure on the girder, since the curve of the chains (when the displacement is not considerable) may still be considered to be that due to equal loading; and the equal loading of the chain being conveyed through the suspension rods attached to the platform, the reaction on the platform must be equally distributed also. For similar reasons to those already adduced, the form of this reflex wave is deducible from the laws of girders simply. Its magnitude—and, in consequence, the proportion which the chains bear of the entire load—is determined by the equation

$$H + \int \frac{dy}{dx} dz_2 = 0;$$

which gives the conditions on which alone the reflex wave can compensate the wave of deflection.

Having thus determined the simple wave of deflection and its ordinate z_1, and the reflex wave and its ordinate z_2; the superposition of the one wave on the other gives the actual compound wave of deflection with its ordinates $= z_1 + z_2$. The actual strain on the girder at any point will be found by subtracting from the strain accompanying the simple deflection the upward strain due to the reflex wave. In fact, the process of the analysis has regarded as successive two waves which are actually simultaneous; and by thus resolving the compound wave into its component parts, a solution is attained capable of simple and ready application.

If, for instance, it be inquired, what effect will be produced by a weight w placed on the suspended girder at a point distant d feet from the half-span (the ratio $\frac{d}{s}$ being expressed by r), it will be found, on pursuing the method of investigation just indicated, that a distributed pressure will be thrown on the chains

$$= \left(\frac{25}{16} - \frac{15}{2} r^2 + 5r^4\right) \times w;$$

and that the reflex wave due to the reaction of the chains will have its ordinate at the half-span

$$= k \times \frac{5}{6} \frac{s^3}{64} \left(\frac{25}{16} - \frac{15}{2} r^2 + 5r^4\right) \times w,$$

k being a co-efficient depending on the rigidity of the girder, and s being the span. Combining the reflex wave with the simple wave of deflection (determined by the usual rules for girders), in which the same co-efficient k will occur, the compound wave is obtained. A correction for the effect of the stretching of the chains which goes to reduce the reflex wave, remains to be made and the result is a very close approximation to the actual state of the suspended girder under the assumed conditions.

The case in which a single concentrated load produces the greatest wave, and causes the greatest strain to be thrown on the girder, is when it is placed at a distance midway between the half-span and one of the towers. A load of 256 cwt. placed in this position causes a distributed pressure on the chains equal to 285 cwt. This excess of 29 cwt. is due to the reaction of the further end of the girder, which is supposed to be fixed down to the pier by rollers, as it would otherwise be lifted from its seat by the tension of the chains. Let us compare the wave caused by a weight in this position with the deflection which the same weight would produce if placed in the centre of the girder, the support of the chains being withheld: w being the weight, and k the constant already referred to, $-kw \times \frac{s^3}{48}$ is the deflection which would follow were the girder not suspended, and the weight placed in the centre. To facilitate comparison we will therefore express the ordinates of the wave now under examination in terms of $\frac{kws^3}{48}$.

First, the simple wave of deflection will have for its ordinates—

at the loaded quarter-span $-0.5625 \times \frac{kws^3}{48}$

at the half-span ..... $-0.6875 \times \frac{kws^3}{48}$

and, at the opposite quarter-span, $-0.4375 \times \frac{kws^3}{48}$.

The reflex will have for its ordinates—

at the loaded quarter-span, $+0.4959 \times \frac{kws^3}{48}$

at the half-span ..... $+0.6958 \times \frac{kws^3}{48}$

at the opposite quarter-span $+0.4959 \times \frac{kws^3}{48}$.

The addition of these ordinates will give the following as as the ordinates of the resultant wave:—

at the loaded quarter-span (a depression), $-0.0666 \times \frac{kws^3}{48}$

at the half-span (a rise) ..... $+0.0083 \times \frac{kws^3}{48}$

at the oppos. quarter-span (a rise) $+0.0584 \times \frac{kws^3}{48}$.

The greatest deflection is, therefore, $-0.0666 \times \frac{kws^3}{48}$, or 1-15th of the deflection due to the same load placed on the middle of the girder without chains. This result has, however, to be increased by the correction for the stretching of the chains.

The preceding result cannot be directly compared with those given by Mr. Barlow's experiments, because the reflex wave in his model is affected by the inequality in the height of the towers, which is such as to increase this wave by 1-73rd part when the load is placed one-fourth of span from the high tower, or to reduce it by the same amount when the load is placed one-fourth of span from the low tower. We will, therefore, take the mean of two experiments with the first girder, the load being 56 lbs.; in the first case, placed at quarter-span from the high tower, and, in the second case, at quarter-span from the low tower; and compare the mean so obtained with the deductions of theory.

The girder experimented on was one which, without the chains, deflected 1.2 ins. when a load of 42 lbs. was placed on the centre. In this instance, therefore, $\frac{kws^3}{48} = \frac{1.2}{42} \times w = \frac{w}{35}$. For the load of 56 lbs. at the quarter-span we have, therefore, to multiply the co-efficients of $\frac{kws^3}{48}$, as above determined by the fraction $\frac{56}{35}$, or $\frac{8}{5}$, in order to obtain the ordinates, in fractions of an inch. The following is a comparison of the results:—

	Theory. inch.	Experiment. inch.
At loaded quarter-span..	D. —0.107	D. —0.110
At half-span	R. +0.013	D. —0.010
At opposite quarter-span.	R. +0.093	R. +0.055

D.=Depression. R.=Rise.

With a load of 168 lbs. placed at the quarter-span, taking the mean of two experiments as before, we get the following results:—

	Theory. inch.	Experiment. inch.
At loaded quarter-span..	D. —0.320	D. —0.320
At half-span	R. +0.040	D. —0.065
At opposite quarter-span.	R. +0.280	R. +0.170

In glancing at these figures, an exact correspondence is noticeable between theory and experiment in the amount of depression at the loaded quarter-span. We must not, however, allow ourselves to be deceived by an identity of result, which arises from a compensation of opposite disturbing causes. It is evident that the form of wave in the model is different from that of the calculated wave; that the centre is depressed instead of rising; and that, while theory gives 0.60 inch as the sum of extreme depression and extreme rise, experiment reduces this sum to 0.49 in.

One element of this difference is to be sought for in the stretching of the chain in the model, which causes a deflection at the centre of the girder, and elongates and deepens the wave of depression, at the same time that it reduces the wave of elevation. The other element of difference lies in the resistance of the chain itself to a change of position, a resistance very noticeable in a heavily-weighted model with an exaggerated wave, but omitted in our theory; the error involved in the omission being one on the safe side. The operation of this cause in modifying and reducing the total wave (as measured from extreme deflection at one-quarter span to extreme elevation at the opposite quarter-span) may be traced in the successive experiments made by Mr. Barlow, in which the distributed load on the platform was gradually increased to 193 lbs. In this set of experiments, the girder was a plank, 7½ ins. by ¾ in., the deflection of which, without the chain, was 1.48 ins. with 10 lbs. A weight of 56 lbs. was placed at quarter-span from the high tower. The displacements according to theory, after correction for the unequal height of the towers, should be as follows:—

	Inch.
At quarter from high tower	—0.496
At half "	+0.148
At three-quarters "	+0.540

The actual displacements with no distributed load on the platform were—

	Inch.
At quarter from high tower.	—0.48
At half "	—0.02
At three-quarters "	+0.29

But with a distributed load of 193 lbs. placed on the girder, the displacements caused by the 56 lbs. weight became reduced to the following:—

	Inch.
At quarter from high tower	—0.31
At half "	+0.05
At three-quarters "	+0.20

As might have been expected, the more the wave is magnified in the model, by reducing the rigidity of the girder, the more widely the actual displacements differ from those of theory; owing to the resistance of the chain to these exaggerated displacements becoming more appreciable. Thus, for the girder which deflected without the chains 2.375 ins. under a load of 8 lbs., if we take a mean between the results given by 56 lbs. placed at one-fourth from the high tower, and the same weight placed at one fourth from the low tower, we find the calculated and the actual displacements to be respectively as follows:—

	Theory. Inch.	Experiment. Inch.
At loaded quarter-span	—1.108	—0.855
At half-span	+0.138	+0.160
At opposite quarter-span...	+0.971	+0.780

The result of the experiments in this instance is very diverse from those of the preceding experiments, especially in the proportionate largeness of the wave of elevation, which in fact seems anomalous.

On the whole, the comparison of these experiments with the results of calculation considerably confirms the accuracy of the theoretical formula, as applied to the small actual dipplacements of a full-sized bridge. It must, however, be remembered, that it has been assumed that the flexibility of the girder is everywhere uniform, and the same for upward as for downward pressure—conditions not always found in a plank, such as took the place of a girder in Mr. Barlow's model; and assumed further, that the girder is not continued nor weighted from any distance beyond the face of the piers.

According to the calculated co-efficients, a concentrated load at quarter-span from one tower will cause a depression of 0.0666, or 1-15th the deflection which the same load without the chains would cause if placed at the centre of the girder. This depression will be accompanied by a rise at the opposite quarter-span of 0.0584. The depression will be increased, and the rise diminished, by the stretching of the chains. The sum, which will not be affected by the stretching of the chains, is 0.1250, or $\frac{1}{8}$.

(To be continued.)

Duty of Prize Masters.

THE PRIZE CASES: TO WHOM BELONGS THE CUSTODY OF PRISONERS, THE CIVIL OR MILITARY POWERS?

The law of prize cases is comparatively, novel to American people. They, of course, only occur during time of war; and not being brought to our attention during intervals of peace, the principles of law governing such cases, and even the formula of proceedings are forgotten.

The Justice in the District Court of the United States for the Eastern District of Pennsylvania, in answer to a letter addressed to him by the Military Comandant of the Navy Yard at that station, lays down the law relative to the custody and control of prizes and prisoners, during the time they are in port, and the case is undergoing adjudication. He also applies the principles so laid down to the case of the Amelia, a vessel then in port, possession of which had then been given to the Marshall of the District by the Prize Master. The following is the Justice's answer to the letter.

CADWALADER J. In this case I have received a letter from the commandant of the navy yard at this station, on the subject of the persons on board of this vessel, whom he designates as prisoners and passengers. Though epistolary communications to courts of justice are always inconvenient, and in most cases irregular, an occasional exception must be allowed in transacting the peculiar business of Prize Courts. I have therefore directed that this letter be filed. The commandant asks me for some directions as to his disposal of these persons, I can of course give no directions as to the mode, in which officers of the naval service are to follow its rules concerning the custody and treatment of their prisioners, though in the case of a prize, I might entertain a complaint of irregularities of certain kinds in these respects.

In prize cases the duty of the Naval Captors who send a vessel into port for adjudication, requires them to send in a sufficient number of the persons taken in her, including in ordinary cases the master and mate, as witnesses for examination. In some cases, actual or nominal, passengers are the most important examinants. Few really contestable cases occur in which the examinants are too numerous. They are not unfrequently too few; and they have in some cases been persons of too inferior grade to satisfy the requirements of the judicial investigation. A neglect of the fulfilment of this duty, not less than improper treatment of captured persons, may be the subject of judicial consideration, affecting questions of prize money, and of costs and semetimes involving questions more serious.

Officers of the naval service have occasionally fallen into the mistake of supposing that when captured vessels are brought into port, and pass into judicial custody, the care and custody of the prisoners, or persons brought in for examination, becomes judicial. This impression is, in a general sense, erroneous. The custody, unless they are surrendered under some criminal charge, cognizable by the judicial authority of the district continues to be military, and cannot be interferred with by the Prize Court, except for the purpose of securing the examination of the witnesses. So, after their examination has been completed, their custody, if it continues, is still military and not civil, unless they are charged with a criminal offence, and surrendered under it. Whether persons not thus charged should be detained in military custody after they have been examined, is often a question of great public interest, and may be attended with serious difficulty. But this question does not concern the Prize Courts. It is for the consideration of the prize master, or of the superior naval officer of the station.

On a former occasion I made some remarks, of which the substance was written out, and formed the basis of a subsequent communication from the Assistant Attorney of the United States for this district to the Attorney General. What I then said I now repeat, as follows:

"When a captured vessel is brought into port for adjudication, and passes into judicial custody, the prize master or other naval commander retains the custody of the prisoners until, according to the rules of the naval service, they are discharged, or transferred into close custody, as the public interest may require. Sometimes the prisoners are merely persons detained for examination as witnesses. That they are brought in and are detained for this purpose alone, does not prevent them from continuing in *naval* custody. Sometimes these persons cannot be discharged with humanity, because they might starve for want of means of present support in a strange place. In other cases, they are so far dangerous from possible hostile relations, that, though perhaps not liable to detention as close prisoners, their premature liberation would be imprudent. The duty devolves upon the Government, but not upon its judicial department, to provide for their support while in port. If the expenses of their comfortable subsistence are not defrayed by the local disbursing agent of the naval department of the Government, and they are consequently discharged, their discharge cannot be prevented by the Prize Court. This court might, if they were thus discharged before the completion of their examinations, direct an allowance to them of one dollar and a-half per day each, as witness money. But this allowance would only be made for the time, seldom exceeding a single day, of their actual detention for examination after their discharge from naval custody, and would not absolve the naval custodian from responsibility for premature or improper discharge, or for want of proper care of them before and afterwards.

"An incidental subject of less importance, though not unimportant, is that the prize master and and his crew usually incur incidental charges which cannot be repaid by the marshal or other officer of the judicial department until after the condemnation and sale of the captured property. Such expenses ought to be promptly reimbursed as other current local expenses of the naval station to which the prize may be brought. The officer defraying them can, in proper cases for a reimbursement, obtain it after condemnation out of the proceeds. This, if a condemnation ensues, can, on behalf of this officer, be attended to by the Attorney of the United States, who, in proper cases, is always ready to render such incidental services on request. Pilotage, towage and canal charges, are examples of such expenditures as may be thus incurred by persons entrusted with the safe delivery of a prize vessel into the hands of the judicial officers of the Government. Such charges are not, like the wharfage, &c., incurred *after* delivery into judicial custody, payable by the marshal. I have been told that in some judicial districts of the United States, the marshals are in the habit of paying such prior charges. This may be very proper where they may choose to act for the purpose as disbursing agents of the proper executive department of the Government, and are employed for the purpose. But it is not a part of their official duty as marshals, or a subject within any direct cognizance of the Prize Court before condemnation."

The question how far the military duty of protecting a prize in the port of adjudication, continues to rest upon the prize master and his crew, after she is in the marshal's official custody for civil purpsses, arose in a case in which some of the prize crew had deserted in this port. The case was that of a recaptured vessel. The question was whether the deserters had forfeited their shares of salvage decreed. If no such duty of protection continued, their shares were not forfeited by such subsequent misconduct. The case was argued on the question whether the duty did not continue so long as they remained in the port of adjudication, and had been assigned to no other incompatible naval duty. The case remains under consideration. A similar question as to prize money might arise in the case of a captured vessel. The distinction between cases which thus concern the vessel, and the case of prisoners, is, that prisoners do not pass, as the vessel does, into the custody of the Prize Court. However therefore the case to which I have referred, of the deserters, may be decided, the case of prisoners is free from doubt. It would be easy to state cases in which their military custody might be required for the safety of the country. The rule must be uniform in all cases.

The clerk of the court will send a copy of this to the naval commandant. The District Attorney informs me that he has no criminal charge to prefer against any of the prisoners. The prize commissioners has not, as yet, made his report. But he informs me that he has completed his examinations of the witnesses who were brought in the vessel. The libel was filed and allowed yesterday, when the vessel passed into the legal custody of

the marshal. The business of the court, therefore does not seem to require the longer detention of any of the persons in question. Their discharge or detention rests with the officers of the naval service, according to its rules.

In the case of the *Amelia* the prize master reported to the Justice that he had given possession of the ship to the marshal of the district, and since giving it to him, had aided him in the custody and safe keeping of the vessel and cargo; and he had allowed the persons sent with him on board of the ship, viz: the captain, his wife, the cook and his wife and daughter, to go ashore for their greater comfort, there being no conveniences for them on board the vessel; and each and all of them remainly willingly subject to the orders of the judge of this court. To this the court responded as follows:

The prize master is mistaken in supposing that the persons mentioned in the above statement are subject to the order of the court. On the contrary, they are in custody of the naval captors, unless they have been duly discharged. The court cannot interfere to direct their discharge. But if the commissioner of the court and the prize master concur in opinion that there is no reason for their longer detention, the court cannot perceive that their discharge would be censurable. This, however, is a matter for naval, and not for judicial regulation.

The prize master, stating that his duties may require him to leave Philadelphia, the court add, that so soon as the persons in his custody shall have been discharged, or their custody otherwise regulated by the proper naval authority, the court perceive no necessity for his remaining here longer. But so far as naval duties may be concerned, the prize master will, in this respect, judge for himself what should be his course of conduct.

OFFICE OF THE ILLINOIS CENTRAL R. R. Co.,
New York, Oct. 29, 1861.

HOLDERS of the stock of this Company, as registered upon the books of the company at the close of business on the 15th day of January, 1862, will be entitled to Canceled Bonds Scrip for five dollars upon each share of stock held by them deliverable on or after the 1st day of February next; and parties holding certificates are hereby notified to have the same registered in their own names on or before the said 15th day of January. 48

OFFICE OF THE ILLINOIS CENTRAL R. R. Co.,
New York, Oct. 29, 1861.

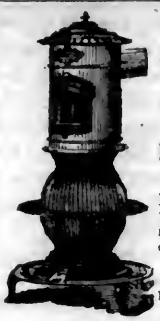
TWO additional coupons payable July 1, 1862, and Jan. 1, 1863, on the full paid stock of this Company, will be deliverable on presentation of certificates at this office, on or after the 1st day of December.

48 THOMAS E. WALKER, Treasurer.

OFFICE OF THE NEW YORK CENTRAL R. R. Co.,
Albany, November 1, 1861.

THE annual election for Directors of this Company, and for three Inspectors of the next election, will be held at the Office of the Company, in the Exchange, in the city of Albany, on the second Wednesday (the eleventh,) of December next. The poll will be opened at eleven o'clock in the forenoon, and will continue open for two hours thereafter. By order of the Board of Directors.

JOHN V. L. PRUYN,
5t45 Secretary *pro tem.*



LOCOMOTIVES FOR SALE.

THE Boston and Maine Railroad Company have for sale three second hand Locomotives of the following specification and description.

They all have outside cylinders and connections. Cylinders 15x20, four driving wheels, 4 ft. 6 in. diameter, diameter of boiler, 43 in. No. of tubes, 127; length of tubes, 10 ft.; diameter of do., 1¾ in.; weight of engines, about 24 tons each; capacity of tank on tender, 1,500 gall.

The above Locomotives are all in good working order, and are offered for sale on account of the Company having purchased several locomotives of greater capacity. Parties in want of a good machine can have now an opportunity to purchase at a reasonable rate. Application may be made at the office in Haymarket Square, Boston.

WILLIAM MERRITT Sup't.
Boston, Nov. 24, 1860. tf

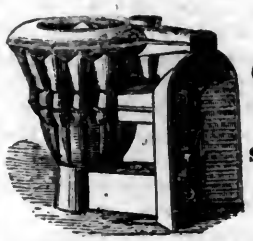
SANFORD'S
MAMMOTH
OR
GLOBE
HEATERS.

The best stoves for RAILROAD DEPOTS and SHOPS, and all places where a great heat is required. They are very durable, and very economical of coal.

Beware of imitations that are inferior in strength and in other respects.

TESTIMONIALS.

HUDSON RIVER RAILROAD OFFICE, N. Y



This Company have now in use, over two hundred of Sanford's Mammoth Heaters, in Station Houses, Work Shops, and Engine Houses; we commenced using them in 1853, and some of the first stoves put up are still good and in use. We consider them the best Heaters now in use.

J. M. HEBARD, Supply Agent.

UNION FERRY COMPANY.

The Mammoth Heaters have been used by this Company in their waiting rooms at the several ferries and found to be very excellent stoves and more durable and valuable than any heretofore used. CYRUS P. SMITH, Managing Director.

Challenge Air-tight
KITCHEN RANGES,

May be placed in a fire-place without masonry, and with or without water-back; or may be set out on feet, as an ordinary stove.

This range, already very popular, has the **LARGEST OVENS** of any in the market; BAKES PERFECTLY, never burning to brown at the bottom; BOILS, ROASTS and and BROILS with unequalled facility and dispatch, and with extraordinary **ECONOMY OF FUEL**, which may be either coal or wood. Flues large and easily cleaned. A child can manage it, so simple is its construction. Castings extra heavy, and design plain and chaste.

Four sizes, adapted to families and hotels.

Beacon Light
SUMMER AND WINTER
PORTABLE RANGE,

Is a very popular range, having six boiler holes, one large oven that bakes perfectly, with an arrangement for roasting, or heating irons at the end. It is very economical of fuel. For a FEW DOLLARS a family may be supplied with a PERFECT COOKING APPARATUS, equal to the highest price stove in the market.

Three sizes, adapted to coal, or wood.

SANFORD, TRUSLOW & CO.,
239 and 241 Water st., N. Y

HEAD QUARTERS, WESTERN DEPARTMENT,
St. Louis, Mo., August 23, 1861.

To Presidents and Superintendents of Railroads, Western Department, United States Army.

THE following is the basis established by the Government for the transportation of troops and supplies for the army:—

Per Passenger per mile (2) two cents for distances moved.

Equipments, munitions and supplies accompanying regiments, first class local rates, which will average about as follows:

30 miles or less		10 cents	per 100 pounds.
50	" "	15 "	"
100	" "	25 "	"
150	" "	40 "	"
200	" "	50 "	"
300	" "	75 "	"
350 to 400 miles not exceeding		90 "	"

For transportation of Horses in small lots, the following are the usual estimated weights of Railroad Companies:

Single animals	3,000 pounds.
2 animals	4,000 "
3 "	5,000 "
4 horses	6,500 "
5 "	8,000 "
6 "	9,500 "
7 "	10,000 "
8 "	11,001 "
9 "	12,000 "

Full car loads, 13 or 14 horses, usually charged 18,000 lbs. All other supplies forwarded by Freight Trains are charged local rates, according to classification of property which will usually average, on provisions and heavy freight, two to three cents per ton of 2,000 lbs. per mile.

Fast freights, immediate transportation, and precedence given to the Government in all cases.

All despatches required by the Government, to be furnished at the actual running cost.

E. H. CASTLE,
Supervisor Railroads, Western Department.

New York, Saturday, December 7, 1861.

Western Maryland Railroad.

This company was chartered in January, 1852, for the purpose of constructing a railroad from the Relay House, a point on the Northern Central railroad, seven miles above Baltimore, to Hagarstown, Md., at which place it will connect with the Franklin railroad, running thence to Chambersburg, Pa., the southern terminus of the Cumberland Valley railroad. The construction of the Western Maryland railroad was commenced in July, 1857, and completed to Owing's Mills, 10 miles, in July, 1858; to Riestertown, 15 miles, in the following September; to Finksburg, 18 miles, in June, 1860; to Westminster, 21 miles, in April, 1861; and to a point about 6 miles above the latter place in November last—making 27 miles in all of completed road. With a trifling exception, the road is graded through to Union Bridge, 12 miles beyond Westminster, and is being steadily pushed forward to completion. The whole length of the road from the Relay House to Hagarstown is about 80 miles. The capital stock authorized is $1,000,000. The funded debt consists of 1st mortgage 6 per cent. coupon bonds, dated December 24, 1858, payable January 1, 1890, and coupons semi-annually January 1, and July 1, at the company's office, Westminster, Md. The amount to be issued under the mortgage is $600,000. These bonds are being endorsed by the City of Baltimore at the rate of $25,000 for each five miles of completed road. We are not informed as to the amount of stock or bonds issued or the amount of the latter endorsed by the city. The work is being executed under the supervision of Messrs. Irwin & Taylor, contractors. The office of the company is at Westminster, Carroll Co., Md. The officers are: Augustus Schriver, President; J. Henry Hoppe, Treasurer; E. F. Reese, Secretary; and W. W. Taylor, Engineer.

Milwaukee and Prairie du Chien Railroad.

This company is the successor of the Milwaukee and Mississippi Railroad Company, and is vested with the railroad and property of the former by virtue of a sale of the same under process of foreclosure of a mortgage. The proceedings were for, and on account of the several classes of creditors and stockholders, and the property of the company purchased at the sale was conveyed to the present company, formed under the general railroad law of the State. Its proceeding as well as the terms upon which it should take the property, and the relation of the several classes of creditors, and the disposition to a certain extent of the earnings of the road, being made the subject of the provisions of a special act. By virtue of this act and of the general law, the new company was formed, and has become vested with all the property and rights of the old.

The capital of the new company is $7,500,000 made up as follows:

1st and only mortgage debt	$2,556,000
1st class 8 per cent. preferred shares	1,095,400
2d " 7 " " "	1,086,800
Common shares	2,761,800
Total	$7,500,000

The new company has no other liability than those stated, nor can it create any new liability unless authorized by two-thirds of the preferred shareholders in amount. All expenses are to be paid monthly before any dividends to the shareholders. Any surplus remaining after payment of interest and dividends to the preferred shareholders, is to be invested in the purchasing and cancellation of the preferred shares till they shall command their par value in the city of New York, or till 6,514 shares, equaling in value to $651,400 are cancelled. The surplus thereafter is to be applied to the common shares till 8,486 shares, equaling in value $848,600 shall be cancelled, when dividends may commence on the common shares.

The bonds of the company fall due in 1891, but provision is made for the conversion of these into the first class preferred shares. Scrip shares are issued to the holders of the bonds entitling them to vote at the meetings of the company, but to no other rights and privileges, till the bonds are converted into the 1st preferred shares—entitled to 8 per cent. dividends. The first class preferred shares, consequently, may be increased from the $1,095,400, the amount at present outstanding, to $3,651,400, which sum is to represent the total amount of the first preferred stock, after the conversion of all the bonds. This plan of reorganization which has been successfully carried out, presents many advantages over the financial condition of most companies. One-third of the capital of the new company is represented by a funded debt, nearly one-third in preferred shares, and one-third in common shares. The company, from the inability of the directors to contract debts cannot become embarrassed, while it presents two classes, at least of productive shares. It is in a position to escape the excessive fluctuations in the prices of its securities, and those financial embarrassments which have been the lot of many roads.

The earnings since January 1, 1861, compared with those of 1860 have been as follows:

	1861.	1860.
January	$54,816	$57,519
February	42,855	32,411
March	41,743	39,501
April	46,221	45,810
May	113,962	59,072
June	139,817	48,597
July	107,400	37,429
August	90,461	60,228
September	134,700	139,761
October	177,879	163,615
	$950,154	$664,036
		950,154
Increase of gross earnings in 10 months		$286,118

The earnings for the year will probably go

fully up to $1,150,000. Estimating the expenses at 60 per cent., the net earnings will be $460,000. The interest and dividends, on the two classes of preferred stock will be $319,060; a portion of the bonds, by agreement, not bearing interest till 1862. By the close of the year the company will probably hold $100,000 for the retirement of its preferred stock.

Intersecting Railways.

THE CITY RAILROADS: THE CROSSING OF ONE TRACK BY THE ROAD OF ANOTHER: COMPANIES DO NOT POSSESS MONOPOLIES OF THE WAY, BUT ONLY EASEMENTS SUBJECT TO THE RIGHTS OF OTHERS.

The cars of the Brooklyn Central and Jamaica Railroad Company run from the foot of Atlantic st. in an easterly direction, dividing the city into two parts, north and south; the cars of the Brooklyn City Railroad Company, running in an opposite direction, cross the Central and Jamaica Road at right angles. This was made the ground of an action by the Central and Jamaica Road against the Brooklyn City Road, they claiming to have a right of property in the street, and an exclusive right to the use of the road, by virtue of a prior act of incorporation. The plaintiffs made a motion for a preliminary injunction at a Special Term of the Supreme Court, in the 2d district, which was denied; and an appeal was then taken from this order to the General Term of the district court. The General Term have now rendered their decision affirming the judgment of the court below, and holding that, when the rails of a railroad company are laid down in a public street, they may be lawfully crossed and passed over by the cars of another company, whenever such passing over can be effected without interfering with, or impeding the progress of the cars passing along the track thus crossed; that it is not an appropriation of the property of the former company for the use of the latter, but a mode of exercising the public right of travel over the highway. The following opinion was rendered at the decision of the case.

BROWN, J.—The justice who heard the motion for an injunction in this action, at the Special Term, determined, that crossing the railway of the plaintiff by the rails and horse cars of the defendant was not an appropriation of the property of the former to the use of the latter, but a mode of exercising the public right of passage, and travel over the highway known as Atlantic street, when such rail was laid down. From this judgment we cannot dissent, for we ought not upon a motion for a preliminary injunction, to affirm what has not yet been authoritatively affirmed in any court, that the mere crossing of the railway track of one city railroad company by the horse or mule cars of another railway company, is such a clear and manifest invasion of the rights of private property as to entitle the complainant to a preliminary injunction. The franchise of the plaintiff is not put in controversy. No one disputes it. It consists in the right to lay down and maintain upon the surface of Atlantic street in the City of Brooklyn a railway, and to operate cars thereon subject to the ordinary uses of the street for passage and travel. No one, however, claims that the plaintiff possesses the right to exclude others from a similar use of the street, or that the legislature may not, in the exercise of its power, grant a similar franchise to another individual or company, provided that it be so exercised and enjoyed as not to impede or obstruct the cars and vehicles of the plaintiff in their transit over their track. The question is not, who has the prior right, or who is bound to give way and wait at the point of intersection, but rather whether there is any authority to cross the track of the plaintiff in a single carriage at a time, drawn by horses upon iron rails laid even with the surface of the street at right angles, or nearly so, with the plaintiff's track. Such a use of a public street has never yet been held to be an additional servitude. The reasonings and remarks of one of the judges in Davis *vs.* the Mayor, etc., of New York, tend to that conclusion, because the feature which he says most widely distinguishes a railroad from ordinary highways and streets, is that the former is a strict monopoly entirely excluding all idea of competition; although he also says, that when the railroad carriages are not moved by the power of steam but by horses, the tracks when they do not rise above the street level may be safely crossed, and to a limited extent, may be used for passing lengthwise. Another of the judges took an opposite view saying "that it by no means follows that a railroad track may not exist in a public highway in a city, open to the public use, as a street improvement under such regulations as the municipal government charged with the superintendence and control of the street may see fit to prescribe.

The idea of a corporate franchise, or of a monopoly existing in favor of individuals, or associations of individuals, has no necessary connection with a railroad. Railroads are physical improvements and may or may not possess the characteristics of a monopoly, or franchise, according to the conditions under which they are built and used. If they simply constitute a feature of the public highways and are open to public use, then it is extremely plain that they are not liable to objections of that character. It is manifest there was no unanimity in the minds of the judges upon the point under consideration, and the case was determined upon other grounds. In the case of Williams *vs.* the New York Central Railroad Co. it was held, that the appropriation of Washington street in the city of Syracuse, to the uses of the defendant's railroad, imposed an additional servitude upon the land dedicated for a street, and entitled the owner of the soil to compensation. That the dedication of the land to the use of the public as a highway was not a dedication to the use of a railroad company, and that the two were essentially different.

This case must be considered like every other in connection with the facts out of which it arose. The trains of the defendant were driven, by the force of steam, at a high rate of speed, passed and repassed over the street every half hour, and numbering something like forty each day. This amounted to an exclusive appropriation of the street to the uses of the company, Its use by the public must have been extremely limited, if not wholly interrupted, and its effect could not be otherwise than to impair and greatly to depreciate the value of the property upon both sides of the street. And thus the land given from the street, and which freed from the railway would have formed a convenient access to the adjoining lands, and greatly enhanced their value, was converted into a means of injury and positive destruction. There is no similarity between that case and the one now under consideration, and it is no authority for the position that a horse railroad laid down in the streets of a city and conducted in the usual manner, is an additional easement or burden imposed upon the land which will entitle the owner of the soil to compensation in damages.

If what I have said be true, the grant of a franchise to the Jamaica Railroad Company to lay down and operate a railroad through Atlantic st., cannot operate to exclude all other companies, operating horse cars, from crossing the street. That street was still to remain a public highway for public travel and public uses, and so long as the railroad company were not impeded, or interrupted, in running its cars and operating the road, it could not complain. The Jamaica company are not, and never were, the owners of the soil. Their rights were those of passage—a mere easement, and if the laying down of the rails of another company in the same street, and the running of horse cars thereon should be deemed and held to be another easement, how could the Jamaica Company complain so long as its right of passage over the street remained uninterrupted. Atlantic street commences at the shore of the bay and extends easterly so that the route of the Jamaica company separates the city into two parts, one lying north, and the other south of the track. The theory of the plaintiff is, that no other railway laid down upon the surface of the street, and no other vehicle running upon such track, and drawn by horses can cross its track without its permission. So that all other city railroads must limit their routes and operation to the districts north or south of Atlantic st.

The same railway shall not extend itself from one to the other, because it cannot do so without crossing the track of the Jamaica road. If we look at another side of this controversy we shall see that the grant to the city railroad company, both by the resolutions of the Common Council and the act of the 23d March, 1854, is to construct and operate a railway upon routes, some of which run north and south, over streets and avenues which intersect and cross Atlantic street. If the claim of the plaintiff can prevail wherever the city company reach the track of the plaintiff their route terminates. Its cars may reach Atlantic street from the north by Furman street and from the south by Columbia street, but there is to be no crossing, no communication, for here, according to the theory of the plaintiff, notwithstanding the express terms of the grant, the routes come to an end. No use is proposed to be made of the Jamaica company's rails. The passage of its cars is not to be interrupted, or impeded, and no injury is to be done to its business. But upon some imaginary right of property, at the point of intersection and which it is thought the defendant will appropriate in crossing, the passage of its cars over the street is to be arrested, and its routes of travel wholly interrupted. It was doubtless the intention of the legislature that both these grants should have effect, that the franchise should become valuable and profitable to the grantees and beneficial to the public at large. There is no other way in which they

can have this effect, and produce the desired result, but by determining that when the rails of a railroad company are laid down in a public street, they may be lawfully crossed, and passed over by the cars of another company, whenever such passing over can be affected without interfering with or impeding the progress of the cars passing along the track thus crossed. In short, to hold, as the judge at the special term held upon the motion for the injunction in this action, "that the crossing of the plaintiff's track by the rails and cars of the defendants is not an appropriation of the property of the former to the use of the latter, but a mode of exercising the public right of transit over the highway."

The order of the special term should be affirmed.

The California Telegraph Tariff.

The rates fixed from St. Louis are as follows:

First 10 words	$4 25
Next 90 words (each)	36
Next 400 words (each)	24
Next 500 words (each)	18
After 1,000 (each)	12

These rates are in conformity to the act of Congress. From New York, Boston, and other Eastern cities, the usual rates to St. Louis are added.

Little Miami and Columbus and Xenia Railroad.

We gave a few months since a statement of the earnings, operating expenses, etc., of the joint companies, from November 30, 1856, to November 30, 1860, together with an abstract of the balance sheet for those years. Annexed is a statement of the gross and net earnings, operating expenses dividends, length, cost, share capital, etc., from commencement, of each road separately; and a statement of their joint operations from November 30, 1853, the date at which they commenced being operated as one line. From this it appears that the gross earnings of the Little Miami Company from 1843 to 1860, inclusive, a period of 18 years, have been $8,748,039, averaging $486,002 per annum. The expenses during the same time have been, $4,803,673, averaging $266,371; and the earnings less expenses, $3,944,366, averaging $219,131. The dividends declared during that time have amounted to 143½ per cent., or an average of 8 per cent. per annum; and the amount disbursed in dividends to $2,879,797, or a yearly average of $159,988, upon an average share capital of $1,861,095. The average mileage has been 75.17, and the average cost of road and equipment $2,466,184. The gross earnings of the Columbus and Xenia Company from 1850 to 1860, inclusive, a period of 11 years have been $3,669,423, averaging $333,584 per annum. The expenses during the same time have been $2,050,938, averaging $186,449; and the earnings less expenses $1,617,485, averaging $147,044. The dividends declared during that time have amounted to 95 per cent., or an average of 8½ per cent. per annum; and the amount disbursed in dividends to $1,192,071, or a yearly average of $108,370, upon an average share capital of $1,264,646. The mileage has been 54.58, and the average cost $1,511,910. The gross earnings of the joint roads from November 30, 1853 to November 30, 1860, a period of 7 years, have been $8,469,961, averaging $1,209,994 per annum; the operating expenses during the same time have been $5,086,033, averaging $726,576; and the earnings less expenses, $3,383,928, averaging $483,418. The dividends declared have amounted to 59 per cent., an average of 8½ per cent. per annum; and the amount disbursed in dividends to $2,620,043, or a yearly average of $374,292, upon an average share capital of $4,458,303. The mileage of the joint roads has been 138.08, and the average cost of road and equipment $5,496,113.

From and including 1854 the "earnings" (*other*) include the dividend on the stock of the Columbus and Xenia R. R. Co. held by the joint companies; and the "current expenses" include the interest paid on the bonds and other indebtedness of both companies as provided for under the agreement of 1853. The "earnings less expenses" for the years inclusive are the *net profits* divided in the proportion of two-thirds to the Little Miami and one-third to the Columbus and Xenia.

New York Bank Statement for November 30.

The Bank Statement shows no diminution in the specie reserves, although large payments have been made on account of the government loans. The specie paid out immediately returns to the banks, demonstrating the position we assumed, that the war exerted no tendency to absorb coin. There is a plethora of it in the country, and we can, without causing the least inconvenience, ship for the next six months the California product, which we may estimate at about $3,000,000, or $5,000,000 per month.

The weekly averages of the Banks of the city of New York, for the week ending Nov. 30, 1861, compared with the previous week, and for the corresponding week for 1860, were as follows:

	Dec. 1, 1860.	Nov. 30, 1861.	Nov. 23, 1861.
Capital	$69,158,000	$69,050,000	$69,050,000
Loans	129,537,459	162,790,302	153,460,376
Specie	18,541,762	41,507,558	41,609,063
Circulation	8,805,944	8,537,176	8,605,895
Gross Deposits	104,354,339	157,239,309	153,631,592
Exchanged	23,631,621	20,934,761	20,272,238
Undrawn	80,722,718	136,304,548	133,359,354
In Sub-Treas'y	3,702,751	8,404,170	8,168,250

The Grain Trade of Chicago for 1861.

Lake navigation for the season being closed, we herewith present a statement of the receipts and shipments of Grain at this point from January 1 to November 25, and although our figures for receipts are made thirty-five days before the close of the year, it will be found that the business of 1861 is far in excess of that of 1860.

For instance, the receipts of Wheat up to date are 16,587,655 bushels, against 14,277,083 bushels for the whole of last year—an increase of 2,310,572 bushels; and estimating the amount to be received during the next thirty days at 350,000 bushels, (a very low estimate,) the increase for the whole year will be 2,600,572 bushels. This is exclusive of that brought in by teams, which is at least 150,000 bushels.

The increase of corn is still greater than that of wheat. In 1860, the total amount received was 15,282,979 bushels, and in 10 months and 25 days in 1861, 25,918,795 bushels—an increase of 10,635,616 bushels.

This large increase is, in a measure, owing to the blockade of the Mississippi, which prevents grain on the Illinois River and in the southern portion of the State from seeking its usual market in Southern cities.

The following are the total receipts and shipments for 1860, and for 1861 up to the present time:

	Receipts. 1860.	Receipts. 1861.
Flour, bbls.	713,348	1,277,911
Wheat, bush.	14,277,083	16,587,655
Corn, bush.	15,282,979	25,918,795
Oats, bush.	1,698,889	1,361,772
Rye, bush.	318,976	462,081
Barley, bush.	617,619	362,069
	Shipments. 1860.	**Shipments. 1861.**
Flour, bbls.	698,132	502,720
Wheat, bush.	12,402,197	14,758,847
Corn, bush.	13,700,113	23,581,702
Oats, bush.	1,081,698	1,479,100
Rye, bush.	156,642	361,412
Barley, bush.	267,249	71,979

This statement includes only the shipments by Lake, exclusive of those by railroad, which have been unusually large during the present year.

The total receipts of all kinds of grain, up to date in 1861, (reducing flour,) are 51,026,917 bushels. In the whole year of 1860 the amount received was 35,762,286 bushels, showing an increase this year already of 15,264,631 bushels.

The shipments by lake were, in 1861, 42,766,670 bushels, and in 1860, 31,108,559 bushels, showing an increase of 11,658,111 bushels.

The amount forwarded by railroad, the present year, may be estimated about as follows: flour, 525,000 bbls.; wheat, 600,000 bushels; corn, 500,000 bushels; oats, 50,000 bushels; rye, 40,000 bushels; barley, 180,000 bushels. Total of grain shipped by railroad, 3,995,000—making the entire shipments of all kinds of grain from this port in 1861, up to date, 45,761,670. The excess of receipts over shipments, 5,265,247 bushels.—*Chic. Ev. Jour. Nov. 27.*

Railroad Earnings for October.

We give below a comparative statement of the earnings of several leading railroads for October, 1861 and 1860. They average very nearly the same for the two years. The greatest falling off has been in the earnings of the Reading, the traffic of which has been almost entirely derived from the transportation of coal. The earnings of the Illinois Central Railroad have been affected by the closing of the Mississippi River. We learn that the services performed for the government in the transportation of troops and munitions of war are not embraced in the monthly receipts. The exhibit, on the whole, is very satisfactory. The traffic for the winter bids fair to be large. The increase in the earnings of the Erie is particularly noticable. Those of the New York Central will probably show an equal rate of increase over 1860. The earnings of the two roads for November will probably be equal to those for October.

Name of Road.	1861.	1860.
Galena and Chicago	$220,146	$252,108
Chicago and Rock Island	147,168	141,601
Cleveland and Toledo	96,434	91,583
Michigan Central	307,332	300,474
Hudson River	173,260	193,950
Toledo, Wabash and Western	162,858	125,026
Chicago, Burlington and Quincy	214,051	239,463
New York and Harlem	97,845	108,257
Milwaukee and Prairie du Chien	177,879	163,615
Chicago and Northwestern	105,059	108,737
Illinois Central	284,630	321,059
New York and Erie	722,362	585,597
Philadelphia and Reading	276,208	368,956

Railroad Earnings--Weekly.

The earnings of the Chicago and Rock Island road, the 3d week in Nov., '61, were $32,938
Do. 1860 25,403

Increase $7,535

The earnings of the Toledo, Wabash and Western Railroad the 3d week in November, 1861, were $32,493 99
Do. 1860 .... 19,270 83

Increase $13,223 16

The earnings of the St. Louis, Alton and Chicago Railroad for the 3d week in Nov., were:

	1861.	1860.
Passengers	$5,300 75	$7,754 08
Freight	15,949 71	12,361 42
Sundries	855 73	858 83
Total	$22,106 19	$20,974 33
Increase	1,131 86	
Total this month to date	$66,492 07	$61,452 47
Total since Jan., 1st	906,433 58	861,405 56

The receipts of the Chicago and Northwestern Railroad for the 3d week of November, 1861, were $23,402 40
Do. 1860 .... 19,356 27

Increase $4,046 13

The traffic of the Great Western Railway of Canada for the week ending Nov. 29, 1861, was as follows:

Passenger $16,154 22
Freight and live stock 30,977 67
Mails and sundries 1,334 45

Total $48,466 34
Corresponding week of last year 40,542 73

Increase $7,923 61

The Milwaukee and Prairie du Chien Railroad earned for the 3d week in Nov., 1861. $27,263 45
Do., 1860 .... 20,661 70

Increase $6,601 75

The earnings of the Galena and Chicago Railroad the 4th week in Nov., 1861, were $39,785
Do., 1860 24,998

Increase $14,787

The Cleveland and Toledo Railroad earned the 4th week in November, 1861 ....$30,456
Do., 1860 26,150

Increase $4,306

The receipts of the Grand Trunk Railway of Canada for the week ending Nov. 23, were $90,110 15
Corresponding week, 1860 .... 78,423 59

Increase in 1861 ....$11,686 56
Total traffic from July 1st, 1861 ....$1,506,866 26
Corresponding period previous year. 1,450,622 31

Increase $56,243 95

Railroad Earnings--Monthly.

The earnings of the Hudson River Railroad for November, 1861, were $197,761 77
" 1860. .... 169,548 71

Increase $28,213 06

The earnings of the Panama road in October were $148,219 79, showing a gain over October, 1860.

The traffic on the Norwich and Worcester road for October shows a much more favorable result than previous months. The figures are:

	1860.	1861.
From passengers	$11,795	$13,898
From freight	24,464	21,295
Total	$36,259	$35,493
Decrease		$765 86

The company ask a contribution of five per cent. from the stockholders to the stock of the new propellers.

The earnings of the Galena and Chicago Railroad for November, 1861, were $172,484
November, 1860 141,656

Increase $29,828

The earnings of the Chicago and Rock Island Railroad for November, 1861, were $119,324
Do., 1860 88,657

Increase $30,667

The earnings of the Cleveland and Toledo Railroad in November, 1861, were $89 397
Do., 1860 83,574

Increase $5,823

American Railroad Journal.

Saturday, December 7, 1861.

Share and Money Market.

The Share Market the past week has been fluctuating with, on the whole, a declining tendency. The sitting of Congress naturally draws attention from the market, which falls off for want of support. There has, however, been no considerable change in the aspect of affairs since our last issue. The report of the Secretary of the Treasury is anxiously looked to as indicating the position and financial policy of the government. His department is now the most important branch of the executive. Money continues very plenty, notwithstanding the calls of government. Exchange has again fallen off nearly one per cent. The shipments of produce, which continues very large, supply all the bills wanted. There appears to be no immediate prospect of the shipment of gold. This depends somewhat upon the ability of our railroads after the close of the canals, to bring forward produce. At present no apprehension exists, while the influx from California and from abroad still continues.

The Portland, Saco and Portsmouth Railroad Company has declared a semi-annual dividend of 3 per cent. payable December 10.

The Delaware and Hudson Canal Company has declared a semi-annual dividend of 3½ per cent., payable on the 20th inst.

The Chemung Railroad Company has declared a dividend of 4 per cent., payable on demand.

The interest coupons on the first mortgage bonds of the Buffalo, New York and Erie Railroad Company, will be paid on presentation at the Bank of Commerce.

The December coupons on the Milwaukee City Readjustment bonds will be paid by W. Schall & Co., 58 Exchange place.

The New York and New Haven Company's interest coupons, due December 1st, will be paid at the Bank of the Republic, or at the treasurer's office in Fourth avenue.

The interest on Iowa State Stock, due January 1, 1862, will be then paid at the Citizens' Bank, in this city.

The United States Court sitting in Pittsburg, has finally decided that Pittsburg and Alleghany *must* pay their bonds. The judgments carried up against the two cities, amount to $140,000.

The interest on the fifth mortgage bonds of the New York and Erie Railroad Company, due on the 1st day of December, 1861, will be paid on presentation of the coupons at the office of the Receiver. The Secretary of the Company has communicated the following in reference to the payment of interest by the receiver. He says:

By order of court the receiver is to pay the interest falling due 1st December on the fifth mortgage, and not the "accrued" interest. The company is *not* "paying all the back coupons on the fourth mortgage."

The amount of $704,000, being arrears of coupons on the fourth and fifth mortgage, surrendered to the trustees under the plan of re-organization, is represented by scrip or trustees' certificates, bearing interest from the 1st May last, and will be paid from the first earnings of the road, after paying interest, as it accrues on the mortgage debt. The present rate of earnings of the road will enable the company to pay the amount in a very short time.

The assessment of two and one-half (2½) dollars per share on stock represented by trustees' scrip is now due, and payable at this office with interest from September 1. The new certificates of stock will be issued on surrender of the trustees' scrip and payment of assessment, for which assessment a receipt will be issued, redeemable with interest at the office of the company from the first net earnings of the road, before the payment of dividends on the preferred stock.

The Hudson River Railroad Company, through the Commissioners of the sinking fund, invites tenders for $33,000 second mortgage sinking funds till the 18th of December.

The contracts for the proposed change of the line of the Chicago and North-western Railway, so that it will run through Neenah and Menasha, have been taken by responsible parties, and the work is to be actively prosecuted.

The Detroit and Milwaukee Railway Company proposes putting two propellers on the route between Grand Haven and Milwaukee this winter.

The St. Louis *Democrat* publishes the following in reference to the St. Louis County bonds, which matured on the 1st inst.:

"The condition of the county indebtedness having been incorrectly reported in some of the newspapers of the city, we give the following authentic statement of the matter:

County Indebtedness maturing Dec. 1, 1861.

Int. (provided for in full)	$35,000
250 bonds, 1,000 each, maturing same time	$250,000
Remitted for same	125,000
Balance due	$125,000

To make arrangements for an extension of this amount ($125,000) is the object of Judge LIGHNERS visit to New York."

The County Commissioners entertain full expectation of being able to pay the remaining 50 per cent. within the next 90 days.

Rates of Foreign Exchange.

The rates of Foreign Exchange, as quoted by N. BRANDT, Broker, No. 39 Exchange-place, for the steamer of December 7, were as follows:

London—60 days' sight	108¾ per cent.
London—3 days' sight	109¾ "
Paris—60 days' sight, per dollar	5f. 16c.
Paris—3 days' sight, per dollar	5f. 20c.
Amsterdam—60 days' sight, per guilder	41c.
Hamburg—60 days' sight, per marc banco	36¼c.
Frankfort—60 days' sight, per florin	41¼c.
Bremen—60 days' sight, per rix dollar	79¼c.

Marietta and Cincinnati Railway.

We gave in September last the report of the President of this company issued in London, and bearing date June 22, 1861. It embraced the operations of the company from the date of the re-organization, July 29, 1860, to the 1st of March last. Below we give the 1st annual report of the directors, since the re-organization. It covers a period of 11½ months, from August 15, 1860, to August 1, 1861. The earnings of the road during this time have, been as given in detail in the general statement, $459,649 85; and the expenses $380,849 65, leaving, after deducting $20,451 12 advanced to Trustees account, a net balance of $58,349 08. The expenses were as follows:

Locomotive running	$62,044 32
Traffic expenses	81.041 22
Telegraph expenses	3,827 01
General charges	95,604 48
Repairs	138,332 62
	$380,849 65

We give the report and general balance sheet of the company entire:

To the Stockholders of the Marietta and Cincinnati Railway, as re-organized.

Agreeably to the requirements of the charter, the Board of Directors submit the following as the first Annual Report of the Marietta and Cincinnati Railroad Company, (as re-organized), on the 29th day of July, 1860, in pursuance of the charter and a special law of the General Assembly of the State of Ohio, entitled "An Act for the Relief of the Creditors and Stockholders of the Marietta and Cincinnati Railroad Company."

Under date of 22d day of June last, the Board of Directors submitted to the stockholders a report of the operations of the Company, from the date of the re-organization to the 1st day of March last. The report embraced communications from Mr. John Waddle, the Chief Engineer, upon the condition of the railway and property of the company, and from Mr. John Durand, Superintendent, in relation to the operations of the railway.

TRUSTEES' LOAN.

For the purpose of enabling the Board of Trustees to purchase the railway and property of the Company, application was made to the original bondholders by the "London Committee," for a loan of 5 per cent. upon the first and second mortgage bonds, issued by the company previous to its re-organization. To this call there was a prompt and favorable response, without which the property could not have been purchased for the bondholders, who are now the real owners of the railway. The conditions upon which these contributions were made to the "London Committee" were that it should be refunded, with interest, out of the first sales of bonds, to be made by the Company when re-organized. The obligation to refund this money was transmitted from the Committee to the "Board of Trustees," selected by the "London Committee," to purchase the property and to re-organize the company, and, when the company was re organized, the obligation was again transferred and the duty of re-payment passed with the title of the property, from the Board of Trustees to the Company, as re-organized.

At the first meeting of the stockholders of the re-organized Company (at which meeting nearly all of the stock was represented) the stockholders assumed the payment of the "Trustees' Loan" referred to above. A short period only elapsed, however, until a severe blow was struck at American credit by the extensive rebellion in the Southern States. The consequence was an utter destruction of the credit of all unfinished railways and other public enterprises in the United States. The Boar l of Directors were, therefore, unable to negotiate the bonds of the Company for the purpose of re-imbursing this loan. Consequently the Company were compelled to ask the contributors to convert this loan into 7 per cent. mortgage bonds of the re-organized Company.

This request was made through the "London Committee," and it is with great pleasure the Board of Directors are now able to announce to the stockholders that of a body of European contributors, numbering over 200 individuals and firms, only one has declined.

The "Trustees' Loan" may be considered as disposed of, and not longer in the way of negotiating bonds for money, to be expended in perfecting and placing the property of the Company in a condition to become valuable.

RESULTS OF THE FIRST YEAR.

The revenue from traffic for the year is in excess of the estimate presented in the recent report, notwithstanding the loss of our only connecting line to the seaboard (the Baltimore and Ohio Railway), which for the time is not operated for through traffic, by reason of the rebellion in the State of Virginia.*

The revenues, for the transportation of troops and munitions of war, have, to a considerable extent, made good the loss of through traffic.

From the accounts published herewith, the following statement is compiled:—

The gross earnings for the fiscal year (11½ months), from Aug. 15, 1860, to Aug. 1, 1861, amounted to	$459,649 85
Less working expenses	380,849 65
Leaving net earnings	$78,800 20
The rent of $5,000, per month, paid for the use of the Little Miami railway, from Loveland to Cincinnati, is embraced in the item of "working expenses"	57,500 00
	$136,300 20

By the foregoing it will appear that the working expenses, (exclusive of Little Miami Railroad Rent), were 70.34 per cent. of the gross earnings.

The net earnings (after paying the rent of the Little Miami Company) of $78,800 20 for eleven and a-half months, is at the rate of $82,226 29 per annum, equal to the interest at 7 per cent. per annum upon $1,174,661 28, being a greater sum than is required to place the property in good condition.

IMMEDIATE WANTS OF THE COMPANY.

The stockholders are aware that the railway now in use is not finished nor in condition for safe and profitable use—that it is operated at great cost and disadvantage, over high grades, in two instances at the rate of 250 feet ascent per mile, besides numerous grades varying from 70 to 110 feet per mile. When the railway was projected its maximum gradients were fixed at 52 feet per mile, but for want of means it became necessary to deviate from the original plans, and resort to temporary lines at various points on the route. By the report of the Engineer recently submitted to the stockholders, will appear his estimate of completing and perfecting the present main line of the railway on the original plan, making it in all respects a first class road, and the annual expenditures in doing the work as follows:—

1861, say	$541,371 05
1862	302,123 20
1863	89,744 25
After 1863	156,581 90
	$1,089,820 40

In the first year's expenditures is embraced the completion of three tunnels, thus avoiding the high gradients to which reference has been made, the great hinderances to the economical working of the line, the rebuilding of the most important bridges, and filling up with earth and masonry many of the wood trestles which are now rapidly decaying and becoming unsafe for use.

* The Government of the United States has recently directed the re-opening of the Baltimore and Ohio Railroad. This will restore to the Marietta and Cincinnati Railway its through traffic.

In addition to the sum required by the Engineer for the ensuing year, funds should be provided for the following purposes:—

To complete payments for Union Railway contracts	$54,852
Floating debts	80,000
Machinery department and shops	60,000
	$194,852
Add Engineer's estimates	541,371
Total sum required in about twelve equal monthly instalments	$746,223
If bonds were negotiated at 10 per cent. discount to produce the above sum, it would require in bonds, say	$830,000
To this add the bonds issued for Trustees' Loan, say	250,000
Total	$1,080,000

The above expenditure being promptly and judiciously made, would so improve the character and condition of the railway as to enable the company to conduct its traffic promptly, efficiently, and economically, and would result in a large increase of traffic and revenue.

The view of the Board of Directors is, that from that period the Company would have sufficient financial strength and credit to supply its further pecuniary needs in the open market. But in the present state of affairs it is useless to look beyond the owners of the property (the preference shareholders) for the means to save the railway from further depreciation, if not absolute destruction.

The Board of Directors again invite the serious attention of stockholders to the unfinished condition of their property, by re-publishing the following extracts from the recent "Report" of the Chief Engineer, showing the necessity of immediately providing the means for its completion, in order to render it safe, productive and valuable. It will be observed, that the Engineer's Report was prepared early in the present year, and as this year is lost, consequently the greater the necessity for prompt action on the part of stockholders. The Engineer says:

I respectfully submit the results of examinations and surveys made for the purpose of determining the location, plans, and cost of completing, in a perfect and substantial manner, the part of the road now in use between Loveland and Harmar.

The maximum gradient of one foot rise in 100 feet, or 52.8 feet per mile, which was assumed at the outset for the construction of the road, and which was adhered to on the finished portions of it, was adopted as the maximum on the grades yet to be completed. The estimates are based on the adoption of first class masonry, and of the most substantial manner for the entire completion of all the work. The embankments will be fifteen feet wide, and excavations twenty feet wide at grade line, with side slopes of one and a-half feet horizontal base to one foot vertical height for embankments and cuts in earth, and steeper slopes where the cuts are in rock. Bridges are to be built of white pine timber, on the plan of Howe's improved truss," and to be covered with metal roofs, and sides enclosed with white pine boards.

The plans and estimates contemplate the renewal of all the wooden trussed bridges, which have not recently been re-built, and the protection of the new structures by roofing and siding; the removal of all the trestle bridges, and the supplying the place of them with stone bridges, or culverts and earth embankments, in every case but one. The crossing of the Little Hocking river, where a trussed bridge with stone abutments and piers is proposed, the cutting down of all grades which are steeper than the maximum of 52.8 feet per mile; the improvement of sharp curves, the changing of the location where, to cheapen construction, objectionable curves and grades were resorted to with the expectation that they would be but temporarily used, the opening of all of the tunnels, the ballasting of the entire

road, and in short bringing it up to a completed and perfect road, which may reasonably and confidently claim a large share of the business between the east and west, and which may successfully compete for the travel and traffic now lost to it on account of its unfinished condition.

The road has been opened for business through its entire length about four years, and notwithstanding the difficulties which it has contended with, has been performing, with tolerable satisfaction to its patrons, the business which they have supplied, and has been gradually growing in favor and increasing in business. But the incomplete state in which it was opened and yet remains, has made the operation of it expensive to the company, and has also prevented it from drawing from other sources than the local business accumulating on its line, the share of trade and travel which, if it were placed in good condition, it might, and would, command. The interests of the stockholders require that the road should be completed at an early day, and indeed the possibility of continuing it open for business, is contingent upon proceeding promptly to renew a large number of the trussed bridges, and to make provision for soon dispensing with the great amount of trestling on the east end of the road. This trestling has been standing from five to seven years, and cannot be relied on much longer.

It is also important to the interests of the company, that the tunnels east of Athens should be finished without unnecessary delay;* one of them is now under contract to be completed on the 1st of September next. The one next in importance will require a longer time, but with adequate means, can be opened within a year.

The road from Loveland to 23 miles east of Chillicothe, a distance of 96 miles, was completed as originally designed, except a part of the ballast, and in a few cases, where a scarcity of building stone on the line led to the adoption of wood structures for passing over streams and roads. Masonry is now, or will soon be required at these places and is provided for in the estimates. But little besides the ballast for part of the distance and the renewal of the bridge superstructures, will be required on this division of the road. The original bridges were, as was common in the building of the railroads of the country, built of the kinds of timber growing along the line of the road, and having been left standing without covering or protection from weather, from seven to nine years, the removal of them cannot properly or safely be longer postponed.

Between the point 23 miles east of Chillicothe and Athens 37½ miles, there are several cuts to make in order to bring the road to its proper location and grade, and a number of heavy embankments to be built to take the place of trestle bridges now supporting the track. A large amount of masonry is also required for passing streams, and for abutments and piers to bridges, which are now supported on wooden trestles. These and the ballasting of the track make up the principal items in the estimate of cost of perfecting this part of the road.

From Athens to Harmar, 39½ miles, the road traverses a hilly portion of the State; and, as a consequence, the construction of it is expensive. A large amount of work is yet required on this part of the road, there being three tunnels east of Athens to complete, and numerous heavy cuts and embankments to be made. Many of the present grades on this section are very steep, requiring great excess of locomotive power where they occur, beyond what is necessary on the rest of the road, and rendering the transportation of freights over them unusually tedious and expensive.

In the following estimates, I have classified the work in such a way as to divide it between the years 1861, 1862, and 1863, and placed in another division such work as may be postponed to a later period than 1863.

In the year 1861, only such work is placed as, in my opinion, the safety of trains and the obvious interests of the company require, should be done as speedily as possible. In the other period the remainder of the work is arranged in such a way as to give precedence in time to that which is most important and urgent.

To complete in 1861 all of the work which is designed to be done in that year, it will be necessary that an early commencement should be made, with ample means and a large force. Delay in beginning the work will retard its completion, and in view of the necessity for prompt action in the matter of rebuilding bridges and opening the Vanderwarker and Pilcher tunnels, it is exceedingly desirable that the work be commenced without delay." Respectfully submitted,

NOAH L. WILSON, President.

No. 38 Albemarle st., London, W.

* Not finished for want of means.

(From the Journal of the Franklin Institute.)

On the Erie Experiments on Steam Expansion by U. S. Naval Engineers.

By Samuel McElroy, C. E.

During a part of the months of November, December, and January, of last winter, experiments were made at Erie, on the U. S. Steamer *Michigan*, under the order of the Secretary of the Navy, by a Board of Chief Engineers of the Naval Engineer Corps, to determine certain questions in reference to the economy of steam expansion. Previous experiments made by the chief officer of the Board, had induced him to assert the fallacy of the commonly received doctrine of economy in expansion, and these observations were undertaken to pursue the investigation on a more perfect engine, and with greater care. A report of the results has been published by the Navy Department, of which a synopsis at length is given in the April number of this Journal, by a member of the Board.

The conclusions reported by this Board are of a very radical and revolutionary character, so far as they effect principles which have been accepted in practice from a very early period in the history of the steam engine applied to actual work. They differ from the whole tenor of experimental observation and theoretical deductions, and if accepted by the profession, would modify at once our proportions of working parts, and our applications of power. Their argument as to the economy of expansion is contained in the following quotation from the report:—

"The results obtained from this engine are rigorously applicable to all others in which saturated steam is employed in a cylinder not steam jacketed, and show conclusively the utter futility of attempting to realize an economical gain in fuel under such conditions by expanding the steam beyond the very moderate limit of one-and-a-half times; and that, if the expansion be carried to three times, a positive loss is incurred. Also, that if measures of expansion as high as those due to cutting off the steam at $\frac{1}{3}$th or $\frac{4}{15}$ths of the stroke are employed, the economy is considerably less than with steam used absolutely without expansion." It is also stated, in those cases where a reduction is to be made in power, on a cylinder cutting off at the "economical limit of $\frac{7}{10}$ths," that, as to a choice between a closer cut-off and the use of the throttle, "in fact, the two modes of reducing the power may be considered equal in respect of economy of fuel; but, in every other respect, the choice is immeasureably in favor of the throttle valve."

Language of this kind admits of no misconstruction. It throws the gauntlet at the foot of universal professional opinion and practice boldly and unequivocally. It declares that in all ordinary working cylinders, not steam jacketed, there is no gain in cutting off closer than at two-fifths, and that a positive loss follows a cut-off at one-quarter stroke. It is better to carry full steam, we are told, than to cut off at one-sixth. And farther than this, it is better to throttle the steam for any reduction inside of seven-tenths cut-off, than to cut off with the main valve.

An opinion of this kind, expressed in this way has a certain gravity, and merits an attention which might be denied the publication of any individual conclusion to the same effect. It claims to be issued by authority, it involves the honor of the Naval Engineer Corps, it passes out to other countries as the conclusion of American science, and it pretends to be infallible. This Board informs us that its report is "only one more illustration of the well-known fact that the histories of all sciences are but records of mistakes and misconceptions, arising from the application of fallacious theories, which, once plausibly advanced, were long believed in, from an unwillingness to investigate for ourselves, but which exploded at the first touch of the *experimentum crucis*." It is a matter, therefore, of some interest to the profession to inquire how far this assumption of new light will in itself bear the test which is claimed to have been applied, for the first time, to all the past.

We may justly, then, in our examination of these opinions and the experiments on which they are based, subject them to severe analysis, in order to detect any sources of error. All revolutions, political or scientific, must be content to bear the burden of proof, and cannot be alloted the benefit of any doubts. If, in ordinary processes, according with established principles, we may leave unquestioned between the initiative and the final result many of the intermediate operations, it is manifest that nothing of the kind can be claimed or allowed in a case like this, which seems to contravert well-known and long-established mechanical laws. And we have, therefore, a right to determine that this report shall only be accepted, if its experiments were correct as to the principle of experiment, the method of experiment, and the most consistent and conclusive results of experiment. Any contradictions occurring at any stage of the process, any palpable or possible errors in process, any anomalous results or inferences, are fatal to the whole, and must be so received. The first great lesson which a thorough-bred engineer learns, is to take nothing for granted; and however we may personally respect and value the character and experience of the members of this Board, we must judge of their verdict by fixed and positive conditions of analysis, and in no other way. If they have failed to determine with rigid accuracy a single important link in the chain of evidence, the report falls to the ground; and if processes in detail are suppressed, requisite to establish evidence, the argument of the report is, so far, vitiated.

The reader of this report cannot fail to be impressed with its parade of accuracy. Elaborate descriptions are given of certain precautions taken, and sizes in close detail of the boilers and engines are recorded with interesting fidelity. The precise number of inches between the bottom of the feed-water tank and the floor is not omitted. Equally elaborate are the arguments on the results obtained, both which features comprise a report of some 38 pages. But when, with some educated regard for such matters, we examine this report for the *notes of the experiments* in similar satisfactory detail, we are surprised to find them entirely omitted, and have no key to them whatever, except the aggregated results given in two tables, arranged in seven columns, alloted to as many distinct experiments. These tables are merely averages and aggregates of the results in detail, and therefore define the several processes in a general way. To have known precisely the times and manner of coal supply, tank supply, cleaning fires, starting and hauling fires, variations of pressure, and the like, as to boilers, we might well have excused an elaborate notice of the kind, material, and diverse sizes of their flues, or any other matters irrelevant to the questions at issue. And this remark is applicable to all the other processes tabulated. The counsel for the defendant has no opportunity to cross-question the witnesses. The argument is confined to the general allegations. We do not mean to convey the impression here that these tables are incorrectly reported, but we do intend to say, that the report has a pretension of accuracy in detail which is not warranted by its actual statistics of essential points. It does not enable us to decide any questions suggested by the tables themselves.

The correctness of the opinions expressed by the Board is to be judged by the results obtained by it, so far as the course of examination adopted was itself correct. If any objections exist as to any portion of such course, they invalidate, in proportion to their character, the results obtained. The first point, then, to be considered, is the Course of Experiment pursued.

The following general description of method is deduced from the statements of the report:—

The ship has two engines and two boilers. The starboard engine and both wheels were used, with *both boilers*, for all the trials reported, the port engine being disconnected.

The boiler evaporation was determined by indicator cards taken hourly, and by tank measurements.

Each experiment continued precisely 72 hours; there being 7 reported with a steam travel in the cylinder varying from $\frac{11}{15}$ths to $\frac{4}{15}$ths.

The boiler pressure was nearly uniform in all the trials.

The ship was securred to the wharf, so that the wheels paddled the water aft.

Before an experiment, the engine was operated for several hours. When all was ready as to water level and boiler pressure, with "average fires," the notes were commenced. At the close, the boiler level was corrected, and the fires made the same "as nearly as could be estimated." The friction and resistance of the engine and wheel-arms and rims, were determined by taking off the floats, and working the engine from 6 to 22 turns, taking indicator cards to obtain a reliable mean for each rate of speed.

During an experiment, the engine was neither stopped, slowed down, nor in any way changed in condition.

Due precautions were taken as to the tightness of valves, &c., correctness of counter, coal account, and other important notes.

To illustrate more fully the course of experiment adopted, the following abstract is made from table No. 1 of the report, which gives the "data and results." Table No. 2 equates these results in various ways, and is based on No. 1.

No. of experiment.	Date of commencement.	Boiler gauge pressure.	Mean cylinder pressure.	Vacuum.	Cut-off.	Revolutions.
1	Dec. 30, 4 A. M.,	21	19.9	25.8	8-10	13.69
2	Jan. 2, 4 "	21	13.6	25.6	1-6	11.17
3	" 5, 6 "	21	17.4	25.8	1-4	13.87
4	" 8, 10 "	21	24.1	26.3	4-9	17.28
5	" 18, 10 P. M.,	19.5	27.6	26.1	7-10	15.56
6	" 21, 12 "	21	28.8	26.5	11-12	20.61
7	" 25, 6 "	22	8.8	24.1	4-5	14.10

No. of experiment.	Horse power.	Coal per sq. foot of grate.	Coal per H. P. per hour.	Feed-water per coal by tank.	Kind of coal.
1	123.7	6.28	4.23	8.33	Ormsby.
2	74.5	2.79	4.58	8.09	"
3	118.4	5.21	3.96	8.70	"
4	204.4	9.51	4.19	7.90	"
5	210.8	11.41	4.87	7.14	Anthracite.
6	301.4	18.52	5.53	7.22	Brookfield.
7	60.9	4.11	6.08	7.58	Ormsby.

Notwithstanding the claim of this report that it is the "*experimentum crucis*" which has, for the first time, successfully opposed rigid experiment against "fallacious theories," we shall assume here, that there are certain general principles by which its particular course is to be tested, which overrule any experimental results, and decide the question of acceptance or rejection by positive laws.

We shall not pause here to defend this assumption by any argument at length. It is a great mistake to assert, in these latter days, that engineering is a science hitherto purely theoretical. On the contrary, it is clear that its laws have been gradually determined from the absolute results of long continued observations, and eliminated from the unmistakeable precepts of actual trial. This is the glory of the profession, that from known results it has framed its precepts and laws, under the guidance of which, in certain established methods, it may claim infallibility, without arrogance. And it is the leading principle of the profession, that all conjecture and discussion should be brought to the test of trial and by such test to stand or fall. There is no need of multiplying words or adducing evidences of so well

known a statement as this. Every engineer who has had to assume the responsibility of important constructions, knows by experience that it is true.

As appears from its report, the Board, in experimenting, adopted a uniform standard of low boiler-pressure for all the variations of work, and changed the resistances of the wheels by removing the floats. For all grades of expansion then, low steam was used, a uniform initial pressure, and variable resistances.

We object to the correctness of this method, for the following reasons:

The problem which presents itself to an engineer in operating his engine and his boilers, is defined by the amount of work to be done and the most economical method of doing it within limits of safety. And with a given engine in place, like the *Michigan's*, the argument between expansion and non-expansion should have been determined by a fixed standard of piston resistance, and not by a fixed standard of boiler pressure, with variable resistances. Viewed in this light, which is the only correct one, the mission of this Board was to experiment, first on such a boiler pressure as with a full steam stroke would fulfil the usual duties of the engine, and then maintaining the same *average cylinder pressure*, and the same engine duty, to test the economical results with successive degrees of expansion, and corresponding increments of initial pressure. This is the real matter at issue—whether it is cheaper to carry high steam and expand, or to carry low steam and follow at full stroke.

As to its opinion on this subject, the Board, in a part of its report, leaves us distinctly to infer that its results, as tabulated, are conclusive against the use of higher steam. Its argument, as given on pages 33 and 34, is based on the assumed fact that it has demonstrated an immense loss in any high range of expansion, and it follows by consequence, that a greater boiler pressure, as involving a closer cut-off, would be useless. Unfortunately for our confidence in its tables, which will not be found to bear analysis, it has not favored us with any practical demonstration of its singular logic, and as it seems to be simply Quixotic to pause here, for the purpose of establishing the proposition which is plain to the rudest coal-heaver, that it is cheaper to make high steam than low steam, we content ourselves at present with saying that this neglect, in itself, as a misapprehension of principle, is sufficient to overthrow all these carefully eliminated tables and high toned results. The relative economy of high and low pressure for a given amount of work has long since passed beyond the region of conjecture. Those of us who have seen engines of enormous contract value, hanging for acceptance or rejection on the rise of the boiler gauge, and the curve of an indicator card, know something of this in practice, and by demonstrations of the highest order.

Again, we find in these experiments, that with the same pressure and the same grate surface, the rate of combustion in the boilers varies from 18.52 pounds per square foot to 3.79.

In this way the Board disposes in a very summary manner of the discussion which has long agitated the engineering world, as to the relative merits of quick and slow combustion. While one class has claimed superior advantage in slow combustion, and has specially adapted its boilers to this process, their opponents pronounce in favor of quick combustion, and modify their forms accordingly. The discussion also embraces varieties of coal, one being deemed most suitable for a slow fire, and another for a stronger fire. Volume after volume, experiment after experiment, debate after debate, are extant on this subject. But here, without argument or apology, this "fallacious" range of opinion is laid upon the shelf, and in the same boilers, with the same variety of coal, the rate of combustion is varied about *four hundred* per cent.! And the highest rate is that required, of all these, for the ordinary speed of the ship, for which these boilers were proportioned. The tabular results of this board, then, are just as valuable and just as conclusive on the theory of variable combustion as they are on that of variable expansion.

(To be continued.)

Extracts from the Report of the Secretary of War.

STRENGTH OF THE ARMY.

The following statement presents the entire estimated strength of the army, both volunteers and regulars:

States.	Volunteers. Three months.	For the war.	Aggregate.
California	.....	4,688	4,688
Connecticut	2,236	12,400	14,636

RAILROAD COMPETITION—NECESSITY FOR ADDITIONAL FACILITIES.

Corporations, like individuals, are liable to be governed by selfish motives in the absence of competition. An instance of this kind occurred in the management of the railroads between Baltimore and New York. The sum of $6 was charged upon that route for the transportation of each soldier from New York to Baltimore. As this rate seemed extravagant to the Department, when considered in connection with the great increase of trade upon those roads, made necessary by the wants of the Government, inquiry was made concerning the expediency of using the roads from New York to Baltimore *via* Harrisburg. The result was an arrangement by which troops were brought by the last named route at $4 each; and, as a consequence, this rate was at once necessarily adopted by all the railroads in the loyal States, making a saving to the Government of 33⅓ per cent. in all its transportation of soldiers, and at the same time giving to the railroads, through increased business, a liberal compensation.

The railroad connection between Washington and Baltimore has been lately much improved by additional sidings, and by extensions in this city. In order, however, that abundant supplies may always be at the command of the Department, arrangements should be made for laying a double track between this city and Annapolis Junction, with improved sidings and facilities at Annapolis and along the branch road.

Should the navigation of the Potomac River be interrupted by blockade, or the severities of Winter, it would become absolutely necessary, for the proper supply of troops in the District of Columbia and vicinity, and of the inhabitants of this city, to provide additional railroad connection between Washington and Baltimore. A responsible company, with a charter from the State of Maryland, have proposed to do this upon condition that the Government will indorse their bonds; they binding themselves to set aside annually a sufficient sum for their redemption at maturity, and thus eventually release the Government from any liability whatever, and to charge, for transportation, rates in no case to exceed four cents a ton per mile for freight, and three cents per mile for passengers. During the continuance of the war, however, their charge for passengers is not to exceed two cents per mile. The charge for the transportation of passengers between the two cities is at present three and three-quarter cents per mile, and for freight, the rates per ton will average from five to eight cents per mile. The large saving to the Government in cost of transportation, would amply compensate for all liability, and give to the citizens of all the loyal States greatly improved facilities for reaching the National Capital, and at much less rates than they are now compelled to pay. To the citizens of the District it would cheapen the cost of supplies, and prove of immense value in every respect.

I recommend that a railway be constructed through this city, from the Navy-yard, by the Capitol, to Georgetown, forming connections with the existing railroad depots, and using the Aqueduct bridge for the purpose of crossing the river at Georgetown. By a junction of this proposed railway with the Orange and Alexandria Railroad, not only would the communication with our troops in Virginia be greatly improved, but an easy access be obtained to the Baltimore and Ohio Railroad near Harper's Ferry, by means of the Loudoun and Hampshire Railroad. To its importance as affording facilities for moving troops and supplies in time of war, may be added the future benefits it would confer upon the District of Columbia. The outlay required would be saved in a few months by enabling the Government to dispense with the expensive ferry at Georgetown, and by greatly decreasing the costly wagon transportation of the army through this city.

BALTIMORE AND OHIO RAILROAD.

The injuries to railroads, instigated by the rebel authorities of Baltimore, in order to embarrass communication with the North and West, *via* Harrisburg, and with the East, *via* Philadelphia, have been repaired by the different companies that own them. That portion of the Baltimore and Ohio Railroad west of Harper's Ferry which was so ruthlessly destroyed by the rebels, has not yet been restored. The great interests of trade require that this road should be re-opened as speedily as possible by the company, for the transportation of the immense surplus of the agricultural productions of the West. To aid this object the Department has tendered to the company a sufficient force for its protection during the progress of the work, and will render such facilities as it may be able to provide, in connection with its other important public duties.

For the purpose of facilitating the transportation of supplies to Alexandria, and to points beyond, it has been found necessary to rebuild portions of the Orange and Alexandria and the Loudoun and Hampshire Railroads, and to lay a track from the Railroad depot to a point on the Potomac River, in this city.

TELEGRAPH.

Under an appropriation granted for that purpose at the last session of Congress, a Telegraph Bureau was established, and has been found of the greatest service in our military operations. Eight

hundred and fifty-seven miles of telegraphic line have been already built and put in operation, with an efficient corps of operators, and a large extension is now in process of construction.

THE LONG BRIDGE.

Congress, at its late session, made an appropriation for the re-construction of Long Bridge, across the Potomac, which, in its then dilapidated condition, was unsafe for military purposes. The work, which has been carried on without interruption to trade or tavel, is rapidly approaching completion, and, when finished, will be a substantial structure.

THE CAPITAL—PROPOSED CHANGE OF BOUNDARIES.

The geographical position of the Metropolis of the nation, menaced by the rebels, and required to be defended by thousands of our troops, induces me to suggest for consideration the propriety and expediency of a re-construction of the boundaries of the States of Delaware, Maryland and Virginia. Wisdom and true statesmanship would indicate that the seat of the National Government, for all time to come, should be placed beyond reasonable danger of seizure by enemies within, as well as from capture by foes from without. By agreement between the States named, such as was effected, for similar purposes, by Michigan and Ohio, and by Missouri and Iowa, their boundaries could be so changed as to render the capital more remote than at present from the influence of State Governments which have arrayed themselves in rebellion against the Federal authority. To this end, the limits of Virginia might be so altered as to make her boundaries consist of the Blue Ridge on the East and Pennsylvania on the North, leaving those on the South and West as at present. By this arrangement, two counties of Maryland (Alleghany and Washington) would be transferred to the jurisdiction of Virginia. All that portion of Virginia which lies between the Blue Ridge and Chesapeake Bay could then be added to Maryland, while that portion of the peninsular between the waters of the Chesapeake and the Atlantic, now jointly held by Maryland and Virginia, could be incorporated into the State of Delaware. A reference to the map will show that these are great natural boundaries, which, for all time to come, would serve to mark the limits of these States.

To make the protection of the capital complete, in consideration of the large accession of territory which Maryland would receive under the arrangement proposed, it would be necessary that that State should consent so to modify her Constitution as to limit the basis of her representation to her white population.

In this connection, it would be the part of wisdom to reannex to the District of Columbia that portion of its original limits which, by act of Congress, was retroceded to the State of Virginia.

OFFICE OF THE ILLINOIS CENTRAL R. R. Co.,
New York, Oct. 29, 1861.

HOLDERS of the stock of this Company, as registered upon the books of the company at the close of business on the 15th day of January, 1862, will be entitled to Canceled Bonds Scrip for five dollars upon each share of stock held by them deliverable on or after the 1st day of February next; and parties holding certificates are hereby notified to have the same registered in their own names on or before the said 15th day of January. 48

OFFICE OF THE ILLINOIS CENTRAL R. R. Co.,
New York, Oct. 29, 1861.

TWO additional coupons payable July 1, 1862, and Jan. 1, 1863, on the full paid stock of this Company, will be deliverable on presentation of certificates at this office, on or after the 1st day of December.

48 THOMAS E. WALKER, Treasurer.

OFFICE OF THE NEW YORK CENTRAL R. R. Co.,
Albany, November 1, 1861.

THE annual election for Directors of this Company, and for three Inspectors of the next election, will be held at the Office of the Company, in the Exchange, in the city of Albany, on the second Wednesday (the eleventh,) of December next. The poll will be opened at eleven o'clock in the forenoon, and will continue open for two hours thereafter. By order of the Board of Directors.

JOHN V. L. PRUYN,
Secretary *pro tem.*

SANFORD'S
MAMMOTH
OR
GLOBE
HEATERS.

The best stoves for RAILROAD DEPOTS and SHOPS, and all places where a great heat is required. They are very durable, and very economical of coal.

Beware of imitations that are inferior in strength and in other respects.

TESTIMONIALS.

HUDSON RIVER RAILROAD OFFICE, N. Y

This Company have now in use, over two hundred of Sanford's Mammoth Heaters, in Station Houses, Work Shops, and Engine Houses; we commenced using them in 1853, and some of the first stoves put up are still good and in use. We consider them the best Heaters now in use.

J. M. HEBARD, Supply Agent.

UNION FERRY COMPANY.

The Mammoth Heaters have been used by this Company in their waiting rooms at the several ferries and found to be very excellent stoves and more durable and valuable than any heretofore used. CYRUS P. SMITH, Managing Director.

HEAD QUARTERS, WESTERN DEPARTMENT,
St. Louis, Mo., August 23, 1861.

To Presidents and Superintendents of Railroads, Western Department, United States Army.

THE following is the basis established by the Government for the transportation of troops and supplies for the army:—

Per Passenger per mile (2) two cents for distances moved.

Equipments, munitions and supplies accompanying regiments, first class local rates, which will average about as follows:

30 miles or less			10	cents per	100 pounds.
50	"	"	15	"	"
100	"	"	25	"	"
150	"	"	40	"	"
200	"	"	50	"	"
300	"	"	75	"	"
350 to 400 miles not exceeding			90	"	"

For transportation of Horses in small lots, the following are the usual estimated weights of Railroad Companies:

Single animals		3,000	pounds.
2 animals		4,000	"
3	"	5,000	"
4 horses		6,500	"
5	"	8,000	"
6	"	9,000	"
7	"	10,000	"
8	"	11,001	"
9	"	12,000	"

Full car loads, 13 or 14 horses, usually charged 18,000 lbs. All other supplies forwarded by Freight Trains are charged local rates, according to classification of property which will usually average, on provisions and heavy freight, two to three cents per ton of 2,000 lbs. per mile.

Fast freights, immediate transportation, and precedence given to the Government in all cases.

All despatches required by the Government, to be furnished at the actual running cost.

E. H. CASTLE,
Supervisor Railroads, Western Department.

New York, Saturday, December 14, 1861.

Peterboro' and Shirley Railroad.

The Peterboro' and Shirley Railroad Company of New Hampshire was chartered July 8, 1846, with authority to construct a railroad from the Massachusetts State line, through New Ipswich, to Peterboro'. The road was placed under contract in 1849, and completed to the Souhegan, in November of the same year, and to Mason village, 9.36 miles, in 1850. From its opening it has been operated by the Fitchburg Railroad Company in connection with the Peterboro' and Shirley Railroad of Massachusetts—first at the stipulated sum of $10 per day, and subsequently as a part of the latter road, under lease to that company. The latter road being leased to the Fitchburg Railroad Company. Agreeably to an act passed in 1858-'9, the road, franchise, etc., was, on the 24th of March, 1860, sold to the Peterboro' and Shirley Railroad Company of Massachusetts for the sum of $67,700, the amount of its funded debt. The share capital was $143,456; floating debt $110,665; cost of road, including discount, interest, etc., $245,643. No reports were ever made of its operations. It yielded no return for the capital invested in it.

The Peterboro' and Shirley Railroad Company of Massachusetts was incorporated in 1845. The road was opened for public use from Groton to West Townsend, 12 miles, in 1848, and to the New Hampshire State line, 14 miles, in 1850. On the 1st of December, 1847, it was leased to the Fitchburg Railroad Company for 12 years (with the option of a further term of 13 years) the latter agreeing to keep the road in repair, and pay for its use 6 per cent. on its cost, and $300 in addition annually. On the 1st of July, 1857, this agreement was modified, and 7 per cent. was thereafter paid. On the 1st of January, 1860, the road was purchased by the Fitchburg Company for the sum of $132,666. The Peterboro' and Shirley Company has, therefore, no longer a corporate existence on their books, but is simply regarded as so much property added to the corporation, and is treated as such. The share capital authorized was $275,000, of which $263,700 was paid in. Funded debt $16,100. Cost of road, etc., $265,327. The Massachusetts Company have a claim against the New Hampshire portion of the road, consisting of bonds, notes and judgments secured by mortgage, the nominal value of which is $120,944.

The following is a statement of the cost, earnings, expenses, etc., from the opening of the road to the date of its purchase by the Fitchburg Company:

Years.	Cost of road, etc.	Rent from Fitchburg Co.	Operating expenses.	Net earnings.	Dividends. $	Dividends. p.c.

* Also 25 per cent. in stock.

It is understood that there is still a distinct organization kept up in New Hampshire, and that a board of directors is in existence, but no separate account is kept of the receipts and expenditures.

New York Central Railroad.

At the annual meeting of the Stockholders of this company, held at Albany on the 11th instant, the following Directors were chosen by a unanimous vote: Erastus Corning, of Albany; Dean Richmond, Buffalo; John H. Chedell, Auburn; Alonzo C. Paige, Schenectady; John V. L. Pruyn, Albany; Nathaniel Thayer, Boston; Livingston Spraker, Palatine Bridge; Jacob Gould, Rochester; Cornelius L. Tracy, Troy; Charles H. Russell, Richard M. Blatchford, New York; Hamilton White, Syracuse; Henry H. Martin, Albany.

For Inspectors of Election, GEORGE DEXTER, of Albany; RUFUS G. BEARDSLEE, of New York; and STEPHEN GROESBECK, of Albany, were chosen.

At a subsequent meeting of the Board the following appointments were made:

President—ERASTUS CORNING.

Vice-President—Dean Richmond.

Executive Committee—Messrs. Corning, Richmond, Chedell, Paige, Martin.

Committee on Accounts—Messrs. Spraker, Tracy, and Blatchford.

Buffalo, New York and Erie Railroad.

The earnings of this road for the year ending Sept. 30, 1861, in comparison with the corresponding period of the previous year was as follows:

	1860.	1861.
Passengers	$135,751 20	$128 552 22
Freight	422,718 22	439,142 55
Other sources	21,536 11	26,189 85
	$580 000 53	$593,884 62
Expenses	337,046 13	409,050 03
Net earnings	$242,954 40	$184,334 59
Increase in earnings		$13,884 09
Increase in expenses		72,003 90
Decrease in net earnings		$58,119 81

A contract has been entered into between this company and the Erie Railroad Company, by which the latter has the use of the former road (from Buffalo to Corning) for one year from the 1st of the present month. The Erie Company to run all its passenger and a large share of its freight trains into Buffalo instead of Dunkirk—the passenger trains to be run so as to make exactly the same time as the trains of the New York Central.

Cochecho Railroad.

This road is 28 miles in length, extending from Dover to Alton Bay. The company was chartered July 2, 1847. The construction of the road was commenced in the summer of 1848, and completed to Farrington 17½ miles, fn Sept., 1849, and to Alton Bay in Sept., 1851. The cost of the road, etc., September 30, 1850, was $421,715; on the 30th November, 1851, it was $661,623; and on the 30th November, 1860, it was $851,187. The construction account still remains open, and new entries are made to it from year to year, thereby rendering it very difficult to determine the exact amount paid, or fairly chargeable to the original cost of construction, in distinction from the ordinary operations of the road. The capital stock authorized was $50,000, of which $389,047 has been paid in, viz: common stock $211,297; preferred stock $177,790. The latter was authorized October 15, 1850, to the amount of $250,000, to bear 7 per cent. interest, until the earnings should be sufficient to pay 6 per cent. on the whole stock, when both classes were to be placed on an equality. On the 16th of October, 1850, the stockholders voted that the preferred stock should bear 8 per cent. interest till the road should earn 8 per cent. on the whole stock. No dividend has ever been paid upon either. The funded debt of the company consists of $420,853 first mortgage 6 per cent. bonds. These bonds become due in 1870, and there is now one year's interest ontstanding against them. It will be seen that the net receipts over expenditures have not been enough to pay the interest on these bonds, to say nothing about $20,483 of notes and other liabilities; so that it becomes perfectly apparent that this corporation must, sooner or later, fall into the hands of the bondholders. The following is a statement of the earnings, expenses, etc., from the date of its opening to the close of the fiscal year Nov. 30, 1860:

	Gross Earnings. Passengers.	Freight.	Mails, etc.	Total.	Operating expenses.	Net earnings.
	$	$	$	$	$	$
1850	*10,603	16,854	1,433	28,890	19,121	9,769

1858	17,232	23,199	4,278	44,709	27,646	17,063
1859	20,417	27,794	3,487	51,698	29,832	21,866
1860	20,737	27,280	2,029	50,046	24,520	25,526

* From Sept. 1, 1849 to Sept. 30, 1850. † From Oct. 1, 1850 to Dec. 1, 1851.

The average gross earnings have been $45,053; the average expenses, $24,026; and the average net earnings, $21,027. The amount required to pay the interest on all the bonds is $25,251. The amount paid on account of interest in 1860 was $27,649; in 1859, $9,523; in 1858, $22,899; in 1857, $23,677.

Philadelphia and Reading Railroad.

The coal tonnage of the Reading Railroad for the year ending November 30th, was 1,636,587, against 1,878,156 tons for the year ending Nov. 30, 1860—showing a loss of 241,569 tons. The aggregate business for the season is over 7,600,000 tons, and only about 270,000 less than last year to the same time.

Incidental	916 16
Wood	6,069 69
Total	$69,352 47
Operating expenses, same time	$75,375 24

Eaton and Hamilton Railroad.

The earnings of the Eaton and Hamilton Railroad for the ten months ending November 1, 1861, were:

Passengers	$42,406 22
Freight	54,002 13
Mail	2,620 61
Express	2,032 00
Rents	1,113 30
Total	$102,180 26
Operating expenses	50,772 11

Chicago and Rock Island Railroad.

The Directors of the Chicago and Rock Island Railroad Company, in connecting with their declaration of a dividend of three per cent. have made the following statement:

Cash in band of Treasurer		$322,309 50
Deducted three per cent. dividend		165,045 00
Totals		$157,264 50
Payments for the next six months, ending June 30, 1862:		
Due Jan. 1, 1862, interest on bonds	$48,895	
Due Feb. 1, 1862, rent Peoria V. Branch	62,500	
		111,395 00
Surplus		$45,869 50

Finances of Maryland.

The Comptroller of Maryland gives the following statement of the condition of the treasury, September 30, 1861:

Balance on hand as of September 30, 1860	$255,587 73
Receipts during the year	960,813 08
	$1,216,400 81
Disbursed during the year	1,046,356 49
Leaving a balance on September 30, 1861, of	$170,044 32
Probable demands upon the treasury for the current fiscal year, $1,000,000 00.	
Amount of Sinking Fund on the 30th of September, 1860	$4,823,229 35
Accumulated therefor during the year	231,189 02
Showing the actual Sinking Fund to be on the 1st September, 1861	$5,054,418 37
Remaining to the credit of the Fund September 30, 1861	40,919 62

Trade of the Port of Vera Cruz.

From the following Commercial review of the port of Vera Cruz, complied by Don F. de P. Serrano, by order of the British government, it appears that the value of the importations for the year 1860 were:—

Provisions	$1,854,757
Manufactures	7,467,566
Metals	233,924
Assorted merchandise	3,642,031
Total	$13,198,278

This amount of foreign merchandise is entered at the Custom House from the ports of:—

Liverpool	$4,540,331
Havre	2,514,149
Hamburg	1,922,433
New Orleans	1,546,573
Havana	967,073
Bordeaux	505,111
New York	488,701
Antwerp	200,041
Malaga and Genoa	241,253
Boston	116,789
Barcelona and Cadiz	330,019
Maracaibo	65,488
Pensacola	11,596
Newcastle	6,745
Mobile	1,976

The trade returns of the last year will be seen by the returns of the past five years, from which it appears that the value of the imports for the years were:—

1856	$17,720,582	1859	$14,027,920
1857	11,224,415	1860	13,198,278
1858	10,033,569		
Total	$66,204,764		

—Or an annual average of $13,240,953.

The exports for the same time were:—

Southampton	$5,345,225
New Orleans	943,336
New York	237,361
Havre	97,203
Bordeaux	86,994
Havana	77,983
Hamburg	59,823
Cadiz	15,100
Liverpool	9,912
Antwerp	7,496
[illegible]	3,200
Total	$6,883,633

The exports were for

1856	$8,942,988	1859	$5,864,310
1857	11,384,765	1860	6,883,633
1858	2,915,576		
Total	$35,963,272		

—Making the average $7,196,664 per annum, or little more than fifty per cent. of the value of the imports during the same time.

The exports of gold and silver were in

1856	$512,722	1859	$189,475
1857	261,347	1860	290,936
1858	117,161		
Total	$1,371,641		

Silver during the same years, $28,851,868.

The duties collected during the past year (1860) on imports amounted to $3,440,821; of this amount the national treasury did not receive the whole.

The pilotage, lighthouse, municipal, public improvements and tonnage dues are assigned. The "amortization of debt" is a payment heretofore made in Interior bonds. This impost has lately been changed for a new one in favor of the railroad enterprise.

The treasury receives little more than 50 per cent. of the duties collected at Vera Cruz, and nearly the whole of this is supposed to be absorbed by foreign and native holders of claims upon the national revenues.

Mineral Point Railroad.

The Mineral Point Railroad of Wisconsin has been sold under a decree of foreclosure to James C. Carter of New York for $75,000. On the reorganization of the company, Luther Beecher was elected President and George W. Cobb, Secretary and Superintendent. This road is about 32 miles in length, extending from Warren, Ills., a point on the Illinois Central Railroad, to Mineral Point, Wis. Its cost was over $1,000,000, of which the city of Mineral Point and vicinity, subscribed and paid in cash $120,000, besides issuing bonds for $30,000 more, to pay which an annual tax is levied.

Illinois Central Railroad.

A call of $5 per share has been made upon the scrip stock of this company for the purpose of paying off the construction disbursements of this year, and a small amount of interest, due Jan. 1st proximo. The notice is given elsewhere. We give also the company's statement for November. The receipts are less by $7,280 than those of November, 1860. For the past eleven months they exceed those of the corresponding period of 1860 by $169,357, and are now within $112,582 of the entire receipts from transportation for that year. The receipts for December, 1860, were $227,858.

New York Canals.

The Erie Canal closes on the largest business ever reported in its history—the revenues exceeding 1847 by $267,000.

Toll received fourth week in Nov., 1861	$45,820
Do. do. do. 1860	30,599
Increase	$15,221
Toll received Nov. 1861	$628,854
Do. do. 1860	411,559
Increase	$217,295
Toll received from May 1 to Dec. 1,'61	$3,902,700
Toll received from April 25 to Dec. 1, 1860	3,005,362
Total increase	$897,338

Rates of Foreign Exchange.

The rates of Foreign Exchange, as quoted by N. Brandt, Broker, No. 39 Exchange-place, for the steamer of December 14, were as follows:

London—60 days' sight	109⅜ per cent.
London—3 days' sight	110¼ "
Paris—60 days' sight, per dollar	5f. 15½c.
Paris—3 days' sight, per dollar	5f. 17½c.
Amsterdam—60 days' sight, per guilder	41⅜c.
Hamburg—60 days' sight, per marc banco	36⅜c.
Frankfort—60 days' sight, per florin	41⅝c.
Bremen—60 days' sight, per rix dollar	79⅜c.

Movement of Produce from Montreal.

The exports of produce from Montreal for three years, up to Nov. 28, have been as follows:

	Nov. 28,'61.	Nov. 29,'60.	Nov. 30,'59.
Flour, bbls.	651,945	276,967	101,806
Wheat, bush.	5,910,641	1,636,906	58,005
Corn, bush.	1,453,815	24,387	8,015
Oats, bush.	341,101	206,732	12,600
Oatmeal, bbls.	33,463	20,945	358
Peas, bush.	1,646,893	1,297,110	294,190
Butter, kegs	55,122	32,031	12,999

This statement shows that a large amount of grain grown in the Western States goes to Europe through the public works of Canada.

La Crosse and Milwaukee Railroad.

We learn that the La Crosse and Milwaukee Land Grant Bond case came up before Judge Miller on the 1st of December, both interests being represented. Judge Miller stated that the case had been differently presented to him from what it had been before, and more fully and elaborately argued; and that he should take till the next term of the Court to consider the case and prepare his decree. It was claimed on the part of the high numbers that the most of the Helfenstein bonds were issued and paid for by unlawful and corrupt considerations. It seems that the case has not yet been decided, and that any plan of compromise is altogether premature.

Springfield, Mt. Vernon and Pittsburg R. R.

We understand that this road—better known, perhaps, as the "Delaware Cut-off"—has been recently purchased by parties in the interest of the Cleveland, Columbus and Cincinnati Railroad Company, by which it is to be put in order and operated as a feeder to the main line. It is 50 miles in length, extending from Delaware to Springfield, connecting at the latter place with the Little Miami Railroad.

Chicago, Alton and St. Louis Railroad.

This road, under the energetic and judicious management of Mr. James Robb, has become one of the most important and popular thoroughfares of the West. Within the past eighteen months nearly half a million of dollars have been expended in permanent renewals. Every important bridge has been rebuilt (including two long bridges over the Kankakee and Sangamon rivers,) fourteen new locomotives have been added to the equipment of the road, and the earnings for the current year will reach nearly $1,100,000.—*Chic. Tribune.*

Report of the Secretary of the Treasury.

We have before us the report of Mr. Secretary Chase. The length of the document prevents our publishing it entire. We give therefore only the prominent portions of it. It deals with a subject of vital interest to the American people, and is to be commended for its clear exposition of the present condition and future prospects of the National Treasury. The estimates for the current fiscal year ending June 30, 1862, are as follows:

EXPENDITURES.

Expenditure for first quarter	$98,239,733
Estimated expenditure for second, third, and fourth quarters, according to acts of extra sesson	302,035,761
Additional appropriations now asked for	143,130,928
Total	$543,406,422

REVENUE.

Ordinary revenue from customs, etc	$36,609,731—	
Do. do. direct tax	20,000,000	
Borrowed already	197,242,588	
Balance of loans authorized	75,449,675	
Deficit	213,904,428—	$543,406,422

The estimated expenditures may be reduced somewhat by retrenchments in the various departments of service, and by the fact that certain portions of the public debt falling due may not be called for; so that it is probable that the amount to be raised to carry the government through the war will not exceed $200,000,000.

With regard to the wants of the government for 1862-3, no reliable estimate can be made. Assuming, however, that the war will continue, Mr. Chase estimates that the expenditures for

1862–3 will amount to $475,331,245, as follows:

For the civil list, including foreign intercourse and miscellaneous expenses other than on account of the public debt		$23,086,971 23
For the Interior Department (Indians and pensions)		4,102,962 96
For the War Department		360,150,986 61
For the Navy Department		45,164,994 18
For the public debt—		
Redemption	$2,883,364 11	
Interest on debt contracted before July 1, 1862	29,932,696 42	
Interest on debt to be contracted after 1st July, 1862	10,000,000 00—	42,816,330 53
Making an aggregate of estimated expenditures of		$475,331,245 51

On the other hand the estimated receipts are:

From customs, lands, & ordinary sources	$45,800,000 00	
From direct tax	20,000,000 00	
From internal duties, includ'g income tax	30,000,000 00—	
Making an aggregate of estimated receipts of		95,800,000 00
And leaving a balance to be provided for of		$379,531,245 51

The whole amount required from loans may, therefore, be thus stated:

For the fiscal year 1862, under existing laws	$75,449,675 00
For the fiscal year 1862, under laws to be enacted	200,000,000 00
For the fiscal year 1863, also under laws to be enacted	379,531,345 51
Making an aggregate of	$654,980,920 51

Upon the above basis the progress of the national debt will be as follows:

On the 1st of July, 1860, it was	$64,769,703
On the 1st of July, 1861, it was	90,867,828
On the 1st of July, 1862, it will be	517,372,802
On the 1st of July, 1863, it will be	897,372,802

The war, consequently, is costing us something like $450,000,000 annually. To meet these expenditures, loans will have to be the chief resort—the income from ordinary sources of revenue being estimated at only $56,809,731 for 1861–2, and $95,800,000 for 1862–3. Of these, customs and lands are estimated to produce $36,809,731 for the present, and $45,800,000 for the fiscal year ending June 30th, 1863. The direct and income tax will produce, it is estimated, $20,000,000 for the present year. To these sources a tax, or excise duty, is recommended upon stills, distilled liquors, tobacco, bank notes, carriages, legacies, paper evidence of debt, transfers of property, etc., etc., raising the $20,000,000 to $50,000,000 for 1862–3.

From the commencement of the fiscal year to the date of Mr. Chase's report, loans had been negotiated and notes issued to the amount of $197,242,588, as follows:

Two year notes	$14,019,035
Sixty day notes	12,877,750
Three year bonds bearing 7 3-10 per ct. int.	100,000,000
Twenty " " 6 " "	45,795,478
Demand Treasury notes	24,550,325
	$197,242,588

The twenty years six per cent. loan was for $50,000,000. Only the amount realized is given in the above table. It was sold at a rate that would yield 7 per cent. interest, or 89 32-100. No portion of this loan has been paid. It will not be called for, probably, before the last of January.

The treasury being abundantly supplied for the present, ample time can be taken in which to decide the policy to be adopted in the future. Mr. Chase is evidently disposed to close his arrangement with the Banks, and presents two alternatives for the government—that it should create a currency by an issue of Treasury notes, or by making the bonds of the government as basis of circulation under a system of Free Banking, applicable to any part of the country. For this purpose the Bills of Banks now in circulation, are to be retired by a tax upon them or other legal restrictions. In reference to this subject we copy the following from Mr. Chase's Report:

The first of these plans was partially adopted at the last session of Congress in the provision authorizing the Secretary to issue United States notes, payable in coin, to an amount not exceeding fifty millions of dollars. That provision may be so extended as to reach the average circulation of the country, while a moderate tax, gradually augmented, on bank notes, will relieve the national from the competition of local circulation. It has been already suggested that the substitution of national for a state currency, upon this plan, would be equivalent to a loan to the government without interest, except on the fund to be kept in coin, and without expense, except the cost of preparation, issue, and redemption; while the people would gain the additional advantage of a uniform currency and relief from a considerable burden in the form of interest on debt. These advantages are, doubtless, considerable; and if a scheme can be devised by which such a circulation will be certainly and strictly confined to the real needs of the people, and kept constantly equivalent to specie by prompt and certain redemption in coin, it will hardly fail of legislative sanction.

The plan, however, is not without serious inconveniences and hazards. The temptation, especially great in times of pressure and danger, to issue notes without adequate provision for redemption; the ever present liability to be called on for redemption beyond means, however carefully provided and managed; the hazard of panics, precipitating demands for coin, concentrated on a few points and a single fund; the risk of a depreciated, depreciating, and finally worthless paper money; the immeasurable evils of dishonored public faith and national bankruptcy; all these are possible consequences of the adoption of a system of government circulation. It may be said, and perhaps truly, that they are less deplorable than those of an irredeemable bank circulation. Without entering into that comparison, the Secretary contents himself with observing that, in his judgment, these possible disasters, so far outweigh the probable benefits of the plan that he feels himself constrained to forbear recommending its adoption.

The second plan suggested remains for examination. Its principal features are, (1st) a circulation of notes bearing a common impression and authenticated by a common authority; (2d) the redemption of these notes by the associations and institutions to which they may be delivered for issue; and (3d) the security of that redemption by the pledge of United States stocks, and an adequate provision of specie.

In this plan the people, in their ordinary business, would find the advantages of uniformity in currency; of uniformity in security; of effectual safeguard, if effectual safeguard is possible, against depreciation; and of protection from losses in discounts and exchanges; while in the operations of the government the people would find the further advantage of a large demand for government securities, of increased facilities for obtaining the loans required by the war, and of some alleviation of the burdens on industry through a diminution in the rate of interest, or a participation in the profit of circulation, without risking the perils of a great monopoly.

A further and important advantage to the people may be reasonably expected in the increased security of the Union, springing from the common interest in its preservation, created by the distribution of its stocks to associations throughout the country, as the basis of their circulation.

The Secretary entertains the opinion that if a credit circulation in any form be desirable, it is most desirable in this. The notes thus issued and secured would, in his judgment, form the safest currency which this country has ever enjoyed; while their receivability for all government dues, except customs, would make them, wherever payable, of equal value, as a currency, in every part of the Union. The large amount of specie now in the United States reaching a total of not less than two hundred and seventy-five millions of dollars, will easily support payments of duties in coin, while these payments and ordinary demands will aid in retaining this specie in the country at a solid basis both of circulation and loans.

Mr. Chase's arguments are nothing more than recommendations to Congress. As the wants of government are fully supplied for some time to come, by loans already negotiated, there will be ample season for deliberation. We can see no good reason why Mr. Chase should terminate his relations with the Banks, which, according to his own admission, have worked admirably, and supplied the government with all the money needed, and without creating any disturbance in business circles. It strikes us that it would have been better to have held on to an arrangement that worked well, rather than to resort to new expedients, the success of which is at least, problematical. Why not let "well enough" alone? There has been no lack of money wherewith to carry on the war. There need be none, with a discrete management of our affairs. The country was never before so rich or strong. The effect of the expenditures going on are creating an inflation quite fast enough. We do not believe Congress will sanction any proposition to have government supply a currency for the country, either by an issue of Treasury notes, or by making government securities a basis for Banking. We think that other important changes will be made in the recommendations of Mr. Chase, by increasing largely the local and direct taxes. England raises $350,000,000 by taxes and imposts, when we propose to raise only some $90,000,000. The amount required for the war can undoubtedly be readily had in loans, but these should be only availed of as a last resort.

RAILROAD SHARE LIST, including Mileage, Rolling Stock, etc., etc.

An *asterick* (*) occurring in the column headed "Rolling-Stock," signifies that the cost is included in that of "Railroad and Appurtenances." A *dash* (—) signifies "nil." Running *dots* (.....) signify "not ascertained." Land-Grant Railroads are in *"italics."*

American Railroad Journal.

Saturday, December 14, 1861.

Share and Money Market.

The Share Market the past week has been a very excited one, with large fluctuations. For the first part of the week it was dull, with a declining tendency. On Monday it reacted with a good deal of vigor, and again fell off rapidly under the receipt of the foreign news by the *Hansa*. The capture of Messrs. Slidell and Mason appears to have created much excitment in Liverpool and London, and caused a fall in consols of a half per cent., and a much larger decline in American securities. We do not think there is much apprehension on this side that the affair will lead to any permanent difficulties between the two countries, but it is natural that the Stock Market here, should be even much more largely affected than in England. In other respects the condition of affairs is favorable. Money continues to be very abundant. Exchange is dull with but little doing. The closing of the canals, impairing an ability to export breadstuffs, may have a tendency before long to put up rates.

The Cleveland and Pittsburg Railroad Company are prepared to pay the interest now due on all their mortgage bonds. The coupons may be presented at the office of the company in Cleveland, or at No. 25 William Street, New York, to H. C. Kingsley.

The Chicago and Rock Island Railroad Company have declared a dividend of three per cent. on the capital stock of the company, payable at their office in New York, on the 20th of December, instant.

Public notice is given by the Treasurer of the State of Illinois that he will, on and after the first Monday of January, 1862, until the 6th day of February, 1862, be ready at the American Exchange Bank, New York, to pay the interest maturing on the first Monday of January, 1862, on the public debt of the State of Illinois. The interest then due and not called for prior to the 6th day of February will hereafter be paid only at the office of the Treasurer of the State of Illinois, in Springfield, Illinois. Holders of Illinois and Michigan Canal bonds, where coupons are exhausted, are required to present the bonds.

On the 23d ult., the Little Miami Railroad Company declared a dividend of four per cent., payable on the 2d inst., at the office of the Treasurer in Cincinnati. By order of the Executive Committee Eastern stockholders may receive the above dividend in New York funds, on and after the 24th December. On their request, to that effect, addressed to the Treasurer, a check will be forwarded by mail or otherwise as may be desired.

The Stocks of the State of New York, 6 per cents., due the 1st of January, proximo, are cashed at the New York State Bank, Albany, in New York Exchange, at par, and accrued interest from Oct. 1.

John B. Jervis, Esq., has been appointed General Superintendent of the Pittsburg, Fort Wayne and Chicago Railroad.

Judgment has been rendered in the Montreal Superior Court, by Judge Monk, in the action, "Morrison agt. Grand Trunk Railway Company." The *Pilot* says: "The nomination of a receiver to the road was refused, as not warranted by law, nor proved to be necessary as a remedy to preferential creditors." The *Witness* says: "The appointment of a *sequestre* or receiver, to work the railway and receive its revenues, was refused, the Hon. Judge holding that the law of Lower Canada does not saction the sequestration of the property of a corporation, incorporated by act of Parliament. Notes of the judgment were handed by the Judge to Counsel, and the decision will doubtless be reported at length."

The authorities of Alleghany and Pittsburg, Pennsylvania, have at last settled with their creditors. They have agreed that the old bonds be exchanged for new ones, to bear 4 per cent. interest, the arrearages now due to be thrown off. The new bonds are to be irredeemable, except by a sinking fund of $4,000 annually. The City Councils have passed ordinances ratifying the settlement.

The Milwaukee and Prairie du Chien Railway Company intends building, next spring, a large grain elevator, with a storage capacity of 250,000 to 300,000 bushels. This is rendered necessary by the largely increasing business of the road.

Cleveland and Pittsburg Railroad.

The fiscal year of this company closed on the 30th ult. The gross traffic is understood to be, in round numbers $1,120,000. The operating expenses during the same time have been $620,000; rent, $85,000; current interest $225,000; arrearages of interest paid $100,000—leaving a surplus of $90,000. The first three months of the past fiscal year, commencing with December last, were adversely affected by the political troubles of the country, yielding only $191,000. For the present year they are expected to yield $300,000—securing a result for the year of $1,200,000. The estimated expenses for 1862 are $660,000; rent, $85,000; current interest $293,000—leaving a surplus of $162,000, or over 4 per cent. on a capital stock of $3,845,000. The following will show the earnings and per centage of expenses during the past in comparison with those of the four proceeding years:

	Gross earnings.	Percentage of expenses, repairs, & new work.
Year ending Nov. 30, 1857	$ 740,000	57
" Nov. 30, 1858	772,000	60
" Nov. 30, 1859	906,000	53
" Nov. 30, 1860	1,021,000	66
" Nov. 30, 1861	1,120,000	56

Colorado Territory.

According to an act of the Territorial Legislature, approved by Governor Gilpin on the 6th November, 1861, the territory is to be divided into seventeen counties, the names of which and the capitals thereof are as follows:

Counties.	*County Seats.*
Castilla	San Miguel.
Guadaloupe	Guadaloupe.
Hueropano	Autubes.
Pueblo	Pueblo.
Fremont	Canon City.
El Paso	Colorado City.
Douglas	Frankstown.
Arapahoe	Denver City.
Weld	St. Vrain.
Larimer	La Porte.
Boulder	Boulder.
Jefferson	Golden City.
Clear Creek	Idaho.
Gilpin	Central City.
Park	Tanyall City.
Lake	Oro City.
Summit	Parksville.

The Territorial Capital is Colorado City, near Pikes Peak.

Railroad Earnings--Weekly.

The earnings of the St. Louis, Alton and Chicago Railroad for the 4th week in Nov., were:

	1861.	1860.
Passengers	$4,753 80	$4,640 70
Freight	11,123 48	7,326 15
Sundries	815 33	785 84
Total	$16,692 61	$12,752 69
Increase	3,939 92	
Total this month to date	$83,184 68	$74,205 16
Total since Jan., 1st	923,126 19	874,158 25

The earnings of the Michigan Central Railroad, for the 4th week in Nov., 1861, were $73,417 86
Do. 1860 49,326 35
Increase $24,091 51

The earnings of the Galena and Chicago Railroad the 1st week in Dec., 1861, were $25,117
Do., 1860 25,537
Decrease $420

The traffic of the Great Western Railway of Canada for the week ending Dec. 6, 1861, was as follows:

Passenger	$16,100 68
Freight and live stock	33,770 14
Mails and sundries	1,599 39
Total	$51,470 21
Corresponding week of last year	40,004 38
Increase	$11,465 83

The receipts of the Grand Trunk Railway of Canada for the week ending Nov. 30, were $91,994 58
Corresponding week, 1860 75,033 14
Increase in 1861 $16,961 44
Total traffic from July 1st, 1861 $1,598,860 84
Corresponding period previous year 1,525,655 45
Increase $73,205 39

The Cleveland and Toledo Railroad earned the 1st week in December, 1861 $22,840
Do., 1860 19,787
Increase $3,053

The Rock Island Railroad earned the 1st week in December, 1861 $22,434
Do., 1860 19,422
Increase $3,012

Railroad Earnings--Monthly.

The earnings of the New York Central Railroad for October and November, 1860 and 1861, were as follows:

	1860.	1861.	Increase.
October	$811,457 62	$926,980 41	$115,522 79
November	730,736 93	951,120 86	220,383 93
Total	$1,542,194 55	$1,878,101 27	$335,906 72

The earnings for November are partly estimated. They are the largest earnings of the road in any one month.

The statement of the Illinois Central Railroad for November is as follows:

Land Department.

Acres Construction Lands sold	6,752.20 for	$94,910 04
Acres Interest Fund L'ds sold	289.56 "	3,090 24
Acres Free Lands sold	2,263.01 "	33,633 08
Total sales during the month	9,304.85 for	$131,633 36
To which add Town Lot sales		499 70
Total of all		$132,133 06
Acres land sold since Jan'y 1, 1861	94,962.19 for	$1,432,683 67
Acres sold prev'sly (net sales)	1,245,930.80 for	17,448,534 52
Total	1,440,892.99 for	18,881,218 19
Construction bonds canceled previous to November 30		$2,011,000 00
Collections in November on Construction bond account		54,500 00
Collection in October for free land and interest account		34,168 77
Total collections in Nov. 31, 1861		2,099,668 77

Traffic Department.

Receipts from Passengers	$72,513 90
" Freight	149,051 75
" Mails	6,358 34
" Rent of road	5,333 33
" Other sources	2,626 50
Total receipts for November, 1861	$235,883 82
Do. do. 1860	243,163 64
Total receipts since Jan'y 1, 1861	$2,609,008 60
Total receipts in corresponding period of 1860	2,439,652 72
Increase	$169,355 88

Original land grant, 2,595,000 acres; railway, 706 miles of main track, and 93 miles of sidings, 113 engines, 2,456 cars. Funded debt, $15,461,740.

	Traffic.	Working Expenses.	Balance.
1856	$2,434,587.59	$1,444,546.19	$990,041.40
1857	2,293,964.57	1,791,231.14	502,733.43
1858	1,976,588.53	1,419,954.80	556,623.73
1859	2,114,448.98	1,489,579.52	624,869.46
1860	2,721,590.94	1,693,403.30	1,028,187.64

The Chicago and Northwestern Railroad earned in November as follows:

Passengers	$31,547 18
Freight	47,109 49
Express	807 03
Mail	1,695 83
Total	$81,159 53
Corresponding month, 1860	74,331 29
Increase	$6,828 24

The earnings of the Michigan Central Railroad for November, 1861, were $242,089 13
Do., 1860. 196,182 27
Increase $45,906 86

The receipts of the New York and Harlem Railroad for November, 1860, were $97,379 05
November, 1861 91,526 85
Decrease $5,852 20

The earnings of the Buffalo, New York and Erie Railroad for November were:

	1861.	1860.
Passengers	$12,408 85	$10,079 40
Freight	64,144 56	47,957 67
Other sources	2,500 00	2,659 08
Total	$79,053 41	$60,695 15
Decrease		$18,358 26

The November earnings of the Chicago, Burlington and Quincy Railroad were:

	1860.	1861.
Freight	$78.900 91	$123,652 56
Passengers	30,046 56	21,861 88
Mails and miscellan's.	2,528 64	3,826 34
Total	$111,476 11	$149,340 78

Between Chicago and Burlington—210 miles:

	1860.	1861.
Freight	$92,484 53	$146,710 05
Passengers	35,722 91	25,719 85
Mails and miscellan's.	2,899 65	4,190 84
Total	$131,107 09	$176,620 74

Between Galesburg and Quincy—100 miles:

	1860.	1861.
Freight	$20,437 39	$21,564 95
Passengers	10,648 07	6,564 19
Mails and miscellan's.	2,309 68	848 83
Total	$3,395 14	$28,977 97

Aggregate for 310 miles:

	1860.	1861.
Freight	$112,921 92	$168,275 00
Passengers	46,370 98	32,284 04
Mails and miscellan's.	5,209 33	5,039 67
Total	$164,502 23	$205,598 71
Increase		$41,096 48

The November earnings of the La Crosse and Milwaukee Railroad Company were $116,935.

British Iron Trade with the U. S.

The Board of Trade returns continue to afford painful evidence of the disastrous effects of the American war upon the commerce of this country, Our exports for the month of September last, as compared with those for the corresponding period of last year, show a falling off of no less than £2,426,248. The decrease in cotton manufactures is £1,457,932; in cotton yarn, £227,904; in linen manufactures, £206,838; in linen yarn, £68,661. Woollen manufacturers also exhibit a falling off, but in woollen worsted yarn, the figures show an improvement to the extent of about £50,000. The value of steam and other machinery exported presents little change, while all the chief items under the head "metals" show a serious decrease. Silk manufactures and yarn also appear on the unfavorable side. For the nine months, the decrease in the value of our exports is £7,929,014.

We subjoin a statement of the total declared value of the exports of British and Irish produce and manufactures during the month and nine months in the last two years:

	For the month.	For nine months.
1860	£13,646,454	£101,724,346
1861	11,220,206	93,795,332

The hardware and cutlery trades have been amongst the chief sufferers from the falling-off of the American trade, the value of the exports of last month showing a decline, as compared with last year, from £388,423, to £275,445, notwithstanding an increased exportation to France, the Hanse Towns, Anstralia, South Africa and Brazil. In plate and plated wares, jewellery and watches, however, there was an increase, the value being £49,761, against £44,884, in the corresponding period of last year. The earthenware and glass trades have suffered still more severely than those

of hardwares and cutlery, the exports of the former amounting to only £92,459, against £161,957, though the shipments to India, Australia, and Brazil show an increase, and those of the latter declining from £56,782, to £47,193, the decrease extending to all except plate glass. Machinery, in which little or no business is done on American account, continued to flourish, the total value of the exports being £350,422, against £342,708 in the corresponding period of last year; but steam engines were not in so much demand, except in India, and there was a diminution of the exports of other machines to Russia, Spain, and the Hanse Towns.

Iron has been exported as follows:

	Month ending 30th Sept.		Nine mos. ended 30th Sept.

The falling off in the exports of pig iron was due entirely to the smallness of the orders from the United States, the value of the shipments to that country being only £380, though in former years they were our best customers. The exports to other countries increased, France taking three times the quantity exported to that country in the corresponding period of last year. In bar iron the decrease extended to the exports to Holland, Turkey, India, Australia, and Canada; whilst the shipments of railway iron were diminished not only by the smallness of the exports to the United States, but also by the entire absence of orders from Cuba, and the falling off of the demand from Russia, Sweden, and Spain. The decline in cast iron was general, except in the exports to Egypt and Brazil. The exports of wrought iron to Russia and Canada fell off nearly one-half and to the United States seven-eighths; but to all other countries they increased. In the copper and yellow metal trades, which have hitherto been active, the decline was general. There was an increased export of tin plates to India and Australia; but the value of the shipments to the United States fell from £99,349, to £18,623, as compared with the corresponding month of last year.—*London Colliery Guardian, November 2.*

Extract from the Report of the Secretary of the Navy.

When the vessels now building and purchased, of every class, are armed, equipped, and ready for service, the condition of the navy of the United States will be as follows:

OLD NAVY.

Num. of Vessels.	Guns.	Tons.
6 Ships-of-line	504	16,094
7 Frigates	350	12,104
17 Sloops	342	16,031
2 Brigs	12	539
3 Store-ships	7	342
6 Receiv. ships, etc.	106	6,340
6 Screw frigates	222	21,460
6 1st cl. screw-sl'ps	109	11,953

	256	41,448

Minnesota and Pacific Railroad.

The Minnesota and Pacific Railroad which passes from Wisconsin through St. Cloud to the Red River of the North, is graded up until within twelve miles of this point, and but for the war would have been finished and cars running by Jan. 63. That most important part, from St. Paul to St. Anthony will be running by Jan. 62. On our first page is an account of its first train and as the grading is done, the ties and rails there, this iron link between the navigable waters above and below St. Anthony's Falls will quickly be made.

Last winter a railroad was chartered from the head of Lake Superior to the Mississippi, leaving it to the company building, to select the point at which it shall reach the river. The Hudson Bay trade and the immense produce export from this part will doubtless bring it to St. Cloud. Much of our wheat now goes to Superior via Chicago and Milwaukee, traversing some two thousand miles when the distance is, 150.—*St. Cloud Democrat.*

Foreign Dry Goods Trade.

Imports of Foreign Dry Goods at New York for the month of November.

	1859.	1860.	1861.
Entered for consumption:

(From the Journal of the Franklin Institute.)

On the Erie Experiments on Steam Expansion by U. S. Naval Engineers.

By Samuel McElroy, C. E.

(Continued from p. 855.)

It has been claimed, and demonstrated by experiment in important cases, that the proportions and conditions of a boiler being constant, there can be but one rate of combustion in correspondence with its *maximum useful effect*. This is a recognized law of practice, and is true of either a quick or slow combustion boiler. Farther than this, it has been claimed, that the *useful effect* of a boiler is modified by the manner in which its steam supply is taken, whether more or less rapidly, and in approximation to a certain rate of supply. But the course of experiments under examination exercises a supreme contempt for these distinctions. Not only is the rate of combustion varied, as we have stated, but the rate of steam supply, in equal times, varies *six hundred* per cent.! The performance of these boilers, judged by the results tabulated, does not reach, by at least 25 per cent. of evaporation, the standard of reasonable expectation, and in no two experiments is the evaporation alike per pound of coal. When we are told that special care was exercised in all the experiments to keep the throttle open, although the Board claims to have demonstrated certain singular conclusions about throttling, we can readily understand with what ingenuity these boilers were themselves throttled out of their vitality.

The doctrine of *maximum useful effect*, which defines the load and the velocity of an engine is also placed at issue here. Theory has been confirmed, in repeated instances, as to this law, which has engaged the attention of our most profound students. A certain standard of proportion exists between the leading features of an engine and the amount of labor it will best perform, and no violence can be done any of its conditions of service without detrimental results.

The steamer *Michigan*, as a case in point, was built for Lake service, with a certain proportion of machinery to her displacement and speed. From notes of her performance, we find that with a mean piston pressure of 18.44 pounds per square inch, she makes 18⅓ revolutions per minute, and 10.4 statute miles per hour. As a side-wheel steamer, with two engines and two boilers, these are her ordinary conditions of work. But, in experimenting with her, all these relative proportions are violated. One engine is disconnected, and both boilers are kept under fire to supply the other, although with the same initial pressure the revolutions are varied from 20.6 to 11.7, and the mean pressure (a representative of the load) is changed from 29.8 to 8.8 pounds per square inch. And yet the Board seems to be under the impression that all these changes are compatible with a common standard of useful effect, and practically denies a most important principle of mechanical action. In this respect we are not prepared to concede its infallibility.

In connexion with this objection a question of fact arises, as to the literal accuracy of the report. The Board attempted to carry out a mistaken principle of trial by regulating the resistances of the wheels, so as to accommodate a uniform initial pressure, and it succeeded very completely in producing a variously diseased and incongruous action of the engine; but it is incorrect in asserting that it "was not in any way changed in condition" of motion during any experiment, inasmuch as the waves were effected by the wind, and the dip of the floats varied as the vessel alternately grounded or floated, and the floats themselves were, from time to time, broken by ice. These resistances, by consequence, could not have been uniform during any experiment.

A glance at the tabular synopsis sufficiently indicates the effects of these variable resistances. The results in action are much more diversified than the changes in rate of expansion, and are strikingly inconsistent. A mean pressure of 8.8 pounds produces 14.1 revolutions, while that of 13.6 pounds gives only 11.17 turns. We increase the pressure 60 per cent., and it reduces the speed 21 per cent. A range of 603 per cent. has been noticed in the quantity of steam used in a given time; there is a range of 240 per cent. in the mean pressures; a variation of 10 per cent. in the vacuum; of 84 per cent. in speed; of 390 per cent. in combustion; of 50 per cent. in coal per H. P.; of 22 per cent. in evaporation.

And the argument of the report is embarrassing in these conflicting cases. There stand the tables of the new law. Whatever opposes their "data" is "fallacious," and it is just as incontrovertibly true, that an increase of pressure will reduce speed in all engines not steam-jacketed, as it is that it is cheaper to follow full stroke than to cut off at one-sixth.

On page 13, the report states that "during all the experiments the throttle valve was kept wide open." On pp. 36 and 37, we have the argument, already quoted, that for anything below a steam travel of seven-tenths, it is "immeasurably" better to throttle than to use the main valve.

Here the Board, not having experimented, passes into the dangerous region of "fallacious theories," and jeopardizes its infallibility. Engineers are under the impression that the moment of final pressure determines the amount of steam expended during an engine stroke. And it is a simple mechanical impossibility that the same *mean pressure* in connexion with a given *final pressure* can be produced, where the throttle is used instead of the main valve cut-off. All experience goes to confirm the very plain principle that throttling reduces the initial range of pressure, and consequently the mean pressure, which determines the amount of work done, while the final pressure, which measures the cost of the work, remains constant in either method; and there is therefore a loss of power equivalent, at least, to such reduction of pressure. An assertion of opinion, like that quoted, coming from such a source, cannot but be regarded with suprise. Not only is it incorrect as to economy of fuel, but in all well arranged engines, it is as easy to modify the cut-off gear as to change the throttle. There may be an exception in the case of those horribly proportioned guillotines with which the Navy steamers have been afflicted of late years; which have 6 inches clearance and 54 inches diameter for 32 inches stroke; which spin around sixty-five times a minute to achieve eight knots an hour; and of which an "assistant" stands in mortal fear, from the time they are "hooked on" until they happily break down, and are laid up for repairs.

It was to be presumed that the Board would trace their special theory through a regular series of demonstrations to a final conclusion in their method of experiment. But our table shows that no order of this kind was observed in the variations of expansion, as its report also shows that it argues on certain grades, which it did not test. Experiment No. 7 in date, as the greatest in grade, immediately succeeds that of the greatest steam travel, and the relative order of the series, in this respect, is Nos. 6, 5, 4, 1, 3, 2, 7, as distinguished from their dates. If the results obtained developed a regular series, we might be content to accept them, no matter in what order of precedence, but these are as irregular as their order of trial. The consumption of coal per H. P. per hour is thus reported: 3.96 lbs. for ¼ cut-off, 4.19 lbs. for ⅜ths, 4.23 lbs. for $\frac{3}{10}$ths, 4.58 lbs. for ½th. 4.87 lbs. for $\frac{7}{10}$ths, 5.53 lbs. for ⅞ths, and 6.08 lbs. for $\frac{9}{10}$ths. Such a result as this, taken in connexion with the fact that the last trial shows about three times the combustion per H. P. due to some engines, is a painful commentary on the method of experiment adopted.

We may also observe here, that a number of experiments were made at Erie, which are not given in the report. The Board convened Nov. 19th, and the first result tabulated bears date Dec. 30th, although notes of experiments on the 1st, 5th, 8th, and 10th are extant. Of these the Board remarks, that "it is useless to add any others (to those given) which *uncontrollable variations* in the conditions during their progress could lay open to a doubt," although they are said to have shown less effect from the measures of expansion. The inference to be drawn from this omission, on these grounds, is by no means an argument in endorsement of the report, nor does it sustain the general *modus operandi*. Details of experiments are not only suppressed, but whole experiments themselves, probably equal in number to those given, are also suppressed. The witnesses do not tell the "whole truth."

Nor does the text of the report accord with the "data" tabulated, in an important matter of fact like the following:

On page 12, we are told that "Each experiment lasted 72 consecutive hours, during which the engine was neither stopped, nor slowed down, nor in any way *changed in condition*.. In commencing an experiment the engine was operated for *several hours* to adjust it *to the normal conditions* required to be *uniformly* maintained during that experiment, and to bring the fires to steady action." But when we turn to the tables which form the basis of the text, we find that while Experiment No. 1 terminated its 72 hours run at 4 A. M., Jan. 2d, Experiment No. 2 commenced at precisely the same moment. We also find that there was but two hours interval between Experiments Nos. 2 and 3, and 5 and 6. In a simple matter of fact, then, three experiments out of the seven are open to discussion, as to the statements of the text.

But this is not the most serious point of this objection. It will be noticed that the combustion of coal per square foot of grate is 6.28 lbs. for No. 1, and 3.79 lbs. for No. 2; that the evaporation varies from 8.33 lbs. per lb. of coal to 8.09; that the mean cylinder pressure (which reveals a varied resistance) changes from 19.9 lbs. to 13.6, and the cut-off from $\frac{2}{10}$ths to ⅓th, or as 18 to 10, and the revolutions from 13.69 to 11.77. Now we would like to be informed by what medium, unrevealed to ordinary philosophers, this Board was enabled to change the combustion of the boilers 51 per cent. in rate, at the tick of the second-hand which changed Experiment No. 1 to No. 2, and by what process they defined all the other changes of resistances and methods of action, which clearly distinguish these experiments. Their special claim of accuracy cannot meet the argument of this self-evident tabular conviction.

The Board suppresses a number of experiments on account of "uncontrollable variations." In those which they present we find that—

There is a variation in the boiler pressure from 19.5 to 22 lbs. per square inch.

There is a variation in the vacuum from 24.1 to 25.5 inches.

There is a variation in the evaporation per lb. of coal from 7.14 to 8.71 lbs. of water.

There is a variation in the coal used, three kinds being reported.

In matters of simple management like these, the discrepancies are inexcusable, and tend to complicate the results needlessly. Especially is it strange that different kinds of coal should be admitted under any circumstances, the variety used for the greatest steam travel differing from that in any other experiment.

When we examine another very important detail of method adopted in these experiments, viz: as to the measurement of coal consumed, we find it also inaccurate and unsatisfactory. This the printed explanation makes sufficiently plain; for when we are told that the notes for each experiment were commenced "with average fires" in the boilers, and the fires were made at the close, "the same as at the beginning, *as nearly as could be estimated*," we understand at once that the Board only weighed what coal was used during the actual term of any trial, and *guessed* at the state of the boilers at its commencement and end. The precise quantity of coal which produced the recorded number of engine strokes was not *weighed*. For that essential particular, the Board asks us to accept its estimate, and this admission is in itself fatal to any claim of accuracy otherwise presented. Anybody can guess, but it belongs to experimenting engineers to measure and rigidly determine every detail, and especially so impor-

tant a detail as the coal account, on which all the calculations of results depend. So long as it is easy to determine this account in experiments of this class, beyond any question, we are not prepared to accept any explanation or any apology for its omission. Those who have had frequent occasion to probe these processes, are not to be told that the absolute state of a boiler fire can be determined by its appearance, or its level, or the steam gauge; for we know by the results of frequent analyses, that these features may be identical where there is a difference of fifty per cent. in absolute efficiency. Nor can we yield the professional rule in this case, which refuses to accept opinions and estimates where actual quantities are at issue. With the coal account in this state for each experiment, it is impossible for this Board to claim that it has *demonstrated* anything. In entering voluntarily the field of estimate and conjecture, it submits to the "theoretical considerations" it claims to have overthrown.

Farther, in what way are we to reconcile this assumed process with the 1st and 2d experiments? At the close of the latter, the "average fires" represent a combustion of 3.79 lbs. per square foot of grate, while at its commencement, which also marked the close of the 1st experiment, the rate then represented is 6.28 lbs. per square foot. There can be but one conclusion in a case of this kind, and it is not very creditable to the discretion of this Board in matters of judgment and opinion. Not only is the accuracy of the coal account involved here, but the per centage of ashes, the boiler evaporation, the horse-power, and the resistances.

In experiment No. 5, at $\frac{7}{10}$ths cut-off, the coal account is credited with 18.53 per cent. of refuse, while No. 7, $\frac{4}{45}$ths cut-off, is credited with but 6.99 per cent., which is not exceeded in any other experiment, none of them agreeing as to this per centage. In No. 5, a different variety of coal was used from Nos. 1, 2, 4, and 7. But is it to be inferred from all these discrepancies that the coal varied so much in quality, or that the system of measurement was defective in accuracy? Under such circumstances, which is the most likely to be true? Two important conditions of the measurement were guessed at; the third only was determined.

We are disposed to concede to this report the merit of deep and abstruse argument. After looking over it very carefully, when it first came to hand, in some bewilderment as to what it really did assert, we endeavored to find some one place where a clear and unmistakable conclusion was presented, and failed in discovering anything more definite than the quotation with which we commenced this paper. But in those brief sentences, strange contradictions occur. They begin by admitting a gain with two-fifths cut-off; they assert a loss at one-quarter, a loss which we might assume to be referred to full travel, if one-sixth was not immediately presented as such measure. And yet, a page or two back, we are told that if "the proper corrections could be made for the difference of cylinder temperature due to the different measures of expansion, it would doubtless be found that the economical result obtained when cutting off at seven tenths, is not exceeded when cutting off at any less fraction."

It is not an easy matter, therefore, to pass from general questions of principle and method to a discussion of absolute results, so many different ones having been obtained. The general argument of the report is against the use of expansion at all. The summary of all the allowances, assumptions, and equivalents in table No. 2, ranges the "economic result in net horse-power" with $\frac{4}{45}$, $\frac{1}{6}$, $\frac{1}{12}$, $\frac{1}{4}$, $\frac{2}{10}$, $\frac{7}{10}$, $\frac{4}{5}$ths cut-off in order of precedence, while the "economic power" in "pounds of steam per horse power per hour," ranks them $\frac{4}{5}$, $\frac{7}{10}$, $\frac{2}{10}$, $\frac{1}{4}$, $\frac{1}{12}$, $\frac{1}{6}$, $\frac{4}{45}$ths cut-off, which exactly reverses the order. Precisely what conclusion the Board really reached does not appear in the report; while its argument rejects expansion, its tables confirm it in part, in instances which contradict its explicit assertions.

In table No. 1, the order of results for the "pounds of combustible" per horse-power, is $\frac{1}{4}$, $\frac{4}{5}$, $\frac{7}{10}$, $\frac{2}{10}$, $\frac{1}{6}$, $\frac{1}{12}$, $\frac{4}{45}$ths cut-off.

Passing from this troublesome triangular tabular duel, we may take up the assertion, that "the economy of cutting off at one-sixth or four-forty-fifths is considerable less than with steam used absolutely without expansion," for the purpose of tracing the argument of the report.

Assuming that the "data" giving in our synopsis of table No. 1 were rigidly and accurately obtained, we cannot compare the results of one-sixth cut-off with full steam travel, because the latter was not tested; but taking eleven-twelfths as an approximation, the horse-power per pound of coal is in favor of the former as 5.53 to 4.58, although there is a loss of .9 inch in vacuum.

In this case, the horse-power is determined by the mean pressure of the indicator cards, the revolutions, and the coal account in the usual way.

But the Board decides the propriety of making certain corrections to these "data."

(To be continued.)

Sugar River Valley Railroad.

A meeting of the citizens of Madison, Wis., was recently held for the purpose of furthering measures to secure the early completion of the land grant road, between that city and Portage. The President, Mr. Campbell, and the Chief Engineer, were present.

Railroad Crossings.--Accidents.

RAILROADS IN CITIES: THE CROSSINGS AT STREETS: A BROKEN LIMB: CONCURRENT NEGLIGENCE.

The plaintiff was walking through St. Joseph street, in the city of Rockester, at a point which is crossed by the New York Central Railroad, and while on the track of that company was struck by the tender of a locomotive and thrown down, and his leg broken. He then commenced an action against the company to recover damages for the injuries he received. The action was tried in the Supreme Court before Justice Smith and a jury, at the Monroe Circuit in January, 1861, when the plaintiff was non-suited, on the ground that his own negligence contributed to the injury.

From the decision of the Justice non-suiting him, and the judgment entered thereon dismissing his suit, the plaintiff appealed to the General Term of the Supreme Court, where after argument the judgment of the justice was affirmed.

From the facts as developed on the trial it appeared that the plaintiff on the 27th of September, 1858, at about 4 o'clock P. M. was going south towards the business part of the city of Rochester, on the east side walk of St. Joseph street, and as he reached the north side of the railroad, where it crosses that street, a locomotive drawing a long train of freight cars, was approaching from the west, and about to cross the street. The plaintiff continued on towards the south, on the line of said south walk, until he had crossed the northern-most track of the railroad, and stopped upon the second track, (there being five parallel tracks at that point,) until ths freight train had crossed the street. The two north tracks, east of St. Joseph street, were occupied by empty freight cars, 10 or 12 in number—box cars, eight feet high—the northwest end of which was so near the line of the side walk that the plaintiff could nearly touch it with his hand as he passed. He stood, while the freight train was passing, at the west end of the line of empty freight cars on the second track. The train in passing made a great deal of noise. As soon as it passed, the plaintiff looked east, and the track was clear as far as he could see, which was only eight or ten feet, in consequence of the obstruction by the empty freight cars, and he started to go south across the other tracks, at the same time turning his face to the west towards the depot, and continued to look in that direction, until he approached the north line of the third track, when he was struck on the left shoulder, turned around and thrown down, and one leg crushed so as to require amputation, and the other very badly injured by the tender of the locomotive, which was backing down from the east towards the depot at the west, and was at that moment crossing St. Joseph street. He did not look east after crossing the south rail of the second track. The tracks at that point were all perfectly straight, and the spaces between them seven or eight feet as laid down on the map. The engine, tender and freight cars all project over the track, about eighteen inches. The engine was backing down very fast, and evidence was given tending to show that the bell was not rung until after St. Joseph street had been crossed, and the plaintiff injured. There was no flagman at this crossing at the time of the accident, though there had been one the week before. The crossing was in a populous and thickly settled part of the city. The plaintiff was 36 years of age, resided on St. Joseph street, two miles north of the railroad, was a carpenter and worked a great deal in the city, crossing the railroad track very often, sometimes every day, and sometimes not in three or four weeks; sometimes saw empty cars standing there, but not so near the side walk; took no notice how near; had crossed the track twice before the same day at the same place. There was no evidence of bad habits on the part of the plaintiff, but on his way up from his house to the railroad, and about twenty minutes before he was injured, he stopped at a grocery, complained of being unwell, and took a table-spoon-full of caraway and bitters.

The following is the opinion of the court rendered at the decision of the case.

KNOX. J.—The question now is—Was the nonsuit properly granted?—and, that is answered by the reply which shall be made to the question—Did the plaintiff's own negligence contribute to produce the injury of which he complains?—For a multitude of cases might be cited to sustain the proposition, that a party cannot recover for an injury of which his own negligence is in whole, or in part, the proximate cause, though there be gross negligence on the part of the defendant, short of wilful wrong.

Indeed this has been so often held, that in the case of Johnson *vs.* the Hudson River Railroad Company Judge Denio says, the proposition must now be considered "a legal postulate.

In my judgment the facts present a clear case of negligence on the part of the plainfiff. Here were five parallel tracks over which the plaintiff had passed very often, sometimes every day, in three or four weeks and quite near the depot in the city. From the number of the tracks, and the proximity of the depot, the plaintiff must have known that passenger and freight trains were both frequently passing each way and liable to pass each way at any, and the same or near the same moment of the day. To go upon the track, therefore, at such a point without looking up and down the track to see whether it would

be safe to do so, was extreme carelessness. He had no ground for supposing, that because one train of cars had but a moment before passed east on one of the tracks, another train of cars would not pass west on another of those tracks at the same time or near the same time.

Indeed he ought to have known from the number of these tracks, that this was very likely to happen as it did happen in this instance.

That there were obstructions on the track, and that the road crosses it at such an angle, as made it difficult to see whether there were any cars moving on them, should have excited the plaintiff to greater caution, and not have lulled him into carelessness. In a word, instead of stepping upon the track and looking toward the west only, where it does not appear that there was anything to attract and fix attention, he should have looked toward the east and then this accident would not have taken place.

If the plaintiff cannot be said to have been guilty of negligence in this case I can hardly imagine one where it can be imputed, short of that where the party puts himself upon the track of a road with an intention of being struck by the moving cars.

While the courts should, and do require on the part of railroad companies "that their road and all its appurtenances be in perfect order and free from any defect which the utmost vigilance aided by the highest degree of knowledge or skill can discover or prevent" and that the road and its cars and engines, etc., be under the control and management of men of skill and experience in their several stations, in order that the public may enjoy, with as little risk of life and limb as possible, the incalculable benefits of this method of travel they should also require for the same reason that all persons in or about the cars or crossing the track should exercise a vigilance and circumspection commensurate with the danger which may reasonably be apprehended from the nature of the motive power employed, and the velocity with which these carriages are driven. As there was no disputed question of fact in the case, the question is one of the pure law for the court, and I think it was properly ruled at the Circuit. Motion for new trial denied.

OFFICE OF THE ILLINOIS CENTRAL R. R. Co.,
New York, Dec. 5, 1861.

AT a meeting of the Board of Directors of the ILLINOIS CENTRAL RAILROAD COMPANY, held at their office in New York this day, it was

Resolved, That an assessment of FIVE DOLLARS per share upon the Scrip Shares of the Capital Stock of the Company, be and the same is hereby called payable on the twentieth of January, 1862; and that the same be payable on the Stock registered in the City of New York at the office of the Company in that city; and on the Stock registered in London at the office of Messrs. ROBERT BENSON & Co., London; and that parties desiring to pay their assessment in London, may pay the same at a rate of exchange sufficient to produce five dollars per share to the Company in the City of New York.

Resolved, That the transfer books be closed on the afternoon of the 15th January next, and re-opened on the 20th day of the same month; and that no transfer be permitted, on or after that day, of shares upon which the foregoing assessment shall not have been paid.

THOMAS E. WALKER, Treasurer.

The eighty-dollar certificates to be returned on payment of the above.

OFFICE OF THE ILLINOIS CENTRAL R. R. Co.,
New York, Oct. 29, 1861.

HOLDERS of the stock of this Company, as registered upon the books of the company at the close of business on the 15th day of January, 1862, will be entitled to Canceled Bonds Scrip for five dollars upon each share of stock held by them deliverable on or after the 1st day of February next; and parties holding certificates are hereby notified to have the same registered in their own names on or before the said 15th day of January. 48

SANFORD'S
MAMMOTH
OR
GLOBE
HEATERS.

The best stoves for RAILROAD DEPOTS and SHOPS, and all places where a great heat is required. They are very durable, and very economical of coal.

Beware of imitations that are inferior in strength and in other respects.

TESTIMONIALS.

HUDSON RIVER RAILROAD OFFICE, N. Y

This Company have now in use, over two hundred of Sanford's Mammoth Heaters, in Station Houses, Work Shops, and Engine Houses; we commenced using them in 1853, and some of the first stoves put up are still good and in use. We consider them the best Heaters now in use.

J. M. HEBARD, Supply Agent.

UNION FERRY COMPANY.

The Mammoth Heaters have been used by this Company in their waiting rooms at the several ferries and found to be very excellent stoves and more durable and valuable than any heretofore used. CYRUS P. SMITH, Managing Director.

The COSMOPOLITE
PARLOR RADIATOR, &
GAS BURNER,

Introduced one year ago, already ranks as the **LEADING STOVE** for PARLORS, SITTING ROOMS, and all places where a small, pleasant heat is desired.

Fire may be kept all winter with an astonishingly small supply of coal.

Send for description and testimonials.

SANFORD, TRUSLOW & CO.,
Nos. 239 and 241 Water st., N. Y.

Challenge Air-tight
KITCHEN RANGES,

May be placed in a fire-place without masonry, and with or without water-back; or may be set out on feet, as an ordinary stove.

This range, already very popular, has the **LARGEST OVENS** of any in the market; BAKES PERFECTLY, never failing to brown at the bottom; BOILS, ROASTS and and BROILS with unequalled facility and dispatch, and with extraordinary **ECONOMY OF FUEL**, which may be either coal or wood. Flues large and easily cleaned. A child can manage it, so simple is its construction. Castings extra heavy, and design plain and chaste.

Four sizes, adapted to families and hotels.

Beacon Light
SUMMER AND WINTER
PORTABLE RANGE,

Is a very popular range, having six boiler holes, one large oven that bakes perfectly, with an arrangement for roasting, or heating irons at the end. It is very economical of fuel. For a FEW DOLLARS a family may be supplied with a PERFECT COOKING APPARATUS, equal to the highest price stove in the market.

Three sizes, adapted to coal, or wood.

SANFORD, TRUSLOW & CO.,
239 and 241 Water st., N. Y

HEAD QUARTERS, WESTERN DEPARTMENT,
St. Louis, Mo., August 23, 1861.

To Presidents and Superintendents of Railroads, Western Department, United States Army.

THE following is the basis established by the Government for the transportation of troops and supplies for the army:—

Per Passenger per mile (2) two cents for distances moved.

Equipments, munitions and supplies accompanying regiments, first class local rates, which will average about as follows:

30 miles or less		10 cents	per 100 pounds.
50	"	15	" "
100	"	25	" "
150	"	40	" "
200	"	50	" "
300	"	75	" "
350 to 400 miles not exceeding		90	" "

For transportation of Horses in small lots, the following are the usual estimated weights of Railroad Companies:

Single animals	3,000	pounds.
2 animals	4,000	"
3 "	5,000	"
4 horses	6,500	"
5 "	8,000	"
6 "	9,000	"
7 "	10,000	"
8 "	11,001	"
9 "	12,000	"

Full car loads, 13 or 14 horses, usually charged 18,000 lbs. All other supplies forwarded by Freight Trains are charged local rates, according to classification of property which will usually average, on provisions and heavy freight, two to three cents per ton of 2,000 lbs. per mile.

Fast freights, immediate transportation, and precedence given to the Government in all cases.

All despatches required by the Government, to be furnished at the actual running cost.

E. H. CASTLE,
Supervisor Railroads, Western Department.

Resources and Debts of Missouri.

The State of Missouri is one of the largest, and perhaps naturally the most wealthy State of the Union; the fertility of its rolling prairies and river bottoms, the richness of its mines, the abundance of its timbers, the salubrity of its climate, and the advantages of its geographical position, combine to indicate it as the central source of wealth for that vast population which, under any circumstances, must at no distant day, occupy the great Valley of the Mississippi. During the past ten years great numbers of settlers have, attracted by its manifest advantages, carried their capitals into the State, thereby increasing its wealth on the double ratio of production and importation so effectually, that although it completed the 40th year of its State existence only Aug. 10, 1861, it already ranks in population and valuation as the 8th in the Union.

The State, lying between the parallels of 40° 35′ and 36° north latitude, has an area, according to government surveys, of 41,211,272 acres. Of this amount 1,725,739 acres has been donated by the federal government to the State, for the use of schools, &c.; 7,274,873 acres were awarded as military bounties; 4,000,000 acres have been granted to railroads; and 22,182,000 acres have been sold to settlers, and after some other appropriations there remains 3,633,608 acres for sale by the federal government.

The soil of the State is of almost unequalled fertility, and with its rapid settlement by an industrious and active race, an almost unparalleled degree of prosperity has been developed. The following table shows the progress of the population and the number of acres that have been sold up to each period by the federal government:

	Free blacks.	Slaves.	Whites.	Total.	Acres sold.
1810.	607	3,011	17,227	20,845	.....
1820.	376	10,222	55,988	76,586	.....
1830.	569	25,091	114,795	140,455	.....
1840.	1,574	58,240	323,888	383,702	5,767,778
1844.	1,581	70,158	456,318	528,057	7,081,543
1850.	2,667	89,289	592,176	684,132	9,726,360
1855.	2,910	101,101	708,785	812,510	16,107,108
1860.	3,105	115,619	1,082,490	1,201,214	22,182,000

The black population has increased in a ratio very much smaller than in other slave States, while the white population has in the last ten years increased in a ratio equal to that of any of the Western States.

So rapid a settlement of a rich soil could not but be followed by very important results in respect of accumulation of wealth. These results manifest themselves in a marked manner, in the official returns of taxable valuations, which have been as follows, exclusive of the value of the blacks, which for 1860 was reported at $44,181,912:

TAXABLE VALUATIONS.

	1850.	1858.	1860.
Acres of land.	5,252,061	26,525,338	26,696,987
Value of real estate....	$31,512,391	221,605,767	232,821,716
Personal prop.	7,813,508	39,072,373	40,924,776
Bonds, money, &c..	17,972,180	35,556,318	36,181,201
Total ..	$57,198,079	296,234,520	309,927,693

These figures are those on which the State taxes are levied, and are therefore very far below the truth. If we place the increase for ten years at five fold in round numbers, and assume that the amount taxed bears at both periods the same proportion to the actual value, then the increase in ten years will have reached $360,000,000, or about $500 per head for the average population. A result so favorable is due to that combination of advantages for which the State of Missouri is remarkable. Her chief city, situated near the centre of the Mississippi River, with its 3,000 miles of navigation, and 1,500 steamers, is also near the middle of her Eastern boundaries, at a point where the Missouri coming from the West, crossing prairies of prodigious fertility, and taking up the Osage in its course, pours its rich freight upon the bosom of the "father of waters." From it, at an early period, the route to the Pacific by railway was indicated. The distance from St. Louis to San Francisco is 2,759 miles, along a route, midway in which, Pikes Peak with its golden treasures has attracted emigrants. In 1858, by this route, an overland mail was established which brought the Pacific and the Mississippi within 25 days of each other. This year the telegraph has left nothing to wish for in the way of prompt communication. With all these advantages added to the immense productions of the State, St. Louis speedily rose to rank as the 6th city of the Union in point of wealth and population. The latter in 1860 was 160,577, and the valuation $94,643,865, or nearly as much as that of the whole State in 1850.

With all its natural advantages and industrial prosperity, Missouri has been singularly free of debt. It did not join in the speculative mania that overtook other Western States in 1837, but maintained a reserved position. The constitution of the State, adopted in 1820, provided that there should be but one bank, with not more than five branches; that the aggregate capital should not exceed $5,000,000, of which one half was reserved to the use of the State. It was not until Feb. 2, 1837, that the State acting upon that provision, authorized an emission of bonds for $2,500,000 for the State subscription to the bank capital. These bonds were of $1,000 each, made payable to bearer at the Bank of America, New York, May 1, 1863; interest 5½ per cent., semi-annual. These bonds were placed upon the market through the London house of F. Huth & Co., at the moment of the great financial revolution, when State repudiation trod rapidly upon the heels of individual insolvence and corporate bankruptcy. The negotiation was therefore not successful. The bank, however, went into operation with a capital of $533,358, and it was the only one at the South and West that did not suspend its payments in 1839.

A few of the bonds then sold, form the principal

part of the direct debt of the State which is as follows:

	Date.	Inter-est.	Paya-able.		Amount.
Bank stock..	1837	5	1862	Jan. & July.	$163,000
" ..	1837	5	1863	May & Nov.	100,000
" ..	1837	6	1863	Jan. & July.	99,000
Capital stock.	1838	6	1863	Jan. & July.	40,000
State bonds..	1838	6	1863	Jan. & July.	200,000
Total					$692,000

Although without aid from the State, the bank and its branches ably fulfilled its duties, furnishing all the facilities that the growing commerce of the State required. However, in 1857, a free banking law was enacted authorizing 10 banks, with an aggregate capital of $15,500,000, of which the State might hold $1,000,000. Under this law the number of banks and branches increased from 10, with a capital of $2,620,615 in 1858, to 42, with a capital of $13,178,299 in the present year.

While most other States had embarked largely in internal improvements, Missouri had, up to 1849, taken no part in them. In that year the importance of a railroad connection with California, to secure our then new possessions, forced itself upon the public mind, and St. Louis by common consent, was designated as the point of departure. In March, 1849, the road was incorporated by an act which was amended in 1851. Congress following the policy extended to other States, donated the right of way, and a portion of the public lands in aid of the road. In 1853, the State invested the Pacific road with the lands and rights donated by Congress, and also agreed to lend its bonds to that and other roads, on the conditions that, when the directors of a company give proof of a *bona fide* subscription of $50,000 by individuals, the State would issue a like amount of bonds for each subscription, until the appropriation should be exhausted. To secure the State the entire franchise of the roads, their lands, buildings, furniture and equipments are mortgaged to the State.

Under this law 6 per cent. bonds of the State were issued to all the roads, except the South West Branch road. The 7 per cent. bonds of which company were endorsed by the State. While these issues were in progress the panic of 1857 overtook the country and stopped the negotiation of bonds. The State then promptly enacted a new law to place the State credit on a firmer basis. The further issue of bonds was restricted to a sum of $2,120,000, required to complete work nearly done. These bonds were not to be sold under 90. The Pacific road was to return the 7 per cent. endorsed bonds and receive in lieu 6 per cent. direct bonds of the State. A tax of one mill was levied on State valuation, to be paid over to the Commissioners of the interest fund. These Commissioners consisted of the Auditor and State Treasurer, according to the law of 1855, to secure prompt payment of the public debt. The Commissioners were required to appoint some bank in the City of New York, where the interest shall be paid. These, with some other provisions, were calculated to meet the emergency.

The following table shows the railroads to which bonds were issued, the amount authorized, the length of the roads, and the cost of their construction to the present year. To the amount of bonds issued should be added $400,000 for bonds sold in 1859 to meet the interest on railroad bonds, making the aggregate $23,301,000.

Roads.	Amount authorized.	Issued to Jan., 1861.	Length, miles.	Cost, 1861.
Pacific.....	$7,000,000	$7,000,000	163	$10,033,823*
" S. W. Br..	4,500,000	4,100,000	43	1,442,710*
Han. & St. Jose'h.	3,000,000	3,000,000	206	7,659,705
North Missouri..	5,500,000	4,350,000	188	5,632,521*
St. Louis & Ir. Mt	3,600,000	3,501,000	87	5,200,744*
Cairo & Fulton....	650,000	250,000	21	420,366
Platte County....	700,000	150,000	37	----------
	$24,950,000	$22,351,000	757	$30,589,869

The roads marked * are those for which the State provides the interest since January, 1860. To provide for it at that date, the State borrowed the money, $516,190, of the St. Louis banks at 8 per cent., and 1½ per cent. for exchange on New York. The State holds a mortgage on the above 757 miles of roads that have cost $30,589,869, and, in addition 4,000,000 acres of land valued at $8,750,000, and bank stock to the amount of $254,000 —a total of $30,593,869.

The operation of the railroads imparted a new impulse to the productive industry of the State, and by improving business and increasing its profits, lightened the burden of taxation, while the product of the taxes increased. The rate of taxation in the State is two mills on the dollar, and the revenue and expenditures have been for the past six years, according to three successive biennial reports of the auditor, as follows:

	Revenue.	Expenditures.	Balance Oct. 1.
Oct. 1, 1856, 2 yrs.	$1,007,113	$871,818	$271,899
" 1, 1858, 2 " .	1,361,368	1,132,176	1,405,041
" 1, 1860, 2 " .	3,454,788	2,137,669	1,705,172

This large increase of revenue has resulted from the growing wealth of the State, and affords a perfect guarantee of ample means under the law of 1857 for the payment of interest on the debt. Should the State be required to pay all the interest, $1,398,060, on the debt of $23,301,000, a small addition to the present levy will suffice for that purpose.

It will be observed that the taxable value of property in the State has in ten years increased $252,729,614, and the debt contracted for the railroads in the same time has been but *nine* per cent. of that sum. The effect of the railroads in opening up markets to distant regions, and in promoting interchange generally, has been instrumental in creating a large portion of the improved valuation, and the State holds property considerably in excess of the amounts for which it has become liable for the construction of the roads.

Attention may here be called to the distinction between the debt of Missouri and the loans of other States.

Mississippi, Arkansas, Alabama, Florida, and Illinois loaned their credit for the creation of banks, which, under pretence of facilitating the loans of the State, became the instruments of speculation, and finally exploded, leaving nothing behind but a burdensome debt, or the evidence of their existence. Missouri has loaned its credtis for the construction of works which are imperishable in their nature, and which have already added fivefold their own cost to the wealth of the State, and remain permanent instruments of commercial and undisturbed prosperity.

☞ Mr. John Corning, of Buffalo, has been appointed Superintendent of the Western Division of the New York Central Railroad Company, vice Job. Collimer, deceased.

Bellefontaine Railroad Line.

BELLEFONTAINE & INDIANA RAILROAD COMPANY.

The Bellefontaine and Indiana Railroad Company was chartered under the general railroad law of Ohio in 1848, and organized in November of the same year. By the original charter the eastern terminus of the road was fixed at Marion, but by an amendment obtained in 1849, the company was authorized to extend the road to Mansfield or to any point between that place and Marion. Galion, on the Cleveland, Columbus and Cincinnati Railroad, was ultimately chosen as the initial point, thus connecting the line directly with Cleveland. The western terminus at Union City connects the line with the Indianapolis, Pittsburg and Cleveland Railroad. In June, 1850, the first and third divisions—the first extending from Galion to Marion, 20½ miles, and the third from Bellefontaine to Sidney, 22½ miles, were placed under contract and the work soon after commenced, and in January and February, 1851, the second division extending from Marion to Bellefontaine, 40 miles, and the fourth from Sidney to the State Line of Indiana were let.

The right of way had been secured at a cost of about $12,000 only, the greater part of it, with the depot grounds, having been gratuitously conveyed to the company by the local residents. The stock subscription was also liberal, included in which were the subscriptions of Shelby County, $100,000, and of Marion county, $109,600. These were paid in bonds, which the company guarantied. In July, 1851, the company issued its own bonds to the amount of $800,000, and in November an issue of Real Estate bonds to the amount of $200,000 was made. With the proceeds of these several issues the work was carried on, and in May, 1852, track-laying was commenced. On the 17th August of the same year, the first division was opened for business, and on the 9th December following the third division. The second division completing the road between Galion and Sidney was formally opened on the 23d April, 1853; and the whole line was completed on the 12th July. On the 1st November following the contractors surrendered the road to the company. The fourth annual report made up to the 31st December, 1853, showed that the expenditures for all purposes had reached $2,838,951; or deducting real estate and saleable materials to $2,585,769, or $21,913 mile of road. A large floating debt, however, had accumulated, and to liquidate this, the company, in February, 1854, issued $200,000 in Income bonds, and in April, 1855, a series of 2d mortgage bonds to the amount of $300,000, about one-half of which only has yet been issued. The Real Estate and Income bonds became due in 1858 and 1859 and were extended. Since April, 1856, the Bellefontaine and Indiana and the Indianapolis, Pittsburg and Cleveland Railroads have been operated under a joint directory, the working expenses being charged to each according to the length of road owned. Each company, nevertheless, maintains its separate organization and receives the full benefit of the earnings of its own road, which it is to keep in repair.

The capital stock authorized was $2,000,000, in 20,000 $100 sh.; paid in $1,859,813 on 18,598 sh.

The funded debt of the company, January 1, 1861, was $1,266,078, classified as follows:

1st mortgage 7 per cent. coupon bonds, $791,-

000—issued 1st July, 1851, and payable, principal 1st July, 1866, and coupons semi-annually 1st January and 1st July in New York. Whole issue $800,000. Nine bonds have been converted into stock.

2d mortgage 7 per cent. coupon bonds, $160,000 issued 1st April, 1855, and payable, principal 1st April, 1870, and coupons semi-annually 1st April and 1st October in New York. Whole issue $300,000. The amount outstanding includes $65,937 issued in exchange for dividend scrip of 1856.

Income 7 per cent. bonds, $186,000—issued 1st February, 1859 (now mostly extended to 1870), and interest semi-annually 1st February and 1st August in New York. Whole issue $200,000.

Real estate 7 per cent. bonds, $119,750—issued 29th November, 1851, and payable principal 1st January, 1858, and interest semi-annually 1st January and 1st July in New York. Whole issue $200,000. These bonds with the exception of $1,000 (not presented) have been extended, viz: $30,750 to 1st January, 1861, $40,000 to 1st January, 1863, and $48,000 to 1st January, 1866.

Dividend No. 3 scrip (issued in 1856 and to be funded in 2d mortgage bonds), $9,328.

The floating debt of the company was $62,232, viz: bills payable $11,770, car loan C. C. and C. R. R. Co. at 7 per cent. $11,737 and unpaid interest on bonds $38,825. Cost of road and equipment, $3,027,931.

To obtain the exact length of railroad in New Hampshire subtract from the above 10½ miles of the Cheshire railroad lying in Massachusetts, and add as follows:

	Miles.
Atlantic and St. Lawrence R.R. from Maine.	52.00
Boston and Maine R. R. from Massachusetts.	40.17
Nashua and Lowell R. R. "	6.22
Worcester and Nashua R. R. "	6.57
Total from other States	104.96

Railroads marked thus (*) have been recently re-organized on a reduced capital. In all cases the capital account and cost of property are stated as found on the books of the several companies.

Rights of Forwarders.

DISCREPANCY BETWEEN THE AMOUNT STATED IN THE BILL OF LADING AND THAT ACTUALLY SHIPPED. WHEN A BILL OF LADING IS OPEN TO EXPLANATION BY PAROLE EVIDENCE. CARRIERS ENTITLED TO RECOVER FREIGHT FOR THE AMOUNT ACTUALLY DELIVERED.

The defendant purchased of one A. W. Horton at Buffalo, a cargo of wheat in bulk, to be delivered on board of a canal boat. The assignor of the plaintiff stood by and saw all the wheat weighed into the boat; and at the time of the delivery he executed two bills of lading, one of which he retained, and the other was sent forward to the defendant Peck, the consignee. In these bills the quantity of wheat specified was 5,589 bushels. Horton then made his draft upon Peck for the amount, which was presented the next day after the bill of lading arrived, and was paid upon the faith of the bill of lading before the wheat arrived. Millers have no other evidence of the amount shipped than the bill of lading, and it is customary to pay drafts without waiting for the arrival of the boat.

Upon delivery at Rochester, the wheat fell short 124¼ bushels; it being worth $1 per bushel. The consignee availed himself of the provisions of the bill of lading, and deducted the deficiency from the balance of freight due to the captain. The captain subsequently assigned his claim for freight to the plaintiff Meyer who instituted this action against the defendant Peck the consignee. The tally on inspection at Buffalo was found to be correct. The custom among millers and boatmen at Rochester, is, if wheat falls short, to deduct the deficiency from the freight due; if it overruns, the captain demands, and is paid for the excess.

Upon the trial of the action the court was requested to charge, that this bill of lading was, as respects quantity, a contract and not like a mere receipt open to explanation; and also that if the jury believed the draft was paid upon the faith of the bill of lading, then the plaintiff was estopped from showing any deficiency; but the court refused both of these requests, and on the contrary charged the jury that the bill of lading was not conclusive, but was merely evidence to raise a presumption, and that the plaintiff was at liberty to show that the quantity admitted to have been received on the face of the bill was not actually received. And also that if the jury should find that such was the fact, and that the plaintiff's assignor delivered at Rochester all the wheat in fact received, although less than the amount admitted in the bill of lading, the plaintff was entitled to recover. The jury found a verdict in favor of the plaintiff for $95.88; and from the judgment entered thereon the defendant appealed to the General Term of the court. The following is the opinion delivered at the decision of the case, by the appellate tribunal.

SMITH E. DARWIN.—The exception taken by the defendants counsel to the refusal of the circuit judge to grant the motion for a non-suit in this case I think is not well taken. It appeared when that motion was made that the witness Pettis the plaintiff's assignor, had received of the defendant's agent at Buffalo a quantity of wheat for transportation to Rochester consigned to the defendant. That he signed a bill of lading in which the wheat is represented, as consisting of 5,589 bushels. The plaintiff gave evidence tending to prove that all the wheat received by Pettis was in fact delivered, although it appeared that there was a discrepancy of 124 bushels between the quantity in the bill of lading, and the quantity actually delivered to the defendant at Rochester. As between the parties a bill of lading is a mere receipt and so far respects the condition and quantity of the goods shipped, is open to explanation by parole evidence. The defendant was both shipper and consignee.

It was therefore a question for the jury upon the evidence given, whether Pettis delivered all the wheat he received. If he did the plaintiff was entitled to recover for the freight of the whole quantity delivered and the defendant was not entitled to retain the value of the 124 bushels not received by him. The motion for a non-suit was therefore properly denied. Several exceptions were taken to the charge and to the refusal of the judge to charge as requested. The judge was requested to charge that the bill of lading was conclusive as to the quantity of wheat mentioned in it, and the defendant was entitled to recoup the value of the deficiency, as against any claim for freight. The judge refused so to charge, and, on the contrary, charged that the bill of lading was not conclusive, but was merely evidence to raise a presumption which must be overcome by the plaintiff. The exceptions to the charge and the refusal to charge in this particular present the same question raised on the motion for a non-suit, and are not well taken, if the relation of the parties remained unchanged by the proof given in the further progress of the trial. The complaint states that A. W. Horton, the duly authorized agent of the defendant shipped upon the canal boat C. Barnes of which C. Pettis was master, the cargo of wheat in question. This allegation is not controverted in the answer and must therefore be taken as true for the purpose of this action. The proof given by the defendant is however in conflict with this allegation. The defendant testified that he purchased the wheat of A. W. Horton, and the bill of sale, bill of lading, and draft for the payment would all seem to establish that statement, I think from the evidence, that such must have been the fact. Horton would stand upon this assumption in the relation of vendor of this wheat to the defendant. I cannot see that this change of relation between Horton and the defendant changes the actual rights of the parties. The contract of sale was made at Buffalo. Nothing was paid at the time, and no title to the wheat passed till the delivery of it to the carrier. Upon the assumption that the carrier delivered to the defendant all the wheat he received of the vendor at Buffalo, it follows that the vendor did not deliver all the wheat purchased by the defendant. This was a question of fact, and was the question at issue and tried and submitted to the jury. The carrier was the agent of the consignee to receive the property, and if he accounted for all he received to the defendant, the latter has a just claim for recovering back of Horton, the vendor. For the deficiency in the quantity of wheat, if he has paid for the whole quantity purchased. Horton and Peck were the original parties, and Pettis, the carrier was a mere intermediate man between them. If Horton had notice of the commencement and pendency of this action, he would be bound by the result, and the defendant might recover of him the amount mistakenly paid upon draft, for the purchase money of this wheat. Between Horton and Peck the case was, and is open to all the equities between them as original vendor and vendee of this wheat, and their rights are not at all changed or affected by anything done after its shipment.

If the bill of lading had been transferrred by Peck to a *bona fide* purchaser for a valuable consideration paid on the faith of it, Pettis, the captain of the canal boat, who signed the bill of lading, and any assignee of the freight from him, would be concluded by the bill and would be estopped from showing any mistake in regard to the quantity shipped. But the defendant does not occupy the position of an assignee of the bill of lading for value. He was the original vendee and consignee of the property. It is true, he accepted a bill for the amount of the whole purchase, but he could not have done so on the faith of this particular bill of lading, for it did not embrace the whole quantity of wheat specified in the bill of sale, and it does not appear when the residue of the wheat was shipped by Horton or received by the defendant. But the rights of Peck in any point of view cannot be higher than they would have been, had he actually paid for the whole quantity of 7,494 bushels of wheat, at Buffalo, at the time of the purchase, before any of it was shipped. The wheat, it appears, was then probably in bulk, in the elevator, from which it was subsequently delivered to Pettis. In such case there would be, between parties, simply a failure to deliver the whole quantity purchased, and the vendor would be bound to make up the deficiency.

This view of the relation of the parties to each other disposes also of the other exceptions taken at the trial to the charge as given, and to the refusal of the judge to charge as requested.

As the defendant was not in a position to possess the rights of an assignee for value, but was really the principal or one of the principal parties in the transaction, the judge was right in the charge and refusal on this question. The case was properly submitted to the jury on the main issue of fact, the issue relating to the quantity of wheat actually received and delivered by the carrier, and they having found for the plaintiff on that issue, their verdict, I think, is conclusive, and cannot be disturbed. The judgment should be affirmed.

☞ The Cleveland, Columbus and Cincinnati Railroad Company are engaged in altering several of their wood burning engines to coal-burners.

American Railroad Journal.

Saturday, December 21, 1861.

Share and Money Market.

The Share Market the past week has been an extraordinarily excited one, owing to a complication of causes, the principal of which are the report, of the Secretary of the Treasury, which has been very badly received by the public, and which threatens to bring the Treasury and the Banks in direct collision; and the English imbroglio growing ont of the Slidell and Mason affair. The alarm from this cause is somewhat subsided, as no one really believes war between this country and England to be possible. The Share Market has fallen off very heavily. Money is loaned only very sparingly, and much higher rates are asked. The demand, however, is small. Exchange which on Monday was at 111, has fallen off somewhat. The public mind still remains in a very disturbed state.

The interest on the first mortgage bonds of the Brooklyn City and Newton Railroad Company, falling due on Jan. 1, will be paid, on the 2d, at the office of the company.

Holders of Trustees certificates for over-due coupons of the 4th mortgage bonds of the New York and Erie Railroad Company, are notified that payment is now being made at the office of the Receiver, at the foot of Duane-st., of the coupons of April and October, 1859, for which certificates have been issued (with interest from May 1, 1861, to Dec. 15, 1861,) out of the balance in the Trustees' hands from assessments, and out of the net earnings of the road applicable to that purpose, under the order of the Supreme Court.

The Minnesota Mining Company have declared a semi-annual dividend of three dollars per share, (making in all $8 per share, or 16 per cent. on the capital stock), from the net earnings of the year 1860, payable at the office of the company in New York, on and after the 6th of January ensuing.

Holders of the first mortgage bonds of the Jeffersonville Railroad Company are notified that the company will redeem on the 1st of January next, a the office of the United States Trust Company, New York, at the lowest bid below par, a part of its first mortgage bonds, agreeable to the provisions of a contract pertaining thereto, bearing date April 14, 1859. Offers for the sale of said bonds, should be addressed, under seal to the United States Trust Company, and indorsed "Offers of the first mortgage bond (or bonds) of the Jeffersonville Railroad to the sinking fund," which offers or bids will be received until noon of the 1st day of January aforesaid.

The annual meeting of the stockholders of the Cleveland, Columbus and Cincinnati Railroad Company, will be held in Cleveland on the 8th of January next, for the election of eleven directors, and for the transaction of important business relating to the purchase of that part of the Springfield, Mount Vernon and Pittsburg Railroad lying between Delaware, Ohio, and Springfield, Ohio, and other business. The transfer books will be closed on the 27th inst., and remain closed until the 9th January next.

The Boston and Worcester Railroad Company have declared a dividend of 4 per cent., payable Jan. 1, 1862.

The Boston and Lowell Railroad Company have declared a dividend of 2¾ per cent., payable Jan. 1, 1862.

New York Central Railroad.

The annual statement of the operations of this company for the fiscal year ending September 30, 1861, was submitted at the meeting of the stockholders held on the 11th inst. The following is an abstract:

EARNINGS AND RECEIPTS.

Comparative statement of funded debt and capital stock on the 30th September, 1860 *and* 1861:

	1860.	1861.
Debt certificates, less amount of sinking fund	$7,745,000	$7,552,000
Bonds for convertible loan	3,000,000	3,000,000
Debts of the former companies outstanding	550,372	263,554
Bonds for funding the debts of former companies	1,308,000	1,553,000
Bonds for railroad stocks	680,000	680,000
Bonds for real estate	175,000	166,000
Bonds to Buffalo and N. Falls R. R. Company	86,000	82,500
Bonds of B. & N. F. R. R. Co.	35,000	24,000
Bonds and mortgages	253,151	301,951
Convertible bonds, payablo in 1876	500,000	990,000
Total amount of funded debt	$14,332,523	$14,613,005
Capital stock	24,000,000	24,000,000
Total amount of fund. debt and capital stock	$38,332,523	$38,613,005

Cost of road and equipment:

	By last report.	To present time.
For graduation and masonry	$6,777,106	$6,777,106
For bridges	808,068	808,068
For superstructure, includ. iron	10,340,641	10,378,799
For passenger and freight stations, buildings & fixtures	1,176,521	1,216,521
For engine and car houses, machine shops, machinery and fixtures	845,113	996,122
For land, land damages and fences	4,089,117	4,276,082
For locomotives and fixtures, and snow plows	2,351,466	2,351,466
For passenger and baggage cars	851,128	851,128
For freight and other cars	2,054,483	2,054,383
For engineering and agencies	603,529	603,529
Construc. account of the R. & L. O. R. R. Co.	150,000	150,000
Construction account of the B. & N. F. R. R. Co.	658,922	658,922
Construction acc't of the Lewiston R. R. Co.	400,000	400,000
Total cost of road and equipment	$31,106,094	$31,524,226

INCOME ACCOUNT—*For the year ending Sept.* 30, 1861.

To expense of maintaining and operating road		$4,647,979 11
To coupons and interest		1,001,977 16
To dividend No. 15, Feb., 1861, 3 per cent.	$720,000	
To dividend No. 16, Aug., 1861, 3 per cent.	720,000	
		1,440,000 00
To future income: Amount of one year's contribution to sink'g funds, transferred to Current Income Account:		
Debt certificates	$111,764 57	
Bonds to Buffalo and Niagara Falls R.R.Co.	3,200 58	
		114,965 15
To rent of the Niagara Bridge and Canandaigua Railroad		60,000 00
To sundry bad, doubtful, and disputed balances and items, accruing from the business of several years past, now charged off under authority of the Board of Directors		164,754 40
To balance, Sept. 30, 1861		1,576,378 45
Total		$9,006,054 27

			$41,045,289 13

FUNDED DEBT.

Until the present year, no new issues of funded debt have been made by the Company since the $3,000,000 loan in 1854, except $318,000 of the Convertible Bonds due in 1876, as mentioned in the report of 1860. All the improvements on the line of road, purchases of real estate, as far as paid for, and additions to machinery and rolling stock, and other property of the Company, made in the meantime, were provided for out of income, until the amounts thus added to the construction and investments accounts had become too large to be carried by the income account, and that account was therefore refunded, in part, by an addition of $490,000 to the issue of convertible bonds due in 1876, as above stated.

The surplus of income account used for the construction and investment and accounts, remaining after this issue, was, on Sept. 30, 1861, as will appear by the following statement		$1,466,852 15
Construction account (see balance sheet		31,524,226 15
Investment account		921,131 50
Total		$32,445,357 65
Capital stock	$24,000,000 00	
Funded debt, less debt certificates and bonds to Buffalo & N. F. R. R. Co. for premiums allowed on stock at consolidation	6,978,505 50	
		30,978,505 50
Balance		$1,466,852 15
The value of fuel and supplies not included in the assets of the Company, as will appear from the balance sheet and inventory, is.		1,000,000 00
Surplus of income account, Sept. 30, 1861, invested as above stated		$2,466,852 15

CONSTRUCTION.

During the year ending with September 30, 1861, the following amounts were charged to construction:

For additional real estate	$188,964 87
For erections and improvements at West Albany, and on account of new engine house at Rochester	151,008 82
For half cost of rebuilding the Buffalo elevator, the balance having been charged to expenses, as stated in report of 1860	40,000 00
For cost of 5.36 miles of new and additional sidings laid down	38,157 84
Total	$418,131 53

ITEMS CHARGED TO EXPENSE.

During the same period, in addition to the extensive general repairs to the road-bed, machinery, and rolling stock, the cost of the following items has been charged to expenses:

The building of several new passenger, freight and water stations, the latter in some cases including the cost of caloric pumping engines.

The addition of 115 new freight cars to the equipment, including several iron cars.

The substitution of iron for wooden bridging mentioned in the report of last year has been continued.

There are now fifteen iron bridges upon the line, all brought into use within the last three years, of spans from 22 to 125 feet, the most considerable being that of several spans across the Mohawk river at Schenectady, the whole length reduced to single track being 3,973 1-6 feet, and the aggregate cost $91,372 40, all of which has been charged to expenses.

IMPROVEMENTS AT WEST ALBANY.

The very complete arrangements made at West Albany for the cattle trade, have proved to be highly important to the business and valuable to the interests of the company. That place has already become one of the great cattle marts of the country. Here the purchasers from New York and New England meet the drovers from the West, and the weekly market is one of great and increasing importance.

The machine and repair shops, also recently erected by the company at West Albany, have just been brought into use. They are substantial, but plain and appropriate structures, well designed for the purpose for which they were built, and will be productive of increased economy and efficiency in the management of the company's business.

With the exception of perhaps one building, very much needed for storing lumber and other supplies, and an additional smith shop, it is believed that no further additions of any considerable extent, to the arrangements thus made, will be necessary for some time to come.

These improvements had become very desirable, and the directors believe that they will prove to be very valuable in the working of the road, and meet the cordial approval of all who may feel inclined to inquire into their character.

The equipment of the road consists of 215 locomotives; 196 first class 8 wheel passenger cars; 40 second class and emigrant cars; 61 baggage, mail, and express cars; 2,759 freight cars; and 350 cars for gravel and other service. All the engines are in good condition, 115 freight cars have been added during the year, and charged to expense.

Miles run by passenger trains, 1,850,056; by freight trains, 2,727,730; by other trains, 369,367. Aggregate miles run by passenger cars in passenger trains, 5,593,178; do., by baggage, mail and express cars, do., 2,359,503; do., by freight cars, do., 3,263,170—aggregate miles run by all cars in passenger trains, 11,215,851.

Number of passengers carried in the cars, 2,153,944. Miles traveled by passengers, 116,174,787. Tons of freight carried, 1,167,302. Total movement of freight, or number of tons carried one mile, 237,392,974.

The rate of speed adopted for ordinary passenger trains is 28 miles per hour; by express trains, 35 miles; by freight trains, 15 miles.

Length of main line from Albany to Buffalo, 297.75 miles; length of side, or parallel branch lines, 258.13—total length of first track, 558.88; length of second track on main line and branches, 243.53; length of sidings, turnouts and switches, 126.25—total length of equivalent single track, 925.66 miles. Length of Niagara Bridge and Canandaigua Railroad, (leased) 98.46 miles; Branch line to elevator at Tonawanda, 1.63; sidings, turnouts and switches, 3.42—total length of equivalent single track, 103.51 miles.

Finances of Pennsylvania.

The Pennsylvania State Treasurer has given to the public his annual statement of receipts and expenditures for the fiscal year ending on the 30th November, 1861. The aggregate receipts foot up $3,743,525 against $1,359,612 of the previous year—being an increase of $2,383,913. In the receipts for the last fiscal year, however, is included $3,087,150 of military loans, less $606,000 returned by the general government. The balance in the Treasury at the end of the year is, however, $1,551,605, against $681,433 at the end of the previous year. That is, the State has increased its funded debt $3,087,150, and has an excess in the Treasury over the previous year of $870,172.

Debt of Ohio.

The report of the Commissioners of the sinking fund of the State Ohio, shows that the total debt for war purposes is $1,212,039. The funded foreign debt is $13,787,889. Funded domestic debt, $1,109,383. Making a total of $14,897,273. The trust fund held by the State is $62,759,540. Total annual interest, $1,048,979. Total receipts $1,639,981. Disbursements, $1,630,674.

☞ We are informed that business at the various locomotive shops is improving. Messrs. BALDWIN & Co., of Philadelphia have contracts in hand that will keep them fully employed until April next, with good prospects of additional orders. The ROGERS' LOCOMOTIVE AND MACHINE WORKS of Paterson, N. J., have several machines under way; and DANFORTH, COOKE & Co., of the same place are constructing three large coal burners for the Camden and Amby Railroad Company. Orders are also in course of negotiation by other builders.

Rates of Foreign Exchange.

The rates of Foreign Exchange, as quoted by N. BRANDT, Broker, No. 39 Exchange-place, for the steamer of December 21, were as follows:

London—60 days' sight	110½ per cent.
London—3 days' sight	111 "
Paris—60 days' sight, per dollar	5f. 12½c.
Paris—3 days' sight, per dollar	5f. 7½c.
Amsterdam—60 days' sight, per guilder	42c.
Hamburg—60 days' sight, per marc banco	37c.
Frankfort—60 days' sight, per florin	42¼c.
Bremen—60 days' sight, per rix dollar	80½c.

(From Hallett & Co.'s Circular.)

The Share Market the past week has been very much agitated, in consequence of the recommendations in Mr. Secretary Chase's Report, which are unfavorably received; and the reception of further news from England of the manner in which the Slidell and Mason affair has been received there. The two influences combined caused, on Monday, a decline of some three per cent. on governments, and a larger one on railway and other shares. With regard to Mr. Chase's recommendations of the immediate adoption of a safety fund system for all the Banks of the country, and in that way of creating a market for his bonds, which are to be used as securities, it is too absurd to require a moment's notice, and will never be seriously entertained in Congress. His recommendation is really important only in this, that it will lead to a definite financial policy for the whole country adequate to its wants, and to a more perfect harmony of action between the Treasury and the business operations of the country. We consequently regard the late report of the Secretary as the stepping stone to a better financial system. The news from England is nothing more than what might have been expected; but the idea that the two countries are to be involved in a war about a matter which, in itself, is not a pin's account to either, but which is a proper subject of arbitration for any eminent jurist, is too preposterous to be for a moment entertained. Such, we understand, to be the views of our own government. When this fact is fully understood, the apprehension now felt will speedily subside. The effect of the panic and the indecision of the banks brought operations in the Money Market to very nearly a dead stand. Rates were largely advanced, while many refused to lend upon any terms. A much better feeling, however, was prevailing at the hour of sailing of the steamer, and a considerable proportion of the decline in the Share Market had been recovered.

AMERICAN RAILROAD BOND LIST.

*) signifies that the road is in the hands of receivers. (†) that the company is in default in its interest. "S. F.," Sinking Fund. "var.," that the bonds fall due at different periods

(From the Journal of the Franklin Institute.)

On the Erie Experiments on Steam Expansion by U. S. Naval Engineers.

By SAMUEL MCELROY, C. E.

(Continued from p. 871.)

The per centum of refuse in the coal account varies in each trial. It is as low as 5.75 and as high as 18.53. For one-sixth cut-off it is 5.75, and for eleven-twelfths it is 6.83. The latter is therefore credited with the difference. Having already expressed our opinion of the special accuracy of experiment No. 2, which cuts off at $\frac{1}{3}$th, we need not reiterate obvious objections. It is enough to suggest that if, in experiments as delicately conducted as these, the same boiler work could not be realized in similar kinds of coal, a principle under investigation ought not to be charged with the difference, and also, that it is not perfectly clear that the difference between ashes in weight and that of the coal producing them, represents the absolute evaporative value of the coal. The manner in which the coal is burnt has something to do with that point.

There is a difference of vacuum against No. 2 which we do not find credited.

Experiment No. 7 ($\frac{1}{12}$ths) shows an average back-pressure in the cylinder of 4.2 lbs., while No. 2 shows but 2.8 lbs. In all these trials, it appears that expansion reduces back-pressure by a descending series, except a change in No. 7. But, without accepting this *experimentum crucis* of the condensation argument, the Board decides that back-pressure must be assumed at a common standard, which it accordingly takes at 2.7 lbs. from No. 3. Consequently, the mean pressure of No. 2, which is 13.6 lbs., is to be charged with the standard of 2.7, while that of No. 6, at 29.8 lbs., is credited with the difference between 4.2 and 2.7. This varies the relative horse-power, and is highly creditable to the treatment of the questions at issue.

The Board then enters into a long argument to show that the "net horse-power applied to the water by the paddles" is the only correct basis of calculation of work, rejecting the work which is done by the piston. This involves a difficulty, slight, however, to ingenious men. After the trials are over, they spin the wheels around at various speeds, and determine by indicator cards the exact "pressure due to the friction and resistance" of the organs of the engine, which they establish at the common standard, for all londs and all speeds, of 2.1 lbs. per square inch. The mean pressure of No. 7 bears this charge much more easily than that of No. 2.

In this case, the expansion is charged with the interesting fact that the friction of an engine, and especially an engine paddling water, is constant at all speeds, and under all loads. If the velocity varies in the proportion of 11.17 to 20.61, and the load varies in the proportion of 13.6 to 29.8, the effort is precisely 2.1 lbs. per square inch in each case. It is 15.4 per cent. in one, and 7 in the other. Morin, Weisbach, and others, have therefore been convicted of many "fallacious theories" on this matter of frictional and fluid resistance. Their results are entirely reversed.

And yet, granting all these equivalents, when we reach the last point of calculation, we find that the experimental result in net horse-power for No. 6 is 1,000, and for No. 2 is 1,065. It is not true, then, that it is better to cut-off at $\frac{1}{12}$ths than at $\frac{1}{3}$th, and, by consequence, it is not true that it is still better to follow full stroke. The summary of the report falls to the ground: *vox et præterea nihil*.

But the economy of full steam, we are told, is comprehended in the use of smaller engines, which are to save first cost, space and repairs. In what respect, except as to the bore of the cylinder, is the *Michigan's* engine to be reduced? The wheels, shaft, cranks, and connexions, condenser, air-pump, &c., at one end must retain their present strength and size, and at the other end the boilers must be as large and require as large coal bunkers. In reducing the bore of the cylinder, it would be improper to reduce the side-pipes and valve-chests, and the piston-stroke should not be shortened. Nothing, then, can be saved, except a few pounds of cast iron, a few bolts, and a little wrought iron and rubber. The modified engine will go to sea like one of the fashionable belles denounced in medical journals: the head, arms, and lower limbs fully developed, but the seat of vital action laced and compressed beyond all reason and contrary to natural health. If the Board holds that the friction of an engine is independent of its load, it may also hold that "wear and tear" is equally independent; otherwise the working parts save nothing in repairs or liability to fracture.

Again, we are informed in the report, that the pressure defined by the law of Mariotte, as derived from "abstract considerations," and illustrated by indicator cards, is "so specious, and apparently so conclusive (as a promise of economy in expansion), that up to within the last one or two years, the assumption passed unchallenged by the engineering profession;" but the Erie experiments claim to have overthrown this specious assumption.

We have analyzed these experiments sufficiently to show that, however improper their *modus operandi*, their results do not prove any loss in power. Let us now examine the theory of a loss which is asserted and not demonstrated.

It is asserted that, in the case of full steam travel; as the piston gradually uncovers the surfaces previously exposed to the exhaust, a condensation takes place, so that, at the end of the stroke, the cylinder surface is covered with a film of water at exactly the boiling-point, due to the pressure of its steam charge. When the exhaust valve now opens, this water evaporates, and the value of its heat is lost in the condenser.

When the cut-off is used, the condensation goes on in the same way, except that the film of water condensed before the valve closes commences to evaporate as the pressure falls, and re-evaporation takes place on the surface of the cylinder throughout the stroke, instead of after the return stroke, cooling down the surface during the whole time of expansion movement. This loss is said to be of a very serious character, and, like that due to full travel, must be made up at every new stroke.

This Board is twice mistaken. First, in assuming that engineers have depended on realizing the absolute results of Mariotte's law, without the modifications due to conditions of practice; and second, in assuming the merit of discovering this process of condensation.

The losses due to imperfect combustion and evaporation, foaming, condensation in steam passages, leakage of valves and joints, and back-pressure, certainly have been fully admitted, and are always anticipated. And precisely as far as these may, in practice, modify the results of an absolute law, our confidence in the law itself need not be affected. Imperfections in application, instead of inclining us to this monstrous argument, which would dispense with expansion because some of its benefits are vitiated, should only prompt us to the construction of more perfect machinery, by which the law itself may have a better development. No single portion of this report, no result attained, disproves the correctness of the law, and its whole argument, rightly understood, vindicates expansion against imperfect mechanism, imperfect management, and prejudiced experts.

As long ago as 1782, the master mind of the steam engine, in proposing to cut off at one-quarter, was discussing the effects of this principle of condensation. Since that time, all the way down, engineers have taken ordinary and extraordinary precautions against it. They have built fires under their cylinders, they have placed cylinders within cylinders, they have built around them brick-work houses, they have exhausted the varieties of non-conducting materials, in all kinds of felting and jacketing. There is not anything new, then, in this discovery of condensation, or the apparently neglected operation of external radiation.

Nor is it true that experiments on the assumed losses by condensation are at all novel. The author of the "Precedents" only provoke a smile when he congratulated himself as the first to compare the *tank* with the *indicator*. The idea is not at all patentable.

Nor is it anything of a novelty that comparisons between the tank and indicator should, on account of imperceptible boiler waste, foaming, steam-pipe and cylinder condensation, valve leakage, &c., show a per centage of difference depending on the comparative protections used against these losses. Nobody disputes it. Everybody anticipates it.

So fully, in fact, are engineers advised on this point, that when any experiment is presented to them, no matter by whom conducted, which claims to have found but 2.91 per cent. loss between the tank and indicator, they respectfully deny its accuracy. It is impossible to avoid a greater loss in the boiler itself, and between the boiler and steam-chest, and the valves, as well as in the cylinder. Take the case actually presented. The boiler pressure for experiment No. 6 is 36 lbs., and at the cylinder valve we have 34.9, or a little over 3 per cent. in that item alone. In No. 7, the boiler pressure is 36.9 and the pressure at the valve 34.8 lbs., or 5.7 per cent. less, in this respect alone. No credence whatever, then, can be given to the calculation, which sums up all the losses in $\frac{1}{12}$ths steam travel at 2.91 per cent., finding them for $\frac{4}{12}$ths, 37 per cent. The indicator cards given or experiment No. 6, show a final pressure of 29.3 lbs., whereas, with an initial pressure of 34.8, it should not have been less than 31.9. Here is a loss of 2.6 lbs. to be accounted for, or about 8 per cent., making a total for but two items of all those in force of 11 per cent., which the indicator cannot show. When we turn to the expansion card of No. 2 and No. 7, on the other hand, we find that the final pressure in the first case is 7.8 lbs., when it should not be over 5.71, being 2.09 lbs., or 37 per cent. in excess; in the second case it is 5.9 lbs. instead of 3.02, being 2.88 lbs., or 95 per cent. in excess. This excess the indicator has accounted for, as well as the tank, but the book-keeping of the Erie Board brings expansion still in debt.

Granting, for the moment, the correctness of the theory of condensation we have quoted, as an argument against expansion, when we come to compare it with the losses due to any condition of operation, what is its practical amount? Expanding or not, at every stroke the cylinder surface is exposed to the action of the exhaust, which must be much more formidable than the action of the steam charge, no matter what its conditions. Whatever this loss may be, is it not true that its effect, after the engine has attained uniform action and after the main valve closes, is confined entirely to the particular charge of steam enclosed by the valve in the cylinder; and, inasmuch as *pressure*, *temperature* and *volume*, are rigid measures, one of the other, how can it be denied that the indicator is a correct index of all such effects? As the indicator card does not in reality measure the operation of any given stroke on each side of the piston, but combines the steam travel of one stroke with the exhaust travel of the succeeding one, it is also a measure in any special steam travel of the effects of its precursor; and, until it can be proved that the volume and temperature of the steam charge can be changed without affecting its pressure, pressure must be taken as a direct index of each. We have looked in vain through this report for any postive denial of this principle. At the very close of the elaborate discussion of losses by condensation, it is stated that, "if there be any portion of the stroke during which the steam loses the form of vapor, a dynamic effect measured by that portion and the *wanting pressure*, is lost." It is beyond reason, then, to claim that the indicator will not measure any such "wanting pressure."

This theory of special loss by condensation, in expanding, must be tested by its evidences. Various experiments have been made at different times and by different authorities, with different results. Pambour, on one side, determines a slight loss, while Pole invariably discovers a gain. We have notes of careful experiments on an engine working generally under one-fifteenth cut-off, where the

sum total of all losses is 23.4 per cent. In other cases we have found it 16 per cent. As a matter of testimony by experiment, then, the "data" of the Board must face numerous results by no means "fallacieus," or "specious," or "purely theoretical."

To return to the argument of the indicator cards:—In experiment No. 6, there is a loss in final pressure of 8 per cent., and in back-pressnre, as referred to *mean pressure*, there is a loss of 14 per cent., and of 12 per cent. in *initial pressure*. In experiment No. 2, there is an excess in final pressure of 37 per cent. beyond that due to the initial steam and expansion, while the back-pressure is 20.6 per cent. of the mean pressure, and 8.2 per cent. of the initial. In experiment No. 7, the excess of final pressure is 95 per cent., the back-pressure being 42 per cent. of the mean, and 10.9 per cent. of the initial. Certainly there is no argument in such a state of facts as to losses *in the cylinder* by expansion, but there is a most fatal argument against the parade of accuracy, and perfect machinery, and valves which could not possibly be supposed to *leak*.

The experiments, as to back-pressure, confirm a point of simple demonstration, viz: that the reduction of steam volume per stroke involves a reduction of back-pressure, as referred to initial pressure, and that this item, in comparing similar volumes doing the same work, is not incressed by expansion. All the subtle deductions of the report on this point are incorrect, being disproved by its own results. As to economy of work, it appears that there is an absolute excess of pressure at the highest rate of expansion, and nearly double the final pressure due to the Mariotte law, which is a waste of power and steam to an enormous extent, and is chargeable to leaky valves, being an item of credit to the expansion account. When we remember that in boiler priming the results in waste are formidable against full steam travel; that this matter of condensation as applied to expansion *per se* and compared with other palpable losses, can have but little effect; that the whole course of these experiments tends to prevent the true illustration of economy in expansion, and does not assert the opposite in result; we may well be content to rest the examination of results at this point. If the Erie Board, in expanding $\frac{1}{43}$ths, burned over 6 lbs. of coal per horse-power per hour, we may readily accept the testimony of those engines which, at the same expansion, burn 2 lbs. per horse-power.

A certain mechanical principle underlies and controls the whole question of expansion, although its connexion is not commonly recognized. A principle which belongs to the primitive formations of all engineering theory and is indissolubly united to the very elements of motion. Our allusion to it involves a slight historical discussion.

In the abstract of this report given in the April number of this journal, Watt is credited with the first application of expansion as suggested to him by the announcement of Mariotte's law. The writer is in error in two respects; first, by the fact that Hornblower preceded Watt six years in the application of expansion as a source of economy, and second, that Watt's original application of the cut-off was made in view of the great principle to which we allude, viz: the effect of the *mass of an engine in motion*. Nor is the speculation as to Watt's unpublished experiments on expansion leading him to adopt a steam travel of three-quarters probable, as he made the mistake of the Erie Board and vitiated the results within his reach by using too low pressure. He proposed in 1782 to cut off at one-quarter. Trevithick in 1806 apprehended the question of economy much more fully, using steam at 40 lbs., and proposing to build an engine to cut off at less than one-sixth. And since that time, the whole Cornish school, instead of confining itself to this standard, has carried the grade of expansion in some cases to one-twentieth, not for purposes of experiment, but for regular duty. It is a very great mistake to suppose or to assert that, "until quite recently, it was the exception, and not the rule, to find new engines cutting off at less than one-half."

But without pausing here to sustain a very simple matter of record, we refer again to the fact, that when the genius of Watt superseded the *atmospheric* engine and used steam as a driving power, it also comprehended an inevitable law of motion, which demanded the application of the cut-off as a mechanical necessity, in advance of any idea of economy. We take an impregnable position, then, based on absolute principles, when we assert that the cut-off is an appurtenance which bears to every engine in full motion a relationship entirely independent of any question of economy, although this is a natural sequence, and that the idea of assuming full steam travel as a basis of comparative mechanical action is a misapprehension of engine duty.

The argument on this point is sufficiently clear in reference to all bodies in motion which have weight. To overcome the inertia of an engine, a certain surplus pressure must be applied to the piston, which corresponds with initial pressure, and is exceeded at no after point of the stroke. The mass being thus put in motion by charging it with surplus power, it is a mechanical absurdity to continue the initial pressure any farther than will suffice to complete the stroke by virtue of the surplus power imparted at the commencement. In the general application of this law, there is no distinction between single-acting and fly-wheel engines; mass in motion characterizes both.

It is an absolute necessity, then, in every engine, that the power necessary to complete its stroke properly, must be imparted to it in excess at an early period of such stroke; and inasmuch as the whole experience of the steam engine in practice abundantly confirms the theoretical conclusion that this surplus power may be exerted at a very early point of motion, this disposes of the expansion question, not only as to mechanical effect, but as to economy. For all the fine drawn arguments on condensation and re-condensation are of very little consequence to the mass which is by this time distributing its excess of power.

Viewed in this light, the doctrine of expansion divests itself of all incumbrances. We come back again to the principle of maximum useful effect. There is a given velocity to be imparted to a given load at the start. If a steam travel of four feet under ten pounds pressure will do it, who is to assert that a travel of one foot under forty pounds pressure will not do it equally well, better in fact, and much more cheaply? No experimental philosophy can prevail against a plain mechanical law like this, and certainly no such experiments as those we have here discussed. On the contrary, the most extensive, severe, laborious research, by the first men of the age, has brought out this law "seven times refined" for the benefit of the world. So long as we know that the maximum velocity of motion can be imparted to an engine before it reaches the half-stroke, we decide the fallacy of any argument which prescribes any later point of cut-off; and we also decide that the only limit to economy of steam by expansion, is to be determined by the practicable conditions of such initial motion, and the practicable perfection of construction.

Finances of Wisconsin.

The annexed report of the Treasurer of Wisconsin shows the operations of his department, for the year ending Sept. 30, 1860, to be as follows:

The balance in the general fund at the commencement of the fiscal year was	$39,045 46
The total receipts into the general fund, from all sources during the fiscal year, amount to	405,246 68
Making a total of	$444,292 14
The total disbursements during the year amount to	377,183 27
Leaving a balance on hand on the last day of the fiscal year of	$67,109 87

The receipts and disbursements of the war fund were:

Receipts	$818,758 56
Disbursements	791,875 92
Balance Sept. 30, 1861	$26,882 64

The entire receipts and disbursements of the State were:

Receipts	$1,869,488 68
Disbursements	1,625,555 12
Balance Sept. 30, 1861	$243,933 56

The amount of bonds issued under authority of the law, enacted by the Legislature of Wisconsin at its extra session was as follows:

1,000 bonds of the denomination of $100 each, redeemable on the 1st day of July, 1877, making	$100,000
200 bonds of the denomination of $500 each, redeemable on the first day of July, 1878, making	100,000
800 bonds of the denomination of $1,000 each, redeemable $100,000 on the first day of July, in the years 1879, 1880, 1881, 1882, 1883, 1884, 1885 and 1886, making	800,000
Total	$1,000,000

Of this issue there has been sold as follows:

5 bonds of $100 each	$500
90 " $500 "	31,920
794 " $1,000 "	555,800
Total	$588,220

Leaving now on hand:

188 bonds $1,000 of the five years' issue	$188,000
6 " $1,000 redeemable in the year 1879	6,000
110 " $500 redeemable in the year 1878	55,000
995 " $100 redeemable in the year 1877	99,500
Total	$348,500

Railroad Earnings--Monthly.

The earnings of the Toledo and Wabash Railroad for November, 1861, were | $77,599 32
Do., 1860 | 137,085 99
Increase | $59,486 67

The earnings of the La Crosse and Milwaukee Railroad in November, 1861, were | $116,935 68
Do., 1860 | 95,816 25
Increase | $21,119 43

The earnings of the Milwaukee and Prairie du Chien Railroad, for Nov., 1861, were | $130,114 04
Do., 1860 | 90,899 96
Increase | $39,214 08

The earnings of the Erie Railroad for the month of November, 1861, were | $734,826 10
Do. 1860 | 554,532 25
Increase | $180,293 85

The business of the Cleveland and Mahoning Railroad for November was as follows:

Passengers	$5,356 21
Freight	8,866 87
Coal	17,367 34
Ore	2,687 52
Mail	418 75
Gross earnings	$34,696 69
Expenses	12,678 95
Net earnings	$22,017 74

The business on the Buffalo and State Line road shows a very favorable result in November. The earnings were about | $120,000
Expenses | 45,000
Balance | $74,500

These figures show a net increase on the earnings of 1860 of $38,000. The net earnings of October and November were..... $144,000
Interest, 2 mos., on funded debt 14,000

Net earnings, applicable to dividend on $2,150,000 stock $130,000

Railroad Earnings--Weekly.

The earnings of the St. Louis, Alton and Chicago Railroad for the 1st week in Dec., were:

	1861.	1860.
Passengers	$5,614 55	$6,587 60
Freight	11,553 00	12,529 64
Sundries	815 33	858 83
Total	$17,982 88	$19,976 07
Total this month to date	$17,982 88	$19,976 07
Total since Jan., 1st	941,109 07	894,134 32

The earnings of the Toledo, Wabash and Western Railroad the 1st week in December, 1861, were..... $22,541 53
Do. 1860..... 11,679 36

Increase..... $10,862 19

The receipts of the Chicago and Northwestern Railroad for the 1st week of December, 1861, were..... $13,617 07
Do. 1860..... 13,562 93

Increase..... $51 10

The Milwaukee and Prairie du Chien Railroad earned for the 1st week in Dec., 1861. $18,628 80
Do., 1860..... 10,137 49

Increase..... $8,491 31

The traffic of the Great Western Railway of Canada for the week ending Dec. 13, 1861, was as follows:

Passenger..... $14,544 70
Freight and live stock..... 36,926 05
Mails and sundries..... 1,329 65

Total..... $52,800 40
Corresponding week of last year..... 40,661 23

Increase..... $12,139 17

The Cleveland and Toledo Railroad earned the 2d week in December, 1861..... $24,853
Do., 1860..... 20,649

Increase..... $4,204

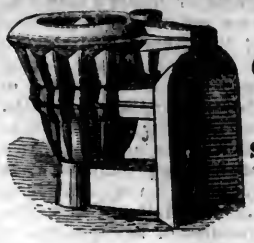
The Rock Island Railroad earned the 2d week in December, 1861..... $25,117
Do., 1860..... 15,201

Increase..... $9,916

The Buffalo, New York and Erie Railroad Company earned, the first twelve days in December, 1861..... $30,041 24
Do., 1860..... 17,447 40

Increase..... $12,593 84

The receipts of the Grand Trunk Railway of Canada for the week ending Dec. 7, were..... $96,950 59
Corresponding week, 1860..... 70,841 24



Increase in 1861..... $26,109 35
Total traffic from July 1st, 1861... $1,695,811 43
Corresponding period previous year. 1,596,496 69

Increase..... $99,314 74

The earnings of the Galena and Chicago Railroad for the second week of December were:

1861..... $26,543
1860..... 19,023

Increase..... $7,520

Sanford's CHALLENGE HEATERS SET IN BRICK, PORTABLE OR AS FIRE PLACE HEATERS,

FOR WARMING BY ONE FIRE WITH PURE, SOFT AIR
Dwellings, Churches, Hotels, Public Halls, Railroad Depots, Vessels, etc.,
WITH AND WITHOUT REGISTERS.
THE MOST POWERFUL HEATERS AND THE
Greatest Fuel Savers in the World:
With an unparalleled mass of unimpeachable testimony of well-known Citizens, Ministers, Doctors, Lawyers, Merchants, Mechanics and others.

Send for pamphlet containing full description and testimonials.

SANFORD, TRUSLOW & CO.,
Nos. 239 and 241 Water st., N. Y.

PASCAL IRON WORKS,
ESTABLISHED 1821.
MORRIS, TASKER & CO.,
MANUFACTURERS OF

Lap-Welded American Charcoal Iron Boiler Flues—from 1¼ to 10 inches outside diameter, cut to definite lengths.

Wrought Iron Welded Tubes—from ⅛ inch to 8 inches inside diameter, with screw and socket connections, for Steam, Gas, Water or other purposes; also, fittings of every kind to suit the same.

Wrought Iron Galvanized Tube—strong and durable, designed especially for water purposes.

Cast Iron Gas or Water Pipe—1¼ to 24 inches in diameter, and branches for same, etc.

Gas Works Castings, etc., etc.

PHILADELPHIA.

LOCOMOTIVE FOR SALE.

SMALL second hand Locomotive, usual gauge (4ft. 8½ in.) Weight, 10 tons—Drivers, 4ft. 6in.—Cylinders 10x18 in. Fire-box, Crank and Tires nearly new, and the whole engine in excellent condition.
Also a second hand "Bradly" Snow Plow.
For sale low by
WILLIAMS & PAGE,
51 Boston.

OFFICE OF THE ILLINOIS CENTRAL R. R. Co., New York, Dec. 5, 1861.

AT a meeting of the Board of Directors of the ILLINOIS CENTRAL RAILROAD COMPANY, held at their office in New York this day, it was

Resolved, That an assessment of FIVE DOLLARS per share upon the Scrip Shares of the Capital Stock of the Company, be and the same is hereby called payable on the twentieth of January, 1862; and that the same be payable on the Stock registered in the City of New York at the office of the Company in that city; and on the Stock registered in London at the office of Messrs. ROBERT BENSON & Co., London; and that parties desiring to pay their assessment in London, may pay the same at a rate of exchange sufficient to produce five dollars per share to the Company in the City of New York.

Resolved, That the transfer books be closed on the afternoon of the 15th January next, and re-opened on the 20th day of the same month; and that no transfer be permitted, on or after that day, of shares upon which the foregoing assessment shall not have been paid.

THOMAS E. WALKER, Treasurer.

The eighty-dollar certificates to be returned on payment of the above.

OFFICE OF THE ILLINOIS CENTRAL R. R. Co., New York, Oct. 29, 1861.

HOLDERS of the stock of this Company, as registered upon the books of the company at the close of business on the 15th day of January, 1862, will be entitled to Canceled Bonds Scrip for five dollars upon each share of stock held by them deliverable on or after the 1st day of February next; and parties holding certificates are hereby notified to have the same registered in their own names on or before the said 15th day of January. 48

SANFORD'S MAMMOTH OR GLOBE HEATERS.

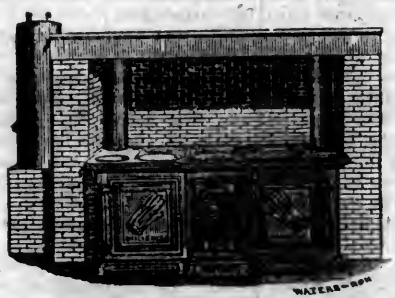
The best stoves for RAILROAD DEPOTS and SHOPS, and all places where a great heat is required. They are very durable, and very economical of coal.

Beware of imitations that are inferior in strength and in other respects.

TESTIMONIALS.

HUDSON RIVER RAILROAD OFFICE, N. Y
This Company have now in use, over two hundred of Sanford's Mammoth Heaters, in Station Houses, Work Shops, and Engine Houses; we commenced using them in 1853, and some of the first stoves put up are still good and in use. We consider them the best Heaters now in use.
J. M. HEBARD, Supply Agent.

UNION FERRY COMPANY.
The Mammoth Heaters have been used by this Company in their waiting rooms at the several ferries and found to be very excellent stoves and more durable and valuable than any heretofore used. CYRUS P. SMITH, Managing Director.



MANUFACTURED AND SOLD BY
SANFORD, TRUSLOW & CO.,
Nos. 239 and 241 Water street, New York,

The COSMOPOLITE PARLOR RADIATOR, & GAS BURNER,

Introduced one year ago, already ranks as the **LEADING STOVE** for PARLORS, SITTING ROOMS, and all places where a soft, pleasant heat is desired.
Fire may be kept all winter with an astonishingly small supply of coal.
Send for description and testimonials.

SANFORD, TRUSLOW & CO.,
Nos. 239 and 241 Water st., N. Y.

Challenge Air-tight KITCHEN RANGES,

May be placed in a fire-place without masonry, and with or without water-back; or may be set out on feet, as an ordinary stove.
This range, already very popular, has the **LARGEST OVEN** of any in the market; BAKES PERFECTLY, never failing to brown at the bottom; BOILS, ROASTS and and BROILS with unequalled facility and dispatch, and with extraordinary **ECONOMY OF FUEL**, which may be either coal or wood. Flues large and easily cleaned. A child can manage it, so simple is its construction. Castings extra heavy, and design plain and chaste.
Four sizes, adapted to families and hotels.

Beacon Light SUMMER AND WINTER PORTABLE RANGE,

Is a very popular range, having six boiler holes, one large oven that bakes perfectly, with an arrangement for roasting, or heating irons at the end. It is very economical of fuel. For a FEW DOLLARS a family may be supplied with a PERFECT COOKING APPARATUS, equal to the highest price stove in the market.
Three sizes, adapted to coal, or wood.

Financial Condition and probable policy of Government.

While the wants of government, so far, have been abundantly supplied by the Banks; it is probable that a radical change in its financial poli- will soon be adopted; and that it will henceforth resort largely to taxation, in its various forms of import, excise and direct taxes, instead of loans. Such a step is at once necessary to provide all the money that is needed, as well as to give credit to such loans as the government may from time to time be compelled to negotiate. As an evidence of the position which the Banks will probably assume, we copy the following remarks from the Circular of Samuel Hallett & Co., which is understood to express the views of our leading Bankers.

The conferences between Mr. Secretary Chase and the banks, the past week, led to no results, except the adjustment of some minor matters, growing out of past negotiations. The future was left untouched by tacit consent of both sides. Very probably both were waiting future developments. The banks are promptly paying up the third $50,000,000, which Mr. Chase assured them would place the treasury in a position of entire ease until the 10th or 15th of January. The wants of the Government may be met, we presume, some time longer by the issue of the balance of the $50,000,000 demand treasury notes yet on hand.

With regard to the future, we presume that Congress will take immediate steps to increase the annual revenues from ordinary and extraordinary sources, to at least $150,000,000. Upon the passage of laws to this effect, treasury notes equal to the probable revenues, and receivable for Government dues, could be issued. which would be readily taken, and pass as money. In this way the incoming taxes and impost and excise duties could be drawn against, and the Government placed immediately in funds to an equal amount. The wants of the Government being in this way fully provided for, for some months to come, ample time would be given for the negotiation of new loans, which, during the year, could probably be effected to an amount equal to the wants of Government, over and above that derived from direct taxation and impost and excise duties. There need be no difficulty about money, with an adequate system of finance. This must provide a sum sufficient for all the ordinary wants of Government, a portion of its extraordinary wants, and the interest on its debt The credit created upon such a basis would enable the Government to raise all the money it needed at fair rates. Mr. Chase's currency scheme will not, we presume, be pressed. The necessary effect of the adoption of such a measure is fully considered in a letter addressed to him, and which we publish elsewhere. We presume that the associated banks will immediately unite in a representation to him, urging the adoption of a comprehensive system of taxation. Upon its adoption, they will be enabled to continue their efficient co-operation in providing Government with money. The demand notes already issued are now treated by the banks as money, for the reason that they are promptly redeemed in specie. If provision be made for the absorption of further issues, by making them receivable in discharging public dues, such provision will make them precisely as current as if payable in specie, if a proper relation were always maintained between the amount of such issues and the sources of income against which they are drawn. The people will readily take what they can use in discharging their obligations; and banks need not have any fear of being overloaded by Government promises, when these never exceed at any one time the reciprocal obligations of the people. The whole measure, we presume, implies the suspension of specie payments both by the banks and Government.

Buffalo, New York and Erie Railroad.

We have received the Third Annual Report of this company for the fiscal year ending September 30, 1861, from which we learn that the receipts during that time were:

From passengers	$128 552 22
" freight	439.102 55
" mails	8 032 56
" express	7.860 50
" Rochester division	4 996 14
" other sources	5.300 05
	$593,844 02

And the expenses were:

Operating road	$180 256 71	
Maintaining road	150,526 72	
Repairs of machinery	75,356 60	
		406,140 03
Net earnings, (31.60 per cent.)		$187,701 59
Add balance Oct. 1, 1860		224,732 36
		$412,436 95
Paid coupons and inter't.	$163,324 31	
" stock dividends	170,000 00	
		333,324 31
Balance Sept. 30, 1861		$79,112 64

Compared with the previous report, the gross earnings show an increase of $13 844 09
With an increase in expenses of 69,093 90
Making the reduction in net earnings $55,249 81

The increase in earnings was derived wholly from eastward bound freights, which amounted to 145,870 tons, being an increase of 15,376 tons over the tonnage transported eastward the previous year. The westward bound freights amounted to 91,539 tons—a decrease of 5,680 tons. The number of through passengers carried was 23,509—an increase of 575; the number of local passengers, 157,000—a decrease of 30,652. The decrease in the local travel is accounted for, principally, from the great numbers transported to and from political gatherings in the previous year. It is apparent, however, that both the local travel and westward bound freights have been much effected by the existing war. A gradual revival of this business is now apparent, giving indications of a return to its accustomed activity.

Included in the above expenditures is the sum of $50,000 for re-constructing a portion of the track, which has been furnished with new rails,

spikes, chairs and ties, and may be classed as extraordinary expenses. Over 900 tons of rails were used for this purpose. There have been 1,607 tons of old rails repaired at the various shops of the company, and used in ordinary repairs of track; 56 tons of new chairs, 52,330 pounds of spike, and 57,446 new ties, have been used in construction and repairs during the year. This, together with extensive improvements made in the road-bed, and extraordinary repairs of rolling stock, will fully account for the increase in expenditures. Upon the subject of substituting coal for wood-burning engines, the report says:

The attention of the directors has heretofore been called to the gradually increasing price of wood for fuel, and the increased difficulty of obtaining a full supply at particular points on the road where a large quantity is needed at all times. The experience of other companies has demonstrated, to a reasonable degree of certainty, that coal can be used on locomotive engines quite as satisfactorily as wood, and at much less expense. It was determined, therefore, to make the experiment on this road. Two engines, used for switching and local business at Buffalo, were changed so as to admit of burning coal in February, 1861, and were found to work satisfactorily. Since that time, two freight and three passengers engines have been changed, and are now run entirely with coal. A careful account has been kept of quantities of coal consumed by the passenger engines; and it is demonstrated that a large saving is made to the company. The average quantity of coal used for each run from Buffalo to Corning and return, 284 miles, is 6,150 pounds, or 21.65 pounds, per mile run. The coal is obtained at Corning from the Blossburg mines, and is delivered to the company at a cost of $2.50 per ton of 2,000 lbs., or ⅛ of one per cent. per pound, making a total cost of $7.68¾ for 284 miles. The average cost of wood used on passenger engines for the same distance is $15.20, or 5 35-100 cents per mile, which shows a net saving to the company of $7.51 for each round trip performed. This would be equal to a saving of $1,100 per year for each engine constantly in use. If further experience shall show the same diminution of expenses by the use of coal, which is now apparently established, and the engines are found uninjured by its use, economy and sound policy would seem to require its exclusive use on the road. The Blossburg coal mines being situated near the Eastern terminus of the road, a constant supply at low prices can always be obtained. There are other considerations favoring the use of coal, independently of the reduction of expenses for fuel consumed. Large losses are sustained by the decay of wood when piled together in large quantities, by thefts from the company's grounds, and by occasional fires. There is also a saving of time by the use of coal, equal on a single trip to one hour for freight, and half an hour for passenger trains. The total cost of changing from a wood to a coal-burner is less than $150 per engine. The coal-burning engines used on freight trains have not been employed a sufficient time to give accurate results of their operation. It is confidently expected that they will give satisfaction, and show a large saving in cost of fuel, but probably not as large a per centage as the passenger engines.

The coal traffic from Pennsylvania to the West, and North-West, noticed in former reports, is steadily increasing. The quantity transported by the company during the year was 45,559 tons, being an increase of 10,000 tons over the previous year. A much larger quantity would have been moved but for the occurrence of the war, which checked manufacturing operations in the Western States, and by so much diminished the extent of the demand. This class of freight is necessarily taken at lower rates than are charged for other classes, but is an important auxiliary to the general business of the company. It is taken on return cars, which would otherwise be drawn empty, and free from all expenses of loading or discharging, or agency charges for obtaining and superintending. Incidentally, this business tends to the advantage of the company in fostering and aiding manufacturing establishments at Rochester, Buffalo, and other points on the line. These, in return, contribute to the general business of the company.

The equipment of the road consists of 28 locomotives; 26 first class, 6 second class, 9 baggage and mail, and 393 freight cars. Very extensive improvements have been made in the locomotive and car departments, which were rendered necessary by the increasing freight traffic. The motive power of the company is now in good working condition. During the year 714 new car wheels have been used; 4 first class and 3 second class passenger and one baggage car have been thoroughly rebuilt and re-furnished; 38 body cars were rebuilt; 36 new outside bearing trucks constructed; new roofs put on 72 cars, and the entire rolling stock of the company has had general repairs.

No liabilities have been incurred for damages to persons; and the amount paid for damage to property, etc., has been less than $2,500.

The number of miles run by passenger trains has been 182,016; by freight trains, 264,635; by working trains, 36,761—total miles run, 483,412.

The importance of a direct connection at Elmira with the railroad lines to Baltimore and Philadelphia is again alluded to. The experience of the past year affords additional evidence of the importance of this connection.

BALANCES OF THE GENERAL LEDGER SEPTEMBER 30, 1861.

Treasurer—GILBERT CAMERON.

Secretary—WILLIAM F. MILLER.

Bellefontaine Railroad Line.

INDIANAPOLIS, PITTSBURG & CLEVELAND R. R.

The Indianapolis, Pittsburg and Cleveland Railroad Company was chartered under the name of "Indianapolis and Bellefontaine Railroad Company," on the 16th January, 1848, and organized on the 3d July of the same year. In October following the first division of the line extending from Indianapolis to Pendleton 26.4 miles was commenced, and the remainder consisting of two other divisions—the second extending from Pendleton to Muncie 26.4 miles, and the third extending thence to Union City, 29.97 miles—was placed under contract during the succeeding year. The first division was completed by the middle of October and formally opened on the 11th December, 1850. The second division was completed by sections—to Anderson 36.2 miles from Indianapolis, on the 26th July, 1851, to Chesterfield 42.51 miles on the 9th October of the same year, and to Muncie, 52.8 miles on the 17th June, 1852. The third division was opened to Winchester 74.3 miles from Indianapolis on the 17th October, 1852, and to Union City, 82.77 miles, on the 1st January, 1853. The Bellefontaine and Indiana Railroad was completed to a junction with the road of this company on the 12th July, 1853. These roads are now operated as a single line under the title of the "Bellefontaine Line." The contract for the purpose was concluded on the 1st April, 1856. Under this contract the rolling stock of the two companies was by inventory and appraisement thrown into a common stock, and the expenses of keeping up this stock and operating the roads are divided *pro rata* according to the length of line owned by each company. The roads are kept in repair by the separate companies, and each road receives the full benefit of its own receipts. The operating and financial departments are placed under the exclusive control of an executive committee composed of two members of the board of directors of each company and the President of the Bellefontaine and Indiana Railroad Company. The respective organizations of the two companies remain distinct and separate as before.

The capital stock authorized was $1,000,000, in 40,000 $25 shares; paid in $835,971, in 20,899 shares.

The funded debt of the company January 1, 1861, amounted to $1,023,400: classified as follows:

1st mortgage 7 per cent. coupon bonds, $300,000—issued 1st January, 1850, and payable, principal 1st January, 1860 (extended to 1870), and coupons semi-annually 1st January and 1st July in the city of New York. These bonds are secured by a first mortgage on the road between Indianapolis and Anderson.

1st mortgage 7 per cent. coupon bonds, $150,000—issued 1st January, 1851, and payable principal 1st January, 1861 (extended to 1871), and

coupons semi-annually 1st January and 1st July in the city of New York. These bonds are secured by a first mortgage on the road between Anderson and Muncie, and also by a second mortgage on the road between Indianapolis and Anderson.

1st mortgage 7 per cent. coupon bonds, $200,000—issued 1st January, 1852, and payable, principal 1st January, 1862, (extended to 1872) and coupons semi-annually 1st January and 1st July in the city of New York. These bonds are secured by a first mortgage on the road between Muncie and Union City, 30 miles, by a second mortgage on the road between Anderson and Muncie, and by a third mortgage on the road between Anderson and Indianapolis.

2d mortgage 7 per cent. coupon bonds, $314,000—issued 1st October, 1855, and payable, principal 1st October, 1870, and coupons semi-annually 1st October and 1st April in the city of New York. These bonds are secured by a mortgage on the whole road taking precedence after all mortgages made at anterior dates, and by a first mortgage on the rolling stock, depot grounds, buildings, etc. The 1st mortgage bonds heretofore recited were issued before the road was constructed and covered only the track of the road. Amount authorized $400,000.

Income 7 per cent. bonds, $27,000.

Domestic 7 per cent. bonds, $324,000.

Under the 1st mortgage bonds extension agreement (1860) a sinking fund for their redemption was established, to which $10,000 was to be paid to the trustee on the 1st November, 1860, for the redemption of the bonds issued 1st January, 1850; $7,500 on the 1st May, 1861, and $7,500 on the 1st November, 1861, for the redemption of the bonds issued 1st January, 1850, and 1st January, 1851, *pro rata*, and thereafter $20,000 a year in equal semi-annual payments, viz. on the 1st May and 1st November for the redemption of the 1st mortgage bonds collectively. These sums are to be invested in the purchase of said bonds at a price not exceeding their par value, and the interest on such purchased bonds to be added to the fund and invested in the same manner. This fund would purchase the whole debt at par in 20 years.

The floating debt of the company was $37,219, viz: bills payable $20,611, and sundry accounts, $16,608. Cost of road and equipment, $1,837,955.

Jurisdiction of State Courts over the U. S.

SOVEREIGNTY OF THE UNITED STATES: NOT ANALOGOUS TO ENGLISH SOVEREIGNTY: MAY BE MADE DEFENDANT IN A STATE COURT IN A FORECLOSURE SUIT.

A bill was recently issued out of the United States Circuit Court for the redemption of a mortgage of a lot of land near Hoboken, New Jersey. The respondents Van Voorst and others claimed under a judicial sale of the property, under a decree of the court of Chancery of New Jersey, in a bill, to foreclose the same mortgage.

Van Voorst was the original owner of the land, which at that time was unproductive, and possessed but a speculative value, from anticipation of future demand for town lots. On the 15th of October, 1836, he sold his lot to one Innis, who reconveyed it, on the same day, by way of mortgage, to secure a balance of the purchase money. In the same year Innis conveyed his equity of redemption to Samuel Swartwout, collector of the port of New York. In 1839, Swartwout became a defaulter to government, and a warrant of distress was issued by the solicitor of the treasury against him. Among other things, this lot of land was seized, and sold on the warrant. It was bid in for the United States, and a deed made to them by the Marshall. In 1847, the solicitor of the treasury conveyed it to one Corcoran, who, in 1858, conveyed it to complainant.

The mortgage to Van Voorst was payable in five years from date, with lawful interest, payable semi-annually, with provision that if at any time the interest should be behind and unpaid for the space of thirty days, then the whole, principal and interest, should become due and payable. Neither principal nor interest having been paid, and the land being vacant and unproductive, and the only remedy left to the mortgagee being a sale of the land under his mortgage, he filed his bill in the Court of Chancery of New Jersey to have his mortgage foreclosed, and the land sold to satisfy the debt due on the mortgage.

The bill set forth that the United States had become owner of the equity of redemption and prayed that a notice or subpœna might issue to James S. Green, Esq., Attorney of the United States for New Jersey District, that he answer in behalf of the United States and show any defence against the prayer of the bill. Accordingly, the District Attorney appeared and filed an answer, admitting the charges of the bill and submitting to the court to take care of the interest of the United States, in the mortgaged premises. The Court of Chancery thereupon adjudged that the mortgage money and interest was due and unpaid, and ordered, "that so much of the mortgaged premises as will be sufficient to raise and satisfy the debt, interest and costs, be sold, and that a writ of *fieri facias* do issue for that purpose, and that defendants be debarred and foreclosed from all equity of redemption." On this decree *fi. fa.* was issued, and the premises sold and conveyed by the sheriff to Van Voorst in November, 1840.

The land being wholly unproductive and without buildings or improvements Van Voorst laid it out in town lots, and sold the same at different times to persons, nearly all respondents in this case, who have entered, built and made improvements greatly increasing the value of the land.

The question then presented for the decision of the court, was whether the judicial sale by the

court of Chancery of New Jersey, to satisfy or foreclose the mortgage was valid. The complaints contended that it was void, because the United States, being a sovereign, could not be sued in the State Court of New Jersey. The following is the opinion of the court, delivered at the decision of the case.

GRIER J.—It is undoubtedly true that no action can be sustained against the Government of the United States for any supposed debt or claim unless by its own consent or some special statute allowing it.

The sovereign himself being the source of justice and power, exercising the same through his courts, is always presumed to be ready to do justice. It is, therefore, part of his prerogative that he cannot be sued in his own courts. Nevertheless the subject was entitled when he claims anything from the crown to have his "petition of right." Upon such petition the crown ordinarily directs that right be done to the party, and the petition is then referred to the chancellor to be executed according to law, and directions are given that the attorney general be made a party to the suit. In other cases where the crown is not in possession and its rights are only incidentally concerned, it is generally considered that the attorney general may be made a party in respects of these rights, and the practice has been accordingly. In the United States the proceeding by petition of right is unknown. The Government of the United States, though limited in its powers, is supreme in its sphere of action. But its right as a sovereign and its prerogatives as such are co-extensive with the functions of government committed to them and no farther. Its position as to prerogative is anomalous owing to our peculiar institutions.

It is part of the functions committed to this government to build forts, arsenals, navy yards, etc., etc. It may purchase and hold land for these purposes, yet it cannot exercise exclusive legislation over such lands, although used for national purposes, without the consent of the Legislature of the State where the land lies. A State has no power by taxation or otherwise to retard, impede, burthen, or control the operation of the constitutional laws passed by Congress to carry into effect powers vested in the National Government. Hence she may not have power to tax navy yards or other property of the United States held within its bounds for public or national uses. But it does not follow that when the Government officers purchase land in the name of the United States to secure a debt, as any individual or private corporation might do, that it thus ousts the jurisdiction of the State to tax it, or in any manner affects the liens or rights of mortgagees in such lands. In the mere exercise of a corporate right, the Government of the United States cannot claim the prerogatives or immunities of a sovereign, she cannot compel a mortgagee to the hopeless remedy of a petition to Congress to redeem.

The courts of New Jersey cannot thus be ousted of their jurisdiction and duty to assist the mortgagee to have his mortgage satisfied and the mortgaged premises sold for that purpose. When the Government in the exercise of the rights and functions of a civil corporation purchases lands to secure a debt, the accident of its sovereignty in other functions cannot be set up to destroy or affect the rights of persons claiming a title or lien on the same lands. Thus, when the Government of the United States became a partner in a trading corporation, such as the United States Bank, it divested itself, so far as concerned transactions of that company, of its sovereign character, and took that of a citizen; consequently, its property and interests were subject to the decrees and judgments of courts, equally with that of its copartners.

When Van Voorst came into the Court of Chancery, he had a clear right to have the mortgaged lands sold to satisfy his mortgage. The court was bound to furnish him a remedy. The land mortgaged was within the jurisdiction of the court. The only difficulty in the case was, that the title of the mortgagor, who should be made a party to the proceeding and have an opportunity to show that lien was paid or discharged, was vested in the United States, *quoad hoc*, a foreign corporation, and not within the jurisdiction of the court. It could not be compelled to appear or submit itself to such jurisdiction, so neither could any non-resident individual or corporation. The usual way to warn such absent parties is by advertisement. When such absentee does not choose to come in voluntarily and appear and make defence, he is made a party without his knowledge or consent. The jurisdiction of the court over the land decreed to be sold, is sufficient to justify the decree and validate the sale, as regards the property sold, but no decree could be made against the person not within the jurisdiction, that could bind him or be regarded as valid in another tribunal. In this case, the Court of Chancery of New Jersey had jurisdiction over the thing or land mortgaged; it could not compel the United States government to appear and submit itself to the judgment, or render any judgment that it should pay money; but it can prescribe what notice should be given to the mortgagor or owner of the equity of redemption, and how it should be given. In analogy to the proceedings in the Court of Chancery in England, it was ordered that the subpœna be served on the representative of the Government, who *quoad hoc* might be treated as the attorney-general. The attorney appeared and answered on behalf of the Government. The presumption is that he was duly authorized so to do. Through him the Government had notice and might redeem if it saw fit. The decree demanded nothing of the United States. It is only for a sale of the mortgaged premises, to satisfy a legal lien. After thus refusing to redeem, after full notice, the Government ought to be estopped. Its vendee, with full notice of this judicial sale, has no equity—nor should he now be allowed to wrong *bona fide* purchasers under the cover of the sovereign prerogatives of the United States.

I am of opinion, therefore, that the Court of Chancery of New Jersey had jurisdiction to effect a sale of these mortgaged premises, in satisfaction of the lien; that its decree and the sale under it, are not void for want of jurisdiction—and that their regularity cannot be called in question in a collateral suit. If irregular and erroneous the decree might have been set aside on writ of error.

It may be said there is no precedent in this country for precisely such a case as that before the chancellor. The answer to this may properly be, "It is time there was one."

Bill dismissed, with costs.

The National Finances,

We give below the following communication from a well known gentleman at the head of one of our leading Banking Institutions:

NEW YORK, Dec. 24, 1861.

MOSES TAYLOR, Esq.,

Chairman Loan Committee:

When the Associated Banks undertook to supply Government with means to sustain its existence, the disaster at Bull's Run had placed the whole country in peril. Washingtou was in immediate danger of capture; Baltimore was of doubtful loyalty, and several large States now true to the Union, were then ready to cast their influence into the preponderating scale. Congress had adjourned after binding the Secretary of the Treasury by law, to obtain money at a minimum rate, and there was no resort left but the issue of paper money, based upon the faith and future resources of a country discouraged, distracted, and whose future was shrouded in gloom.

The Banks in New York, Boston, and Philadelphia, then came forward and voluntarily pledged themselves in front of this danger, by uniting together and originating a plan by which the requisite means were immediately supplied. The courage and confidence of the people were restored, an Army and Navy were created, and have been since paid and sustained, the military power and resources of the North have been developed on a specie basis in the most economical manner, and we now present to the world the unparalleled spectacle of a free people possessing an efficient military and naval force ready for action, hardly inferior to the first monarchy of the world, created without the least compulsion of Government, by the willing offering of the people themselves.

In thus advancing their means, the Banks were not moved by the desire of gain. On the contrary they departed from their legitimate functions, and simply undertook to provide for the pressing exigency of the day, until Congress could be again convened for further legislation, and until the Capital of the country, of which they represented but a small part, could come forward and fairly participate with them in the movement. The Banks never intended to be other than the medium between the people and the Government, immediately supplying the money of the *few*, whom they represented, until that of the *many* could be gathered up.

They have now advanced	$140,000,000
and have received back in reimbursement of sales to the public about	38,000,000
leaving them now in advance	$72,000,000

And they have agreed to advance about Thirty Millions more, which at this moment is the whole of their undertaking.

In fact, so regularly have the Banks responded to the vast expenditures of Government, that tne people of the North are utterly unconscious of any unusual demand upon their resources, and are not alive to the duties and dangers which surround them.

Meantime some four months have passed away during which it was confidently believed that more important military results would have been achieved, and such progress made in suppressing the rebellion, as to inspire renewed confidence in the value and stability of our Government Loans. As the public expectation in this respect has not been realized, the subscriptions to the Loan have greatly diminished. Seeing this the Associated Banks determined to take the last Fifty Millions in the form of Bonds suitable for the European market, by which they expected at least to be able to effect a Loan in Europe, should the state of Exchanges render it desirable. The recent excitement growing ont of the affair of the "*Trent*," has rendered that resource quite unreliable.

In the meantime, by the consequently increased expansion of Banks in the City of New York, and by the diminution of our foreign commerce, the exchanges are turning more favorably to the West. whether our coin is continually tending, and that which we now pay into the Sub-Treasury on the Government Loans, you will observe, does not return to our Vaults, as hitherto. At the same time Boston, (from the fact that she is the financial center of New England, whose industry supplies a larger proportion of the wants of our Army, and also because that City did not take its full pro portion of the Government Loans,) is rapidly gaining upon us in her Coin reserve

It may therefore be wise to inquire, whither are we tending?

Under such circumstances, ought the Associated Banks to agree to advance on the next Fifty Millions, of which they have the option till the 1st of January? The time for decision, is so near, that its consideration cannot be deferred. If that question be decided in the negative, and if the Bonds cannot be sold in open market, then the Government has no resource but to pay its creditors in Demand Notes. Its necessities will imperatively require that these should immediately become the currency of the Nation. The constitutional power of Congress to do this by a law making them a legal tender in payment of debts is believed to be *more than doubtful.*

There is this important point gained in creating such a circulating medium, that if convertible at the pleasure of the holder into Government Bonds in sums of $100 or over, it thereby accomplishes the general distribution of the national debt over the whole country and gives especially to those portions of the people who are deriving benefit from their contracts for army and navy supplies, their proper proportion of the National loans. It also accomplishes the great political result of binding our people and States together, by the additional tie of pecuniary interest.

There are on the other hand the thousand evils of an irredeemable currency, which the Associated Banks have all sought so strenuously to avert.

The most important question now presents itsfelf. *Ought the Associated Banks to receive any irredeemable currency as money, without full provision for its payment?*

It is very clear that this currency cannot be received by Banks under their present legal obligations to treat all credits on their books as expressing an equivalent of coin. Leaving all logical conclusions from this statement undrawn; what will be the situation of the Associated Banks, after commencing to take this currrency?

With One Hundred Millions of Government Loan still on hand, they will possess a strong and undeniable testimonial of patriotic devotion. The paper money which they thereafter receive must largely accumulate on their hands, thus all the while substantially increasing their Government Loans. So long as the Banks in New York receive such circulating notes on deposit, they will remaiu at *par* throughout the country, and those who hold them will naturally seek to secure for them the guarantee of the Associated Banks, by placing them on deposit, and making them the basis of exchange.

The natural course of trade must produce an expansion of credits by the operations of such a currency, and deposits in Banks must largely increase, and be represented in their vaults as Government notes, and on their books as legal obligations.

In the meantime the specie of the Associated Banks which have taken and are now carrying the Government Loans, is rapidly passing into the hands of those who have not shared in this patriotic work; and when a new currency shall flow to New York, in the natural course of trade, the basis on which it rests will be found to be held elsewhere.

Whether the resort by Government to paper money be immediately or re-

(Continued on p. 900.)

RAILROAD SHARE LIST, including Mileage, Rolling Stock, etc., etc.

An *asterick* (*) occurring in the column headed "Rolling-Stock," signifies that the cost is included in that of "Railroad and Appurtenances." A *dash* (—) signifies "nil. Running *dots* (....) signify "not ascertained." Land-Grant Railroads are in "*italics.*"

Years ending.	Railroad. Main Line.	Railroad. Lateral and Branch Lines.	Railroad. 2nd Track and Sidings.	Road in progress or projected.	Equipment. Cars. Engines.	Cars. Passenger.	Cars. Freight, etc.	Companies.	Abstract of Balance Sheet. Property and Assets. Railroad and Appurtenances.	Property and Assets. Rolling Stock.	Property and Assets. Invested in foreign works.	Liabilities. Share Capital paid in.	Liabilities. Bonded and Mortgage Debt.	Liabilities. Floating Debt.	Liabilities. Balance. Total, incl. all other assets and liabilities.	Road operated, incl. road leased, etc.	Mileage run by locomotives with trains.	Earnings. Gross.	Earnings. Net.	Dividends.	Price of shares.

American Railroad Journal.

Saturday, December 28, 1861.

Share and Money Market.

The Share Market the past week has been quiet, with very slight transactions. There appears to be no disposition to move on either side, till the result of the Trent affair is more clearly seen. We do not think that any real apprehension exists of a war with England, but this question is still a cloud upon the market. The public mind is also considerably absorbed in speculations as to the appropriate financial policy of government. The market is to a certain extent awaiting some definite action. The bill just passed increasing duties on tea and coffee, is a step in the right direction. The market at the close of the week was somewhat better. Money is loaned more sparingly without much change of rates. It would be abundant as ever but for the political questions now hanging over the market.

The Boston and Maine Railroad Company have declared a dividend of $3 per share, payable January 1, 1862.

A quarterly dividend of two and and a half dollars per share of the capital stock standing on the books the 26th instant has been declared by the Board of Directors of the Hartford and New Haven Railroad Company, payable on Thursday, the 2d day of January next. Stockholders in New York will receive their dividends at the Union Bank.

The Old Colony and Fall River Railroad Company pay a semi-annual dividend of 3 per cent., 1st Jan.

The Fitchburg Railroad Company has declared a semi-annual dividend of 3 per cent., payable Jan. 1.

The Boston and Providence Railroad Company has declared a semi-annual dividend of 4 per cent.

The Western Railroad Corporation has declared a dividend of 4 per cent., payable Jan. 1.

The Eastern Railroad will pass its January dividend as the receipts the past year have fallen off considerably. The horse railroad to Linn particularly has taken much travel this season. The road has been kept in excellent repair, and the rolling stock is now in good condition. Seventy-five thousand dollars of the debt of the company has been paid off this year, and upon the return of peace and prosperity to our country the road will doubtless again take its place among dividend paying railways.

The Providence and Worcester Railroad Company, has declared a dividend of 4 per cent., payable Jan. 1.

The Connecticut River Railroad Company pay three per cent. on Feb. 1, to holders of stock at close of business on Jan. 18.

The interest on the public debt of Illinois is payable on the first Monday of January at the American Exchange Bank.

The Panama Railroad Company has declared a dividend of six per cent., out of the earnings of the road for the six months ending 31st inst., payable on and after 2d January next.

The coupons of the Jackson County (Ohio) bonds, due Jan. 1, 1862, will be paid at the Ocean Bank after that date.

Income and Expenditures of Great Britain.

Statement of the Gross Public Income of the United Kingdom of Great Britain and Ireland, in the year ending December 31, 1860, and of the expenditure for the same period:

The main line is now in operation to Sedalia, 189 miles from St. Louis. The different sections were completed and brought into use as follows: From St. Louis to Cheltenham 4.75 miles, December 23, 1852; to Kirkwood, 13 miles, May 9, 1853; to Franklin, 37 miles, July 20, 1853; to Washington, 54 miles, February 11, 1855; to Hermann, 81 miles, Aug. 7, 1855; to Jefferson City, 125 miles, March 13, 1856; to California, 150 miles May 14, 1858; to Tipton, 163 miles, July 26, 1858; to Syracuse, 168 miles, August 1, 1859; to Otterville, 176 miles, August 24, 1860; to Smithton, 181.50 miles, November 12, 1860; and to Sedalia, 189 miles, February 1, 1861—leaving a gap of 93 miles, to Kansas City, the terminus. In reference to the progress of the work west of Sedalia the report says:

Pettis County, it will be seen from the records of the Company, modified her subscription, ($100,000), by dividing the payments into four equal annual sums, and in addition subscribed $15,000, to be applied in the construction of the road between Otterville and her eastern line. These modifications and additional aid enabled the Company to open up the road for travel to Sedalia, early in the present year; and Johnson County, in the meantime, so modified her subscription ($225,000) as to enable a portion of the same to be applied outside of her limits, continuing the road westward from Sedalia. With the subscriptions so modified and the other resources of the Company, the directors immediately placed under contract all of the road west of Sedalia, to the line of Johnson County; and as the work in Johnson County from that point had already been contracted, the whole road from Sedalia to Warrensburg, a distance of 30 miles, has been vigorously prosecuted until within a few weeks past, when orders were given reducing the force, and working only at such points necessary to enable the Company to lay the rail without delay in the event of favorable legislation.

The road from Sedalia to Warrensburg, it is believed, could be operated, if the Company were in funds by the first of the ensuing December, but we can promise nothing definite under existing circumstances.

From the terms of the original subscription made by Cass County, the Company were not enabled to obtain the same; but, from a modified or new subscription, the Company has secured $100,000, $50,000 to be applied to the construction of the road, west of and adjoining Warrensburg, and $50,000 adjoining on the west, her own county. The work was placed under contract west of and adjoining Warrensburg, on the 17th of January, 1861, according to the conditions of the subscription, and a small force has been kept at work, so that at this time the whole road is under contract from Sedalia to Holden, in Johnson County, a distance of 44 miles.

From the last annual report it will be seen that Jackson County had made a subscription of $200,000, conditioned that the General Assembly should grant additional aid to the Company in the amount of $1,500,000. The railroad bill having failed from not receiving the executive sanction, the subscription was not available; but by a vote of the people of that county last July, the County Court was authorized to make the subscription of $200,000, conditioned only that the same should be expended in grading the road bed, etc., within her limits. This subscription enabled us to place immediately under contract all the road from Kansas City eastward to Independence, and subsequently to a point six miles east of the last-named place; making in all 18 miles of the road in said county, embracing the heavy work so often referred to in the annual reports of our predecessors.

From the records of the proper office, it will be seen that all of the last named work has been vigorously prosecuted until within the last two months, when we were necessitated to suspend the same, excepting the heavy or difficult section referred to, where a force is still kept, with the view of avoiding delay in the opening of a continuous road, when the Company is in funds. Every effort was made to make available the resources of the Company, to keep this work progressing; and the money institutions of Jackson County were applied to for aid, ample security being tendered; but our solicitations were unavailable, and the grading had to be limited. But it is to be hoped that at an early day the work will be resumed, and the expectations of the people of that county realized, in having the road operated within her own limits. It will be seen, then, from the foregoing, that all of the road yet unfinished has been placed under contract, excepting 33 miles; and if the General Assembly shall adopt some aid or relief that can be made immediately available, the whole work could be resumed and prosecuted with vigor, and the road opened for travel from St. Louis to Kansas City within fifteen months.

The St. Louis and Lexington Railroad Company, since the last annual report, has intersected this road at a point five miles east of Sedalia, known as "Farmers' City," and the Company has entered into a contract, paying a "pro rata" on all the business furnished by them; the same will be found in the proper office of this Company, together with an agreement executed by the proper officers of the two companies, in which this Company is to receive 50 acres of land, at and adjoining the intersection.

In reference to the progress made in the construction of the Southwest Branch, the report says:

From the last annual report it will be seen that this road had been opened to Knob View only a few days before making the same, and during the past year we have been enabled to complete and open to the public 16 miles additional road, to Rolla, in Phelps County, a distance of 114 miles from St. Louis. The graduation is well advanced, and nearly ready for the rail, to a point known as the "Little Piney," and some of the heavy sections beyond have been placed under contract—the work on the two tunnel sections having been vigorously prosecuted. From the financial crisis, so universal, the securities applicable to the construction of this work were depreciated, and an order was issued, as early as last October, directing the suspension of the work.

By the terms of the contract with Messrs. Diven, Stancliff & Co., it will appear that if the work on the road is suspended for the period of six months, then the company is liable to pay the retained per centage, and from the continued depreciation of the "Guarantee Bonds," its is greatly to be feared that no sufficient means will be left to continue the work.

The directors, at an early day, by resolution, called on the stockholders of this road to pay their several subscriptions, but their appeal was unheeded, and no other means were left but the "Guarantee Bonds" to prosecute the work, or to meet the January interest on the securities issued to this road.

The derangement of the finances of the country was felt by this company as early as June last, in the depreciation of our State securities; and rather than sacrifice the bonds to meet the July interest, a loan was obtained and bonds pledged, and the same policy was observed to meet the January interest, and the attention of our successors is especially directed to the obligations of the company becoming due the first of the ensuing April.

As the road progressed it became necessary to provide rolling stock for its exclusive use, and the directors ordered fifty freight and two passenger cars to be constructed at the company's machine shop, twenty-five of the freight cars being at this time in use on the road, and the others in course of construction. There was also four first class locomotives ordered from the "Rogers' Locomotive Works," two of which are now in service on the road, and the remaining two are now on the levee.

From the present condition of the finances of the company and the ignorance of the Executive's intention in relation to the forfeiture of the road, we cannot promise any great progress in its construction, but hope that some way may develop itself to farther its progress to its entire completion.

The equipment of the road consists of 12 passenger and 16 freight locomotives; 21 first class, 5 second class and mail, and 6 baggage and express cars, and 369 cars for freight, etc., also, 21 stationary engines for pumping water, sawing wood, etc.

—Of the floating debt of 1860, $50,618 60 was in the hands of Messrs. Robert Benson & Co., London, applicable to the iron debt—reducing it to $378,139 32, of which $37,508 28 was chargeable to the S. W. Branch. Of the floating debt of 1861, $821,052 is chargeable to the South West Branch, principally for bills payable, given to raise the July and January interest, as the state of the market would not admit of the sale of bonds, except at a great sacrifice; and $88,450 is for accounts audited for contractors west of Jefferson, payable in county warrants and bonds. The floating debt, therefore, for which no provision had been made at the date of the last report, amounted to $265,357 21. The only resources of the company applicable to the reduction of this debt, and the further extension of the road, with few exceptions, were its earnings; and as the first duty of the company was to protect the securities in pledge to Messrs. Levick & Co., and the Ebbrvaile Company, of London, which could only be attained by liquidating the debt, it was paid, and the securities retired and deposited with the treasurer of the company, so that the company has now no foreign debt, and no securities belonging to the main line in pledge.

Corresponding period previous year. 1,663,178 01

The traffic of the Great Western Railway of Canada for the week ending Dec. 20, 1861, was as follows:

Passenger	$14,955 10
Freight and live stock	36,805 36
Mails and sundries	2,249 28
Total	$54,049 74
Corresponding week of last year	36,862 08

Increase $17,187 66

(Continued from p. 893.)

motely probable, is it not wise that the decision respecting it should now be made? and the more so, because the payment of every call of ten per cent. upon their Government engagement, renders the Banks less able to maintain a free choice.

The decision by the Banks to receive such Notes as money, amounts practically to taking so much additional Government Loan at par, and to the certainty of having it more rapidly accumulate in the Banks in proportion as it shall depreciate in public estimation. It amounts to a guarantee by the Associated Banks that the Notes shall be maintained at par throughout the country.

Surely the assumption of such a risk, and the value of such a boon, requires ample compensation. How can that be given?

1st.—By securing from Congress a law indemnifying the Banks from loss for any depreciation in their hands of the loans already taken, and not yet sold.

2d.—By declining to take the Government Notes as money, until the passage of an act furnishing ample guarantees of payment, by a special War Tax, which together with the ordinary sources of Revenue, shall be sufficient to provide: namely,

1st—For the ordinary expenditures of Government.

2d.—To pay the interest promptly on all loans contracted.

3d.—To redeem, say within one year, all the Demand Notes to be issued. Said notes to be in all cases receivable for payments to Government.

* * * * * *

As the Banks now proceed, their Coin is passing into the Treasury to be disbursed in various parts of the country where Government is indebted, and where it will now remain, the exchanges having mainly turned against the Eastern Cities. Our commercial supremacy is therefore passing away as a consequence of our patriotism. Have we not now reached a point where it is wise to measure relative duties and obligations?

* * * * * *

Very Respectfully,
A LOOKER ON.

In this connection we give a communication addressed by the firm of S. Hallett & Co., to the Secretary of the Treasury.

WASHINGTON, *Dec.* 16, 1861.

To THE HON. S. P. CHASE, *Secretary of the Treasury, etc.*

SIR: Agreeably to your suggestion, I take the liberty of submitting some considerations in reference to the means to be adopted to meet the financial wants of Government.

It appears to me that the plan recommended in your late report to Congress, however excellent it may be as an ultimate reform of the currency, will not produce a sum equal to the wants of Government for the remainder of the fiscal year, or say $200,000,000.

As only one State has a well-matured system of free banking, with a circulation secured by a deposit of public securities, the change proposed is radical, affecting the currency and business of the whole country.

Let us see what would be the effect of the plan proposed, put into immediate operation, upon the banks, and upon the industries and trade of the New England States.

The banks of these States have, in round numbers, an aggregate circulation of $50,000,000, with a specie line not exceeding $10,000,000; they can consequently redeem their circulation only by the payment of their bills receivable, discontinuing, in the meantime, their discounts—in other words, by going into practical liquidation. A sudden reduction in their line of discounts, equal to 25 per cent., would bankrupt the greater portion of the trading and manufacturing community. From the embarrassments created by the withdrawal of the currency or circulating medium in use—which to business is the same as the vital air to the lungs—years would be required for such withdrawal, precluding all hope that the measure proposed would be one of immediate relief to Government.

As a condition for resuming business, the banks, with the community greatly embarrassed, and their own resources greatly impaired, would have to deposit with Government, in gold and silver, or their equivalents, in payment for its securities, a sum equal to the notes they might wish to put in circulation—in other words, would have to add to their capitals an amount equal to such currency, which, for the States named, is $50,000,000. At present the security for such a currency, or bills in circulation, are their bills receivable. Will, or could the banks, in their embarrassed condition, caused by the immediate withdrawal of their circulation, add to their present capitals a sum equal to their notes in circulation, without increasing in any degree their profits, except the interest arising from the securities deposited? They could not for years, if they desired to do so, for want of means; and I hazard nothing in saying that the adoption of the plan proposed, provided it could be made obligatory, would compel three-quarters of the banking capital of the country to go into final liquidation, to be followed by wide-spread disaster and bankruptcy, caused by the disturbance of that most delicate of all machinery, the exchanges and circulating medium of the country.

The result of the plan proposed, put into immediate operation, would be similar to that which followed the system of Free Banking, upon a deposit of securities, recently undertaken in the State of Illinois. The Banks there paid as much for their securities as is now asked for those of the United States. But their resources were completely exhausted by the purchase of the securities, leaving nothing for their bills, when presented for redemption. They were consequently forced into liquidation by the sale of their securities. The result would have been the same had the bonds of the United States, instead of those of the States, been deposited with the Comptroller. The trouble did not originate from the nature of the securities, but from the fact that a capital double that of most of the other States, was required for the system inaugurated in Illinois. The West is not yet rich enough for such a system; nor can it be made immediately to take the place of that now existing throughout the country.

It is proposed, in a period of civil, and threatened foreign wars, and when the operations of commerce and trade are greatly disturbed, and confidence shaken, to abrogate, within the short space of a few months, a system which has been in use since the foundation of the Government—a system by which the business operations of the country for the last thirty years have been exclusively carried on; which has become thoroughly identified with the interests and habits of the people, and from which nearly all the States derive large revenues. Nothing is more certain than such attempted abrogation will be regarded as an attack upon a great interest of the country, highly disastrous and destructive, if successful, and will be resisted by the several States, and the people as far as such resistance can be made in the courts of law; or by the refusal of the Legislatures of the States to second the recommendation or enactments of the Federal Government. Assuming that all the questions raised will be settled in favor of the Government, will not the time required be such as to preclude the possibility that the plan proposed can be made immediately available to its wants? If not, is it wise at such a juncture, to array against the Government the very parties upon whom it must rely for support?

I think the action of the Banks, in negotiating the loans already taken, will prove to have been most unwise and unfortunate, unless followed by some scheme or plan of finance which shall leave their capitals unimpaired, by enabling them to sell the securities which they, as the representatives of the capital of the country, or the financial agents of the Government, may, from time to time, contract to take. On no account should they put such portion of their capitals into Government securities as will preclude their extending all needful assistance and accommodation to the business operations and industry of the country. Just in proportion as these flag, or are embarrassed, does production cease, and the ability of the country to carry on the war be weakened. Its cost is not so much against the past, as the future earnings and accumulations of the country. Let the Banks remain in position to sustain and support its industries, and we need have nothing to fear. But if the former are crippled, the others are destroyed. It would not be wise to sell and convert to other uses, the machinery of our Railroads to meet a present emergency. It would be equally an act of national suicide for the Banks to convert their capitals into twenty-year government bonds.

* * * * * *

In every point of view, I think the immediate adoption of the plan proposed would be most disastrous. In regard to the alternatives to be resorted to, I do not feel warranted in obtruding an opinion. Any plan, it strikes me, to place the national finances upon firm ground, must provide for an annual revenue of at least $150,000,000 or $200,000,000 from impost and excise duties and taxation. The levying of such duties and taxes would at once lay the basis for an immediate issue and circulation of Government notes to an equal amount. The means derived from such sources, with such as might be obtained from sales of Government bonds, on a long time, would, I have no doubt, carry the Government successfully forward, till the expenditures reached the amount estimated in your report up to the close of the fiscal year of 1862–3.

I have the honor to be your obedient servant,

———

(From the C., E. and A. Journal.)

Suspension Girder Bridges for Railway Traffic.

(Continued from p. 839.)

Let us now pass on to the consideration of the condition which imposes the severest possible strain upon the suspended girder, namely, the distribution of a load over half the girder next one tower. Here we have no experiments recorded that supply any check to theoretical calculation. We may however the less regret the omission, when we find that the condition just supposed is the one in which the problem assumes its very simplest form.

We have already presented the result of the investigation of the effect of the concentrated weight w placed on the suspended girder, at a point whose distance d from the centre bears to the entire span s the ratio $\frac{d}{s}=r$. We found that the load thrown on the chains would be

$$\left(\frac{25}{16}-\frac{15}{2}r^2+5r^4\right)\times w;$$

and thence deduced the ordinate of the reflex wave. If for a concentrated load at one point we substitute a load equably distributed between two points (at the respective distances $d=rs$, and $d_2=r_2s$, from the centre), the rate of loading per foot forward being denoted by m, the load thrown on the chains will be readily found by integration to be equal to the following expression:—

Load on chains =

$$\left(\frac{25}{16}(r_2-r)-\frac{5}{2}(r_2{}^3-r^3)+r_2{}^5-r^5\right)\times ms.$$

And when one half-span is equably loaded, and the other half-span not loaded—that is to say, when $r_2=\frac{1}{2}$ and $r=0$, we find that Load on

$$\text{chains}=\left(\frac{25}{16}\times\frac{1}{2}-\frac{5}{2}\times\frac{1}{8}\times\frac{1}{32}\right)\times ms=\frac{ms}{2},$$

which is exactly the amount of the load distributed over the half-span of the girder.

A load therefore, say of 100 tons, distributed over half the span of the suspended girder, induces an upward reaction in the chains equal to 100 tons distributed over the whole span. The unloaded half of the girder will therefore have to sustain an upward distributed pressure (from the chains) equal to 50 tons; the loaded half of the girder will have to sustain the difference between its load of 100 tons and the upward reaction of the chains, which will be 50 tons: this difference amounts to 50 tons, and is the net downward distributed pressure on the loaded portion of the girder.

It is therefore obvious that, apart from the stretching of the chains, the suspended girder will in this case assume a perfectly symmetrical S curve; the upward flexure of the unloaded half of the girder being exactly similar and equal to the downward flexure of the loaded half. The same result is arrived at by combining the simple wave of deflection with the reflex wave.

It thus appears that *for a bridge of a single span only*, the greatest strain which a given rolling load can throw on the suspended girder is $\frac{1}{8}$th of the greatest strain which it would throw on an ordinary girder not suspended.

Take, for instance, a bridge of 400 feet span, with a rolling load of 1 ton per foot forward. For a common girder bridge the greatest strain will be that which is sustained at the centre when the whole bridge is loaded; and will be represented by the product of 400 (the load in tons), and 50 (the eighth part of the span). This product is 20,000. For a suspended girder the greatest strain will be that which arises at the quarter-span, when the half-span is loaded. The rolling load is in this case 200 tons; but as the upward reaction of the chains distributed over the half-span is 100 tons, the load sustained by the girder is only 100 tons. The strain will therefore be represented by the product of 100 (the virtual load in tons), and 25 (the eighth part of the half-span). This product is 2,500, which is $\frac{1}{8}$th of 20,000, the greatest strain on the simple girder bridge.

We have hitherto postponed the consideration of the stretching of the chains when the rolling load comes on the bridge, and the consequent depression of the reflex wave. Let us suppose a uniform elongation of the chain, at the rate $1:1+e$; and s being the span, let v be the rise of the curve of the chains; then $\frac{25e}{32}\left(\frac{s^2}{4v}+\frac{4v}{3}\right)$ is the expression for the settlement at the half-span due to the assumed amount of stretching of chain; and this will be the consequent diminution of the sagitta of the reflex wave.

The rise or fall of the girder occasioned by the contraction or expansion of the chains on change of temperature is expressed in a form identical with the proceding; and the consequent strain on either flanch of the girder can be readily computed when the depth of the girder is known. And when the section of the girder is known, it will be easily ascertained what amount of additional load is thrown upon it, from the deflection attending the stretching or the expansion of the chains.

In brief, for a bridge of a single span, the section of the suspended girder should be calculated to give $\frac{1}{8}$th, not of the entire strength of a simple bridge girder for the same span, but of so much only of its strength as is assigned to the support of the maximum rolling load. This distinction is one of great moment where heavy spans are encountered, and indicates the extreme economy of the suspended girder in such cases. All the fixed dead weight, inclusive of the weight of the girders themselves, is carried by the chains; with the exception that, when these expand or are stretched, a small distributed load is thrown on the girders. A *small* distributed load, because a girder of the proportionate strength required, and of a depth from one-third to one half of the rise of the chains, will readily rise and fall to the necessary extent, without sustaining much strain. The girders could, moreover, be strained up to a camber, in fixing, so as greatly to reduce the downward strain resulting from the elongation of the chains.

As an illustration of this, let us suppose that the chains of a bridge of 400 feet span have a rise of 50 feet, and carry a girder of such rigidity that a distributed load of 50 tons would cause it to deflect 10 inches, were the support of the chains withheld. If a rolling load of 400 tons, covering the whole bridge, causes the chains to stretch $\frac{1}{2000}$th part of their length, the resulting deflection will be 4 inches; but the girder in deflecting 4 inches has a distributed load of only $\frac{4}{10}$ths $\times$ 50, or 20 tons, thrown upon it, leaving 380 tons as the share of the rolling load sustained by the chains. And were the girder strained up in fixing to a 4 inch camber (representing an upward pressure of 20 tons), the effect of the stretching of the chains would be simply to release the girder from its forced camber, so as to leave it free from strain when the bridge is covered with its maximum rolling load.

Apart from the deflection or settlement alluded to, the maximum rolling road will cause an extreme deflection at the quarter-span, equal to $\frac{1}{32}$ of the deflection which would take place at the centre of the same girder, under the same rolling load, without the chains; or about $\frac{1}{4}$th of the extreme deflection of an ordinary girder bridge of the same span and same depth of girder.

The case of the suspended girder, for a single span, having been thus far investigated, we may proceed to examine how the conditions become modified when there are more spans than one. If we suppose that, of two adjacent spans, one is loaded and the other not, we find that the chains on the opposite sides of the intervening pier will in the first instance be in very unequal states of tension, and that the one chain must sink and the other rise, until the equilibrium of tension is restored. This is presuming that the chains are connected, as is usual, by means of a saddle placed on rollers, so as to admit of such adjustment, and relieve the pier of any horizontal strain.

The necessity of this or some horizontal precaution, becomes manifest when we consider the nature of the horizontal strain that would otherwise be thrown on the pier or tower intervening between an unloaded and a loaded span. Take for instance two adjacent spans, each of 400 feet, of which one has only its fixed dead load, while the other is covered by a rolling load of 400 tons. If the rise of the chains be 50 feet, the horizontal tension of the one pair of chains will exceed that of the adjacent pair by 400 tons; so that, if the summits of the chains were made fast to the top of the tower (instead of being allowed to slide upon it), the tower would have to sustain a horizontal pull of 400 tons, tending to draw it over into the loaded bay. Could an ordinary pier be trusted to sustain a strain of this nature and magnitude, the foregoing part of our inquiry would be as applicable to bridges consisting of two or more, as to those of a single span; but prudence is generally considered to demand the exemption of masonry piers from such a formidable horizontal strain. Where iron is substituted for masonry, and a very extended base given, the towers might possibly be made to sustain a strain of this nature, But in such a case the summits of the towers would cease to be absolutely dead points, since unequal compression in the iron would inevitably cause a slight horizontal deflection towards the more heavily loaded span. This deflection, or swaying, of the tower, if only a few inches, would cause such a deflection in the loaded girder as we wish to avoid. We may therefore pursue our investigation into the case of two adjacent spans unequally loaded, the chains being allowed free play on the top of the intervening pier.

The function of the suspended girders will now be to equalize the strain on the chains, so as to insure equilibrium, before the deflection of one span and the drawing up of the other (which without the girders might be objectionably great) exceed some small fixed limit. If therefore, one span being unloaded, the adjacent span is covered with a rolling load of 100 tons, the action of the girders must be such as to throw a distributed load of 50 tons on each set of chains. The girders of the loaded span will therefore have to sustain a sensible load of 50 tons, the remaining 50 tons of rolling load being borne by the chains. At the same time, in the unloaded span, the reaction of the chains will distribute an upward pressure of 50 tons over the girders. These results will of course be modified by the stretching of the chains, which will diminish the rise in the one span, and increase the deflection in the other. It is perhaps hardly necessary to remark, that as the waves in the adjacent spans are of opposite kinds, they will in no way be affected by continuity in the girders.

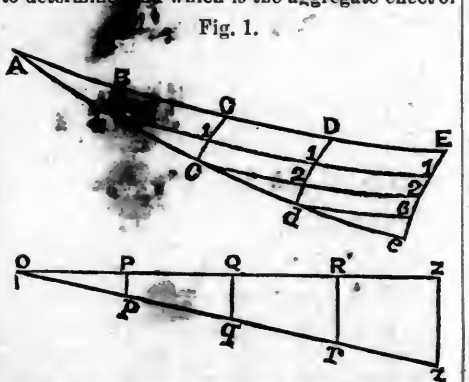
For a suspension bridge of more spans than one, designed for railway traffic, it therefore appears essential to provide girders capable of sustaining a distributed load equal to half the maximum rolling load. These girders should not be of a depth exceeding from one-third to one-half the rise of the chains. For large spans—and it is for large spans only that a suspension bridge would be constructed to carry railway traffic—these girders, having to support neither their own weight, nor any other portion of the dead load, but simply half the maximum rolling load, will be light in comparison with the girders for an ordinary bridge of equal span. They will be sufficiently flexible to follow the rise and fall of the chains; never ceasing to be truly *suspended* girders, at the same time that they possess rigidity enough to distribute any partial load equably over the chains, and to keep the wave caused by the rolling load within moderate and safe limits.

After what has been said, it is obvious that the economy of the suspended girder is greater for a single span than for a bridge of more spans than one, since the girder in the latter must be four times as strong as that in the former. The deflection in the bridge of one span only will (as we have seen) be one-fourth of the deflection of an ordinary girder bridge of the same span and same depth of girder; while in the multiple span bridge the deflection becomes equal to that of the ordinary girder bridge. The deflection in each case has, however, to be increased by the amount of

settlement due to the stretching of the chains when the maximum rolling load traverses the bridge.

On examining the expression for this settlement, which has been already given as $\frac{25e}{32}\left(\frac{s^2}{4v}+\frac{4v}{3}\right)$, we find that it diminishes as the rise of the chains increases; reaching a minimum when the rise of the chains equals the altitude of an equilateral triangle having for its base half the span of the bridge. By giving a considerable rise to the chains, we therefore effect a saving of strength, and thus of material, not simply in the chains themselves, but also in the suspended girder, by reducing the strain on the latter resulting from settlement.

It may be as well before dismissing the subject, to add a word or two on the resistance offered by the chains *per se* to an irregular displacement, and the amount of error involved at the outset of this inquiry in neglecting this element of stability; and considering the *form* of the reflex wave as entirely governed by the law of the girder, while its *magnitude* depends on the law of continuity of the chains. If we take the same example as before, viz: a bridge 400 feet span, 50 feet rise of chain, and a dead load of 300 tons, inclusive of weight of chains and girder; and suppose a weight of 1 ton placed at the quarter-span; the chains over the same point would be drawn down about 1 inch, if there were no girder. But if we take the girder (of the same strength as calculated before for the single span), we shall find that it will take a weight of more than 5½ tons at the quarter-span to cause an inch deflection, without the chains. In this case, therefore, the resistance of the chains to a small displacement would be about 18 per cent. of that of the girder, and would tend to reduce the wave calculated on the preceding principles by a like per centage. But there is also another consideration to be taken into account, operating the other way. When the rolling load comes on a bridge the added strain will cause the stay-chains to stretch, and this will occasion an increase in the deflection of the bridge. There are thus two causes, one of diminished, the other of increased disturbance, which to some extent counteract one another, and which are not reducible to a general rule, as they vary with the conditions of each bridge. Their operation therefore has to be specially calculated, and allowance made for them, when applying the results of general theory to any particular case.



It must be borne in mind that the displacements we have been investigating are *very small*, consisting of inches, where the span consists of hundreds of feet. The resistance of the chain rapidly increases when the displacements become large enough to cause an appreciable alteration in the rate of curvature of the chain. In this respect the chain has a very different law from the girder. If a load of 50 tons deflect a girder 10 inches, we may expect a deflection of 1 inch for a load of 5 tons. Not so with the partial displacements of a chain. If 50 tons caused a displacement of 20 inches, it would by no means be a just inference that 5 tons would cause a displacement of only 2 inches. Thus, in a model in which the wave is greatly magnified, and especialy when there is a large distributed dead load on the platform, the action of the chains in reducing the wave will be proportionately much greater than in the actual bridge. As we have already seen, the wave in Mr. Barlow's model is in each instance less than theory would indicate; and the more so as the stiffness of the girder is reduced, or the distributed dead load increased. The consideration just adduced furnishes a clue to this discrepancy.

While therefore the strength of the chain is sufficient to carry a load that would prove distructive to the girder, if not suspended, the resistance of the girder to small partial displacements is far more powerful than that of the chain. For the strength of the girder consists in its rigidity; whereas the equilibrium of the chain is dependent on its readily adapting itself to any particular curve required by the distribution of the rolling load at a given moment. The suspended girder, by virtue of its rigidity, transmits a partial load to the chain in the form of an equally distributed pressure. Thus the girder preserves the equilibrium of the curve of the chain, while the chain furnishes the ultimate support of the whole, or nearly the whole, of the load.

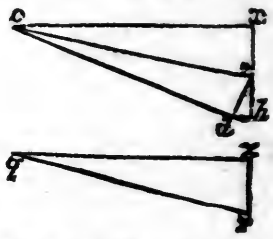
It is perhaps due to the reader to explain how we arrive at the general expression for the horizontal displacement resulting from the deflection, or the pulling up, of a chain; the more so, as it forms, in fact, the basis of the whole of the foregoing investigation. The general expression referred to is $\int \frac{dy}{dx}.dz$, given *ante* p. 318 (293 *Journal*).

In fig. 1, A B C D E represents part of a chain in its original position, and A *b c d e* is the same chain after displacement; the point A is supposed to be fixed. 0 z being a horizontal line, o *p q r z* is the curve of the vertical displacements of the chain, the ordinate P *q* being equal to the difference in height between B and *b*; the ordinate Q *q* to the difference in height between C and *c*, and so on. The displacements are supposed to be small, although in the diagram it is necessary to make them large, for the sake of clearness. The length of chain A *b* is equal to A B, *b c* to B C, and so on to *e*. Each length of the chain except A B undergoes at once a change of *place* and a change of *direction*. The change of place is again resolvable into *vertical* displacement, which is already plotted in the ordinates of the curve o *z*; and *horizontal* displacement, which is what we want to determine, and which is the aggregate effect of

Fig. 1.

the changes of position of the successive lengths of chain. It will assist the understanding if we distinguish between the change of place and the change of direction, by considering them as successive instead of simultaneous.

First, then, A B assumes the position A *b*. The necessary result is a change of position of the remainder of the chain B C D E to *b* 1 1 1; the points C, D, and E taking a parallel motion equal to B *b*, as indicated by the dotted lines C 1, &c., so as to produce change of place without change of direction.



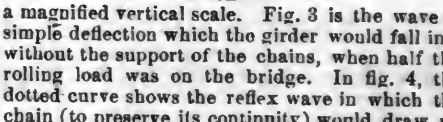
Next, let B C, after moving as we have seen to the position *b* 1, undergo its change of *direction*, assuming that of *b c*. C D E will now sustain a second change of place, viz: from 1 1 1 to *c* 2 2, the dotted lines 1 2 (indicating the path of this movement) being equal and parallel to 1 *c*.

The next step is for *c* 2 to fall into its new diriction, *c d*; this will be attended by a parallel movement of 2 2 to *d* 3. Lastly, *d* 3 assumes its ultimate direction, *d e*.

By thus laying down the paths, E 1 2 3 *e*, D 1 2 *d*, &c., in which the various points in the chain may be supposed to travel to their new positions, it is rendered obvious that the displacement of E, both vertical and horizontal, is the sum of the effect of the changes of *direction* of the several lengths of chain. So that if we find the horizontal movements given by the change of direction of A B, B C, &c., and add them, the sum will be the amount of horizontal displacement at *e*.

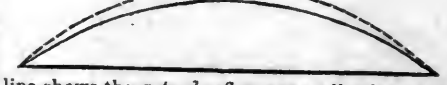
Fig. 2 gives an enlarged view of a length *c* 2 of the chain, and its movement to its ultimate direction, *c d*; *q r* is a corresponding portion of the curve of deflection. *x* and *y* being the horizontal and vertical ordinates of the point *c*, as measured from some fixed centre or origin, *c x* in the dia-

Fig. 2.



gram will be the differential of *x*, and *x* 2 the differential of *y*: *r z* will be the differential of *z*, and will be equal to the element (*h*2) of vertical displacement.

If *c* 2 *d* were a right angle, the right angled triangles *d h* 2, 2 *x c*, would be similar to one another; but as the angle 2 *c d* is supposed to be very small indeed, the error resulting from considering *c* 2 *d* as a right angle is too small to be of any account. We may therefore regard the triangles *d h* 2, 2 *x c*, as absolutely similar. It results from their similarity th $\frac{dh}{h2}=\frac{2x}{xc}$; and therefore $d\,h=\frac{2x}{xc}\times h2$. That is to say, the differential of horizontal displacement (*dh*) is equal to $\frac{\text{differential of } y}{\text{differential of } x}\times$ differential of *z*. The sum of the horizontal differentials of displacement from A to E (fig. 1) will therefore be equal to $\int\frac{dy}{dx}.dz$, between the same points; so that this expression gives—with a minute error—the actual horizontal displacement of *e*.



We add by way of illustration three figures, to

Fig. 3.

a magnified vertical scale. Fig. 3 is the wave of simple deflection which the girder would fall into without the support of the chains, when half the rolling load was on the bridge. In fig. 4, the dotted curve shows the reflex wave in which the chain (to preserve its continuity) would draw up the girder, were it not for the stretching: the full

Fig. 4.

line shows the *actual* reflex wave, allowing for the stretching. Fig. 5 exhibits the compound wave which results from the simultaneous action of the wave of deflection in fig. 3 and the reflex wave in fig. 4. The dotted line shows the equal rise and

Fig. 5.

depression which would take place if the chains did not stretch: the full line shows the actual result after the settlement of the chains.

We have now accomplished the object proposed in this article, by briefly indicating the steps by which an intelligible and consistent theory of the suspended girder may be arrived at; comparing its results with those obtained by Mr. Barlow from his experimental model; and pointing out those practical conclusions which seem most obvious or most important. We refrain from inquiring into the sufficiency of the girder proposed by Mr. Barlow for the multiple span bridge at Londonderry, as such inquiry would not come within our present

scope. The application of the principles attempted to be laid down to the examination of this or any similar case would, however, be very readily made, provided the section of the intended girder were given. The conclusion that immediately concerns us is the practicability of the suspended girder for railway bridges of heavy spans; the marked economy, moderate deflection, and perfect safety of bridges constructed on this plan; and the proportions and other conditions to be observed. Experiment and theory have now done their part. Each involve some known, and possibly also some unsuspected, sources of error. It remains for the practical engineer, by the bold test of some actual work, at once to correct and verify the conclusions of abstract science, and remove the question for ever from the province of discussion.

Wisconsin $1,000,000 War Debt,

AUTHORIZED BY THE LEGISLATURE AT ITS EXTRA SESSION, 1861.

Description of Securities.	Amount issued.	Interest. Rate.	Interest. Payable.	Principal Payable. When.	Principal Payable. Where.

To the 30th September, 1861, there have been sold:

5 bonds of $100 each for	$500				
90 bonds of $500 each for	31,920				
794 bonds of $1,000 each for	555,800				
Total amount realized	$588,220				
The receipts and disbursements of the war fund were:					
Receipts	$818,758 56				
Disbursements	791,875 92				
Balance September 30, 1861	$26,882 64				

SANFORD'S
MAMMOTH
OR
GLOBE
HEATERS.

The best stoves for RAILROAD DEPOTS and SHOPS, and all places where a great heat is required. They are very durable, and very economical of coal.

Beware of imitations that are inferior in strength and in other respects.

TESTIMONIALS.

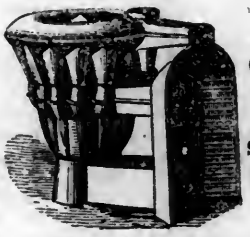
HUDSON RIVER RAILROAD OFFICE, N. Y

This Company have now in use, over two hundred of Sanford's Mammoth Heaters, in Station Houses, Work Shops, and Engine Houses; we commenced using them in 1853, and some of the first stoves put up are still good and in use. We consider them the best Heaters now in use.

J. M. HEBARD, Supply Agent.

UNION FERRY COMPANY.

The Mammoth Heaters have been used by this Company in their waiting rooms at the several ferries and found to be very excellent stoves and more durable and valuable than any heretofore used. CYRUS P. SMITH, Managing Director.



MANUFACTURED AND SOLD BY
SANFORD, TRUSLOW & CO.,
Nos. 239 and 241 Water street, New York,

ISAIAH W. SYLVESTER,
ATTORNEY AND COUNSELLOR AT LAW,
Law Reporter for the "American Railroad Journal,"
No. 8 WALL STREET, NEW YORK.

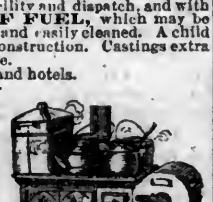
Sanford's
CHALLENGE
HEATERS
SET IN BRICK,
PORTABLE
OR AS
FIRE PLACE
HEATERS,
FOR WARMING BY ONE FIRE
WITH PURE, SOFT AIR
Dwellings, Churches, Hotels, Public Halls, Railroad Depots, Vessels, etc.,
WITH AND WITHOUT REGISTERS.
THE MOST POWERFUL HEATERS
AND THE
Greatest Fuel Saver in the World:
With an unparalleled record of unimpeachable testimony from Citizens, Ministers, Doctors, Lawyers, Merchants, Mechanics and others.

Send for pamphlet containing full information and testimonials.

SANFORD, TRUSLOW & CO.,
Nos. 239 and 241 Water st., N. Y.



Challenge Air-tight
KITCHEN RANGES,

May be placed in a fire-place without masonry, and with or without water-back; or may be set out on feet, as an ordinary stove.

This range, already very popular, has the LARGEST OVEN of any in the market; BAKES PERFECTLY, never burning to brown at the bottom; BOILS, ROASTS and BROILS with unequalled facility and dispatch, and with extraordinary ECONOMY OF FUEL, which may be either coal or wood. Flues large and easily cleaned. A child can manage it, so simple is its construction. Castings extra heavy, and design plain and chaste.

Four sizes, adapted to families and hotels.

Beacon Light
SUMMER AND WINTER
PORTABLE RANGE,

Is a very popular range, having six boiler holes, one large oven that bakes perfectly, with an arrangement for roasting, or heating irons at the end. It is very economical of fuel. For a FEW DOLLARS a family may be supplied with a PERFECT COOKING APPARATUS, equal to the highest price stove in the market.

Three sizes, adapted to coal, or wood.

SANFORD, TRUSLOW & CO.,
239 and 241 Water st., N. Y.

The COSMOPOLITE
PARLOR RADIATOR, &
GAS BURNER,

Introduced one year ago, already ranks as the LEADING STOVE for PARLORS, SITTING ROOMS, and all places where a simple pleasant heat is desired.

Fire may be kept all winter with an astonishingly small supply of coal.

Send for description and testimonials.

SANFORD, TRUSLOW & CO.,
Nos. 239 and 241 Water st., N. Y.

PASCAL IRON WORKS,
ESTABLISHED 1821.
MORRIS, TASKER & CO.,
MANUFACTURERS OF

Lap-Welded American Charcoal Iron Boiler Flues—from 1½ to 10 inches outside diameter, cut to definite lengths.

Wrought Iron Welded Tubes—from ¼ inch to 8 inches inside diameter, with screw and socket connections, for Steam, Gas, Water or other purposes; also, fittings of every kind to suit the same.

Wrought Iron Galvanized Tube—strong and durable, designed especially for water purposes.

Cast Iron Gas or Water Pipe—1½ to 24 inches in diameter, and branches for same, etc.

Gas Works Castings, etc., etc.

PHILADELPHIA.

OFFICE OF THE ILLINOIS CENTRAL R. R. Co.,
New York, Dec. 5, 1861.

AT a meeting of the Board of Directors of the ILLINOIS CENTRAL RAILROAD COMPANY, held at their office in New York this day, it was

Resolved, That an assessment of FIVE DOLLARS per share upon the Scrip Shares of the Capital Stock of the Company, be and the same is hereby called payable on the twentieth of January, 1862; and that the same be payable on the Stock registered in the City of New York at the office of the Company in that city; and on the Stock registered in London at the office of Messrs. ROBERT BENSON & Co., London; and that parties desiring to pay their assessment in London, may pay the same at a rate of exchange sufficient to produce five dollars per share to the Company in the City of New York.

Resolved, That the transfer books be closed on the afternoon of the 15th January next, and re-opened on the 20th day of the same month; and that no transfer be permitted, on or after that day, of shares upon which the foregoing assessment shall not have been paid.

THOMAS E. WALKER, Treasurer.

The eighty-dollar certificates to be returned on payment of the above.

OFFICE OF THE ILLINOIS CENTRAL R. R. Co.,
New York, Oct. 29, 1861.

HOLDERS of the stock of this Company, as registered upon the books of the company at the close of business on the 15th day of January, 1862, will be entitled to Canceled Bonds Scrip for five dollars upon each share of stock held by them deliverable on or after the 1st day of February next; and parties holding certificates are hereby notified to have the same registered in their own names on or before the said 15th day of January. 48

LOCOMOTIVE FOR SALE.

SMALL second hand Locomotive, usual gauge (4ft. 8½ in.) Weight, 10 tons—Drivers, 4ft. 6 in.—Cylinders 10x18 in. Fire-box, Crank and Tires nearly new, and the whole engine in excellent condition.

Also a second hand "Bradly" Snow Plow.

For sale low by
WILLIAMS & PAGE,
51 Boston.
